

### **DAIKIN**

Marine type Container Refrigeration Unit

Service Manual

# LXE10E100 or later (DECOS II e)

DAIKIN INDUSTRIES, LTD.

TR 08-03B

Please read the contents of this manual prior to operation of the unit.

This booklet will provide you with the minimum necessary information required to operate the Daikin refrigerated unit LXE10E100 or later equipped with the new controller DECOS III e. It covers all of the unit's functions from basics such as the names of components, how to turn on the power supply, or change a setting temperature, to describing functions of product and maintenance service.

In addition, refer to the manuals listed below will be issued soon.

- Parts List
- Operation Manual of Personal Computer Software

The English text is the original instruction. Other languages are translations of the original instructions.

### **SAFETY PRECAUTIONS**

Always observe the following points before operating or inspecting a unit.

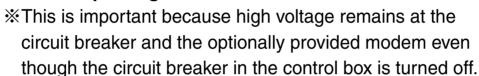

### DANGER

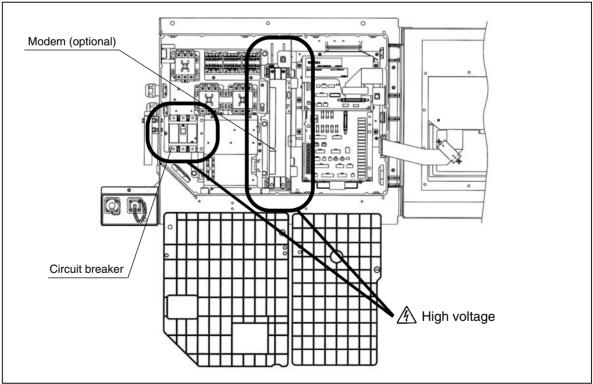

Always shut off the main power supply of the facility before disconnecting the power plug.

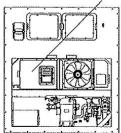

Always turn off the main power supply of the facility before inspecting the interior of the control box.

### **MARNING**

### Do not touch the condenser fan while power to the unit is ON.

Before removing the condenser fan cover, turn off the circuit breaker and disconnect the power plug.

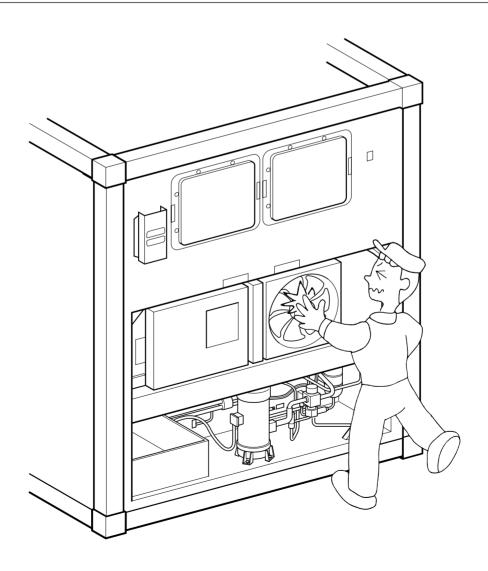

During air-cooled operation : Condenser fan may start

and stop automatically for

the refrigerant high pressure control.

During water-cooled operation: Condenser fan may start

and stop automatically for cooling of the control box.

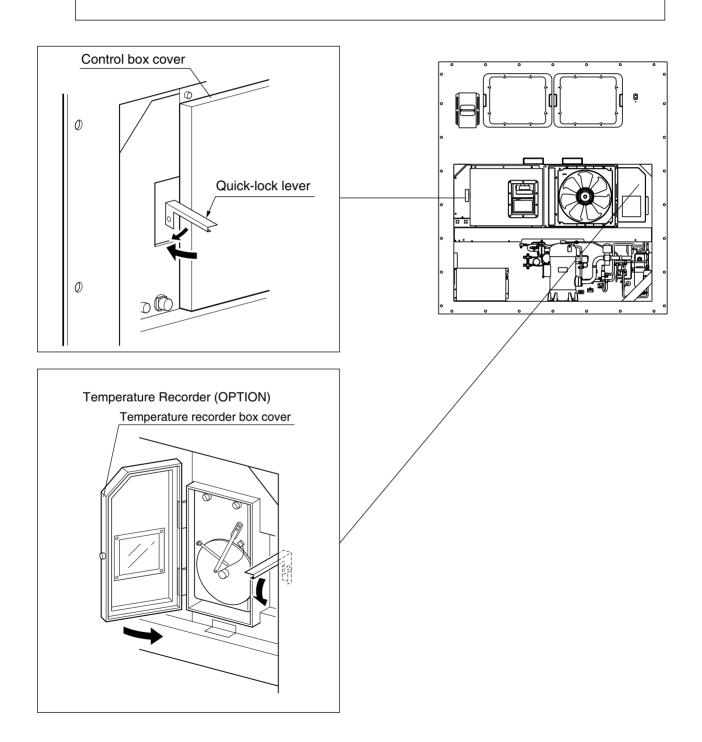

### **CAUTION**

Before starting the unit, run the generator.

Securely close the control box cover.

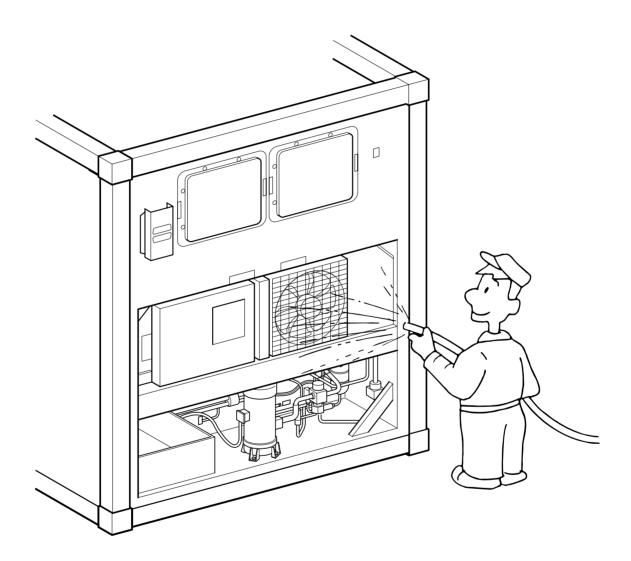

Otherwise, it will allow water entry.

### **⚠** CAUTION

#### Wash the refrigeration unit with fresh water at PTI.

1. Carefully flush the external condenser with fresh water to remove the salt that sticks to it.

2. Corrosive gases generated from the cargo may corrode the copper pipes and aluminium fin of the internal evaporator. Therefore, wrap up the cargo properly to prevent such corrosion.

Major corrosive gases include chlorine, ammonia, sulfuric acid, acetic acid, sulfur dioxide etc.

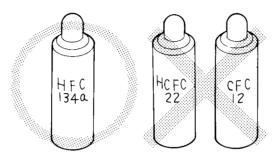

### **⚠** CAUTION

#### Refrigerant and refrigerant oil

Be sure to only charge the unit with refrigerant HFC 134a.

Never attempt to use any other refrigerant (CFC12, HCF22, etc) with the refrigeration unit.

If any other refrigerant not specified is charged, it may cause problems with the unit.

### Use only Daikin specified refrigerant oil (IDEMITSU, Daphne Hermetic Oil FVC46D).

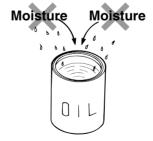

If any other refrigerating machine oil not specified is charged, it may cause problems with the unit.

Open the oil can, just before charging the oil, and use all the oil in the can once opened.

Do not leave the can open for 5 hours or longer to avoid moisture entry.

Using any refrigerant oil which has absorbed moisture may cause problems with the unit.

### Use only exclusive tools for HFC134a. (gauge manifold, etc) Do not use any tools for CFC12 or HCFC22.

Service ports with exclusive quick joints for HFC134a are provided in the refrigeration unit to avoid improper refrigerant or refrigerant oil from entering into the refrigeration circuit. (Refer to clause 4.1.2)

The charging hose and gauge port are not interchangeable with those of previous models using other refrigerants.

### CLASS 1 PRODUCT SPECIFIED BY THE LAW CONCERNING THE RECOVERY AND DESTRUCTION OF FLUOROCARBONS OF FLUOROCARBONS

HFC IS USED FOR THIS PRODUCT AS A REFRIGERANT.

- (1) EMISSION OF FLUOROCARBONS INTO THE ATOMOSPHERE WITHOUT PERMISSION IS PROHIBITED.
- (2) RECOVERY OF FLUOROCARBONS IS MANDATORY WHEN SCRAPPING AND SERVICING THIS PRODUCT.
- (3) THE KIND OF FLUOROCARBON AND ITS AMOUNT ARE STATED IN THE MANUFACTURER'S LABEL OR THE ADDITIONALLY CHARGED AMOUNT LABEL.

#### Important information regarding the refrigerant

This product contains greenhouse gases covered by Kyoto Protocol. Do not discharge refrigirant into atmosphere.

Refrigerant type: R134a GWP (1) value: 1300

(1) GWP=global warming potential

The refrigerant quantity is indicated on the unit name plate.

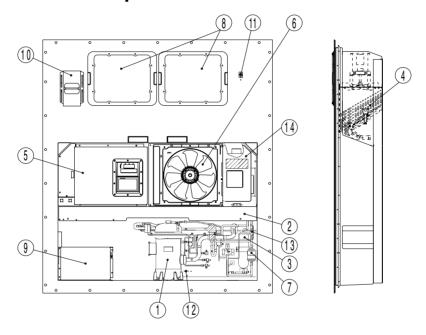

#### 1. INTRODUCTION

### 1.1 Operation range

Use the units within the following range.

Item	Operation range	
External temperature range	-30°C to +50°C (-22°F to + 122°F)	
Internal temperature range	-30°C to +30°C (-22°F to + 86°F)	
Voltage	50Hz: 380V/400V/415V, 60Hz: 440V/460V Voltage fluctuation rate should be within ±10%	
Vibration and shock	Horizontal: 5G, Vertical: 2G	

#### 1.2 Basic names of components

- Compressor
- Air-cooled condenser
- 3 Receiver
- **(4)** Evaporator
- Control box

Outside: switch, manual defrost switch, monitoring receptacle Inside: circuit breaker

- Air-cooled condenser fan
- (7) Drier

- Access panel
- Storage space for power cable
- 10 Ventilator

12

Thermometer check port (optional)

inside return air temperature. Gas sampling port This is used to measure the Sampling port (Supply) inside supply air temperature and inside CO2 concentration.

Use this port to measure the

- Liquid moisture indicator
- Recorder (optional)

### 1.3 Basic operation of refrigeration unit

#### 1.3.1 Starting operation

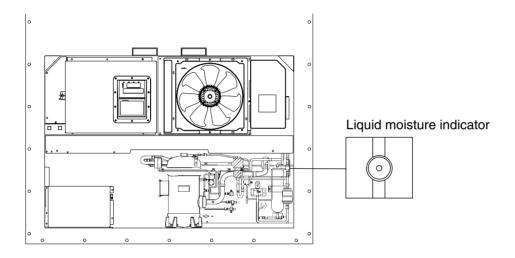

(1) Connect the power plug to the power supply.

Insert the plug ① suited to the power source voltage, and fasten the plug firmly.

(2) (2) Turn on circuit breaker ② after checking that the power supply switch is turned on (Outside of the unit). (3) Close the control box cover. Ensure that the one-touch lever is firmly closed. Control box cover Quick-lock lever 0 (4) Press the UNIT ON/OFF key 3. DISPLAY SELECT -(3) Μ

#### 1.3.2 Check items during operation

Check items(precautions)	Method of check
1. Check the compressor, fan, pipes, etc. for abnormal	Visual and sound check
noise and vibration.	
2. Check the refrigerant for shortage.	Visual check by using the moisture indicator
Check for excessive charge.	For the details, refer to clause 4.2.15.
3. Check the refrigerant for moisture inclusion.	Visual
[When the moisture indicator is exposed to gas	The moisture indicator colour;
refrigerant during prolonged stop periods, it may turn	Green: normal
yellow. This is not abnormal.]	Yellow: abnormal.
4. Check if the recorder is working according to the inside	Visual
temperature.	
5. Check operating conditions using the control panel.	Visual

#### 1.3.3 Procedure after operation

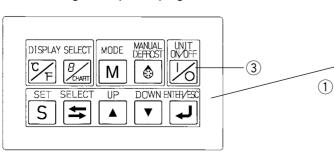

(1) Turn off the UNIT ON/OFF key ③, and turn off the circuit breaker ②.

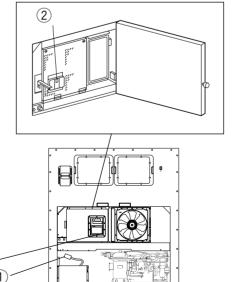

#### (2) Close the control box cover.

Ensure that the one-touch lever is firmly closed.

#### (3) Stow the power cable.

Disconnect the power plug ①, and stow the power cable directing the plug opening downward to prevent sea water or rain water from collecting in the power plug.

#### 1.3.4 Adjust the ventilation

Adjust the opening of the ventilation according to the cargo.

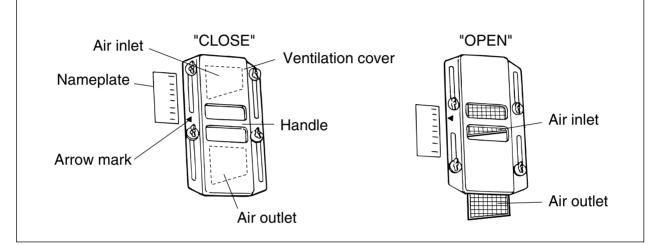

Keep the ventilation closed when ventilation is not necessary or during transportation of the frozen cargo.

Set the arrow mark of the handle to "CLOSE" when ventilation is not required or during frozen operation.

When ventilation is required (chilled mode) slide the handle upward.

\*Set the arrow mark of the ventilation at the scale on the nameplate according to the required ventilation amount.

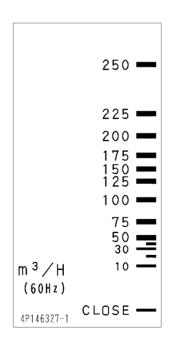

#### **◆Fresh air suction amount**

The scale marks on the nameplate are the reference ones, not guaranteeing the amount.

Fresh air suction amount (ventilation amount) varies in accordance with static pressure differences, the container conditions, cargo loading condition in the container, and power supply (voltage, frequency).

 In the case of the same static pressure, fresh air suction amount at 50 Hz is reduced to approximately 5/6 of that at 60 Hz.

Nameplate attached to the unit

### 2. GENERAL DESCRIPTION

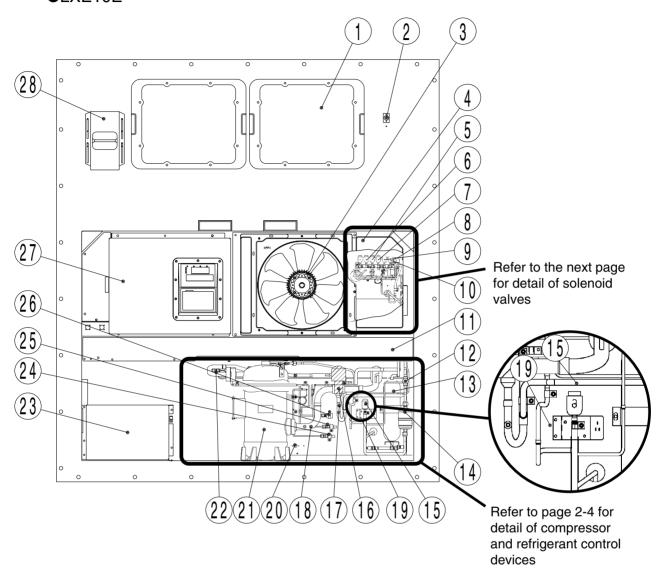

### 2.1 Main specifications

Model Item		LXE10E100 or later	
	Controller	DECOSⅢe	
	Power supply	AC 3-phase 380V/400V/415V 50Hz, 440V/460V 60Hz	
	Compressor	Full hermetic scroll type (Motor output: 5.5kW)	
	Evaporator	Cross fin coil type	
	Air-cooled condenser	Cross fin coil type	
	Evaporator fan	Propeller fan	
	Evaporator fan motor	Three-phase squirrel-cage induction motor	
	Condenser fan	Propeller fan	
	Condenser fan motor	Three-phase squirrel-cage induction motor	
System		Hot-gas defrosting system	
efrosting	Initiation	Initiation Dual timer, on-demand defrost and manual switch	
Termination		Detecting the temperature of evaporator outlet pipe and return air	
	Refrigerant flow control	Electronic expansion valve	
	Capacity control	Capacity control with hot gas bypass and suction modulating valve	
		Circuit breaker, PT/CT board (for over current protection).	
	Dusta ativa davias a	Compressor thermal protector	
	Protective devices	Condenser fan-motor thermal protector

#### Solenoid valve and activation

BSV : Discharge gas by-pass solenoid valve

BSV bypasses discharge gas to the suction side of the compressor to maintain low pressure at low outside temperatures.

DSV : Defrost solenoid valve

DSV supplies discharge gas (hot gas) from the compressor to the evaporator to defrost.

E V : Electronic expansion valve

EV controls the evaporator outlet superheat by using the temperature sensor at the evaporator outlet and inlet to control the refrigerant flow rate to the evaporator.

In case of EV coil abnormality or the controller malfunctions, the emergency magnet can be used to manually set the opening.

HSV : Hot gas solenoid valve

HSV supplies hot gas to maintain the temperature inside during chilled operation at low outside temperature.

ISV: Injection solenoid valve

ISV is activated when the following cases occur:

1)When compressor discharge gas temperature is too high (for the protection of the compressor and lubricant)

2)When refrigerant flow rate is too low during defrosting operation. The defrosting time can be shortened with appropriate amount of refrigerant.

LSV : Liquid solenoid valve

LSV closes for pump down operation and during the automatic pumping-down and defrosting operations.

RSV : Reheater solenoid valve (to control dehumidification)

RSV is activated during dehumidification operation to supply discharge gas (hot gas) from the compressor to the reheater coil.

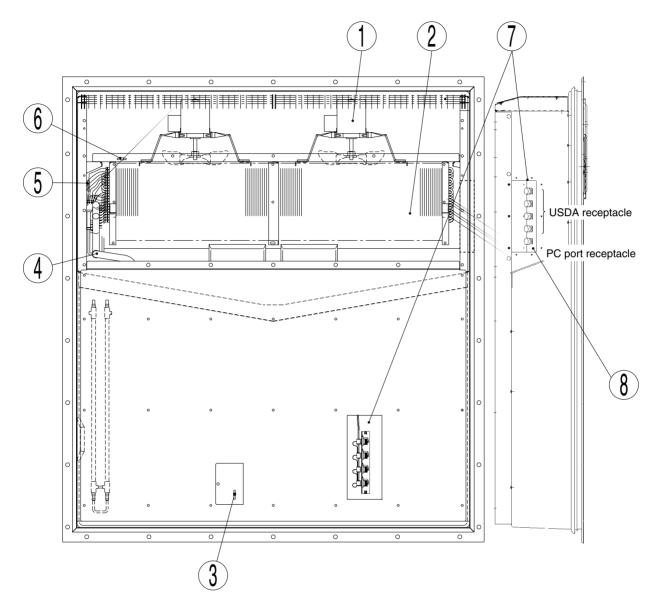

SMV : Suction modulating valve

SMV automatically adjusts its opening to control the refrigerant flow rate by using the supply air temperature sensor SS during chilled operation.

The valve is fully open during pull-down or frozen operation. In case of SMV coil abnormality or the controller malfunctions, the emergency magnet can be used to fix the opening in full

<sup>%1</sup> When dehumidification is ON in dehumidification mode, the setting figure may change between 900~2100kPa automatically (Refer to "High Pressure Control" Page 2-24)

<sup>%2</sup> Refer to "Fuse Protection table" in section 7.9.

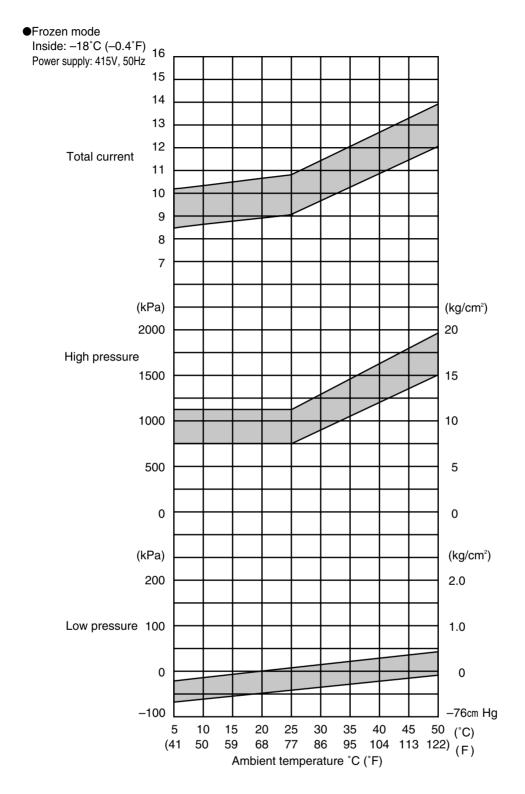

### 2.4 Operating pressure and running current

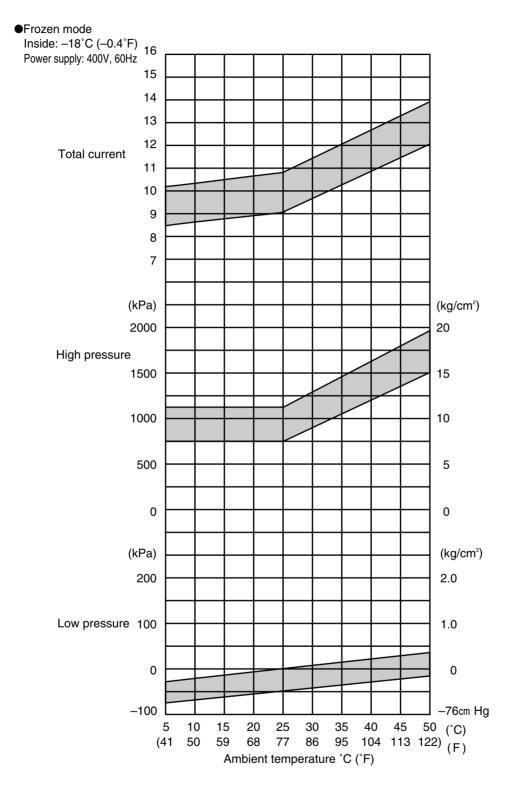

Item	Current A	
Condenser fan motor	1.4 (415VAC)	
running current	1.4 (415VAC)	
Evaporator fan motor	3.2 (415VAC)	
running current (2 motors)	Hi speed	

Item	Current A	
Condenser fan motor running current	1.4 (400VAC)	
Evaporator fan motor running current (2 motors)	3.2 (400VAC) Hi speed	

Item	Current A
Condenser fan motor running current	1.4 (415VAC)
Evaporator fan motor	0.9 (415VAC)
running current (2 motors)	Low speed

Item	Current A
Condenser fan motor running current	1.4 (400VAC)
Evaporator fan motor	0.9 (400VAC)
running current (2 motors)	Low speed

#### 2.5 Operation modes and control

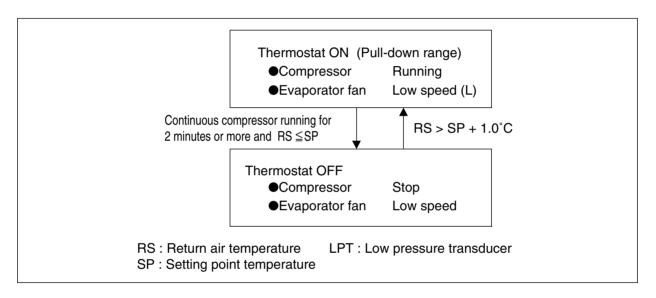

Two types of operation modes are available. chilled mode and frozen mode.

\*For details, refer to clause 2.5.1 to 2.5.4

Operation mode	Setting temperature	Control sensor	Inside fan	Operation description
Chilled mode	-9.9°C to +30.0°C (-14.1°F to +86.0°F)	Supply air temperature sensor	High speed	Capacity control operation with suction modulating valve and hot- gas bypass control
Frozen mode	-30.0°C to -10.0°C (-22.0°F to +14.0°F)	Return air temperature sensor	Low speed	Compressor ON/OFF control
Defrosting operation	-	-	OFF	Hot-gas defrosting with refrigerant quantity control

#### 2.5.1 Frozen operation

Control state transition and common control

#### Operation of magnetic contactor and solenoid valve

Component name			Thermostat ON	Thermostat OFF	
Magnetic contactor	Compressor	CC	ON	OFF	
	Evaporator fan. High speed	EFH	OFF	OFF	
	Evaporator fan. Low speed	EFL	ON	ON	
	Condenser fan	CF	ON / OFF ※1	OFF

Solenoid	Defrost solenoid valve	DSV	OFF	OFF	
S	Discharge gas by-pass solenoid valve	BSV	OFF	OFF	
	Reheat solenoid valve	RSV	OFF	OFF	
	Suction modulating valve SMV		328pls (100%)		
	Electronic expansion valve	EV	21~420pls (5~100%)		

Note) %1: High pressure control (Refer to Page 2-24)

※2: Injection control (Refer to Page 2-25)

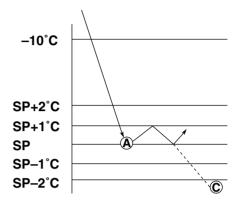

#### (1) Set point temperature and control sensor

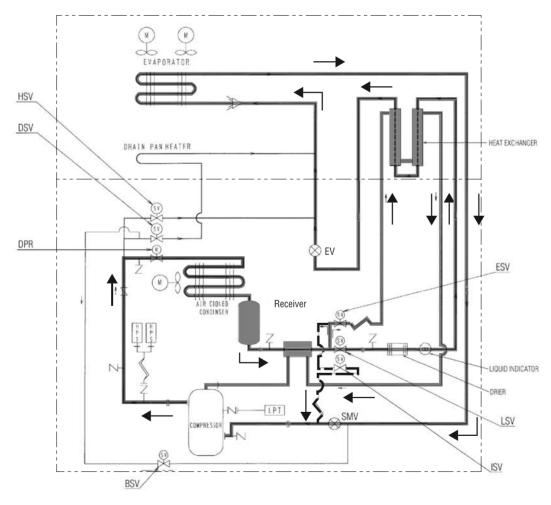

When the set point temperature (referred to as SP hereafter) is  $-10.0^{\circ}C(+14.0^{\circ}F)$  or lower, the compressor is operated ON and OFF, in response to return air temperature.

#### (2) Control

- ①When the control temperature reaches SP (point A), the compressor and condenser fan are turned off.
- ②When the control temperature exceeds SP+1.0°C, the compressor, liquid solenoid valve and condenser fan are turned on.

  However, the compressor runs for at least 2 minutes every time once it is turned on. Even if the control temperature reaches SP or lower (point C) within 2 minutes after the compressor is turned on, the compressor, condenser fan and liquid solenoid valve are not turned off. (2 minutes compressor forced operation)

EV :Electronic Expansion Valve

LSV :Liquid Solenoid Valve

DSV: Defrost Solenoid Valve

ESV: Economizer Solenoid Valve

%5: Capacity control and hot gas by-pass (P.2-26)

%3: Charge control (P.2-26)

#### (1) Set point temperature and control sensor

If the set point temperature is  $-9.9^{\circ}$ C ( $-14.1^{\circ}$ F) or higher, the suction modulating valve is controlled by the supply air temperature to adjust the freezing capacity.

#### (2) Control

(a) Pull-down operation

Pull-down operation is carried out with fully opened suction modulating valve when the control temperature (SS) is higher than the set point temperature by 1.5°C or more (point ①).

(b) Capacity control operation

When the control temperature reaches the point ②, the suction modulating valve is activated to conduct the capacity control operation. After rising and dropping, the control temperature remains stable at the point ③. During the capacity control operation, hot gas by-pass (HSV, DSV, BSV) and liquid injection (ISV) are used in order to maintain the optimum operation condition of the refrigerant system.

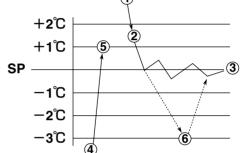

(c) Heat-up operation

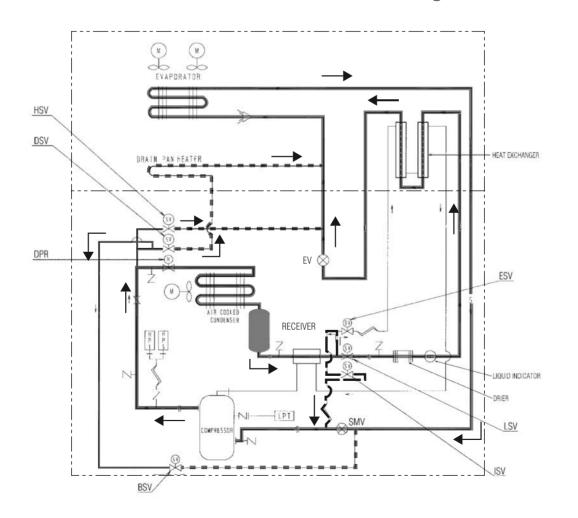

When the control temperature (SS) is lower than the set point temperature by  $+1.5^{\circ}$ C(point 4), heat-up operation using hot gas is conducted. This heat-up operation raises the control temperature to the set point temperature  $+1.0^{\circ}$ C(point 5). It rises up to set point

temperature +2.0°C during dehumidification operation.

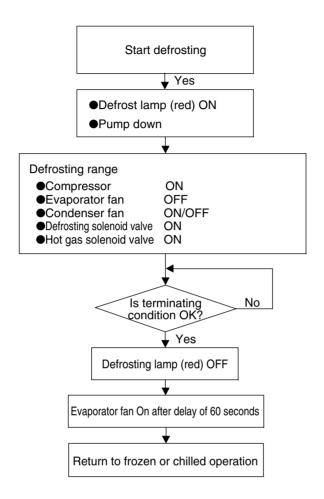

(d) Overcool protection operation

Although the unit's operation is in a stable state, if the control temperature lowers below set point temp by -3.0°C (point ⑥), the compressor stops and only the evaporator fan continues to operate.

#### 2.5.3 Defrosting operation

Operation of magnetic contactor and solenoid valve

Component name			Pump down Defrosting	
Magnetic	Compressor	CC	ON	ON
	Evaporator fan. High speed	EFH	OFF	OFF
	Evaporator fan. Low speed	EFL	OFF	075
2 0	Condenser fan	CF	ON	ON/OFF %2
	Liquid solenoid valve	LSV	OFF	OFF
Solenoid valve	Economizer solenoid valve	ESV	ON	OFF
	Injection solenoid valve	ISV	OFF	ON/OFF %1
	Hot-gas solenoid valve	HSV	OFF	ON
	Defrost solenoid valve	DSV	OFF	ON
	Discharge gas by-pass solenoid valve	BSV	OFF	OFF
	Reheat solenoid valve	RSV	OFF	ON/OFF %3
	Suction modulating valve	SMV	328pls (100%)	328pls (100%)
	Electronic expansion valve	EV	48~420pls (11~100%)	0pls (0%)

Note) %1: Charging control (P.2-26)

%2: Release control (P.2-26)

%3: RSV:ON EOS>15°C

#### **Defrosting operation**

#### (1) Defrosting system

A hot-gas defrost system is adopted in the units; i.e. the high temperature and high pressure refrigerant (hot gas) from the compressor is sent to the evaporator and drain pan for defrosting. Since the evaporator is heated directly by the hot gas (refrigerant), defrosting can be performed efficiently.

#### (2) Defrosting initiation

Defrosting initiation		Functions and timer setting		
Pull down	Short timer	4 hours *1		
	Automatic frost detection	Executed when the suction air temperature does not drop		
		by 0.2°C or more per hour during frozen operation *2		
In-range	Defrosting interval	3 hours, 6 hours, 9 hours, 12 hours, 24 hours		
		99 "On-demand defrosting" *3		
		30 minutes		
Out-range	Out-range timer	Executed 30 minutes after the control temperature		
		rises out of the in-range		
Manual defrosting (manual)		Executed by MSD key		

- \*1. 6 hours when the control temperature is -20.0°C or below
- \*2. Not executed when the control temperature is -20.0°C below
- \*3. On-demand defrosting setting

If "99" is set, the on-demand defrosting is carried out.

The on-demand defrosting is executed during the frozen operation, and the defrosting interval is internally set to 12 hours. However, the defrost cycle will not activate if the evaporator does not have a heavy frost when 12 hours have been counted.

("If chilled operation is selected when "99" is set, the defrosting interval will be automatically set to "6" hours.)

- Step 1: After defrost termination, the operation time per hour of the compressor (T1) is recorded.
- Step 2: Aterward, the measurement of the operation time per hour of the compressor is continued, and the time (T2) is recorded.
- Step 3: If T2 > T1×1.15, the defrosting operation is initiated. If T2 $\leq$ T1×1.15 when 12 hours have been counted, the freezing operation is continued.

#### (3) Defrosting initiation conditions

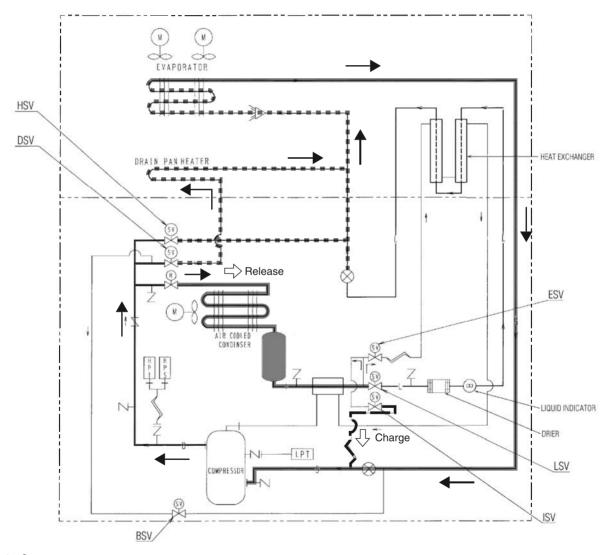

Timer count	Initiation conditions for defrosting	
Short timer		
Defrosting interval (frozen)	EOS≦20.0°C	
Out-range timer		
Manual defrosting		
Defrosting interval (chilled in-range)	EIS<5.0°C&EOS≦20.0°C	

- Note 1: If the initiation conditions for defrosting are not satisfied during timer counting or the manual defrosting operation, the defrosting operation is not executed based on the judgment that no frost is detected.
- Note 2: In the case of the unit equipped with a reheat coil for dehumidification control (optional) (REHEAT setting "ON"), when dHU setting is "OFF", defrosting operation is executed regardless of the temperature for the initiation conditions.

#### (4) Defrosting termination conditions

Defrosting time	Defrosting termination conditions		
Within 45 minutes	EOS≧20.0°C		
	Defrosting interval (frozen)	EOS≧30.0°C	
More than 45 minutes	Short timer Defrosting interval (chilled) Out-range timer Manual defrosting	EOS≧30.0°C &RS/DRS≧15.0°C	
100 minutes	Shutdown (100 minutes for the backup timer)		

Note 1 Defrosting operation is terminated when a protection device is activated.

Note 2
\*1: "Charge" and "Release" control during defrosting operation

#### 2.5.4 Dehumidification control operation (optional)

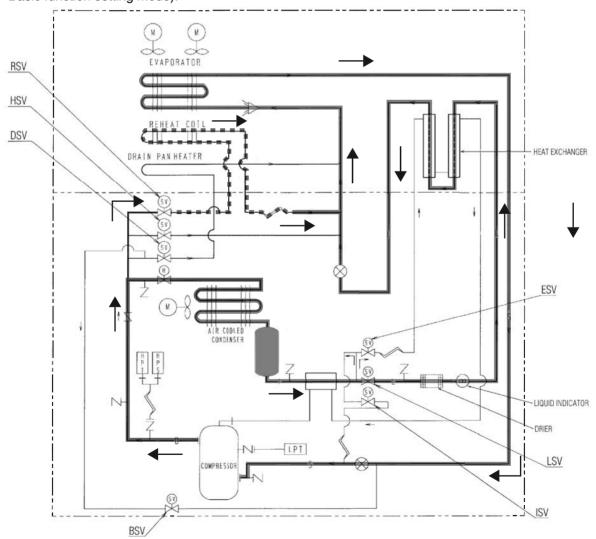

Dehumidification control, like the defrosting operation, uses high temperature refrigerant (hot gas) from the compressor. It is executed by flowing the hot gas to the reheat coil mounted to the bottom of the evaporator. This control is optional, available for the unit equipped with a reheat coil only.

- 1. To execute dehumidification control, setting the dehumidification control dHU to "ON" or "ON-A" is necessary. "ON" for the unit equipped with humidity sensor, "ON-A" for the unit without it. For setting procedures, refer to 3.3.2 (4. Mode operation)
- 2. Humidity setting range: 60 to 95%RH (when dHU is set to "ON"). For setting procedures, refer to 3.3.2 (2. Operation setting mode).
- 3. When dHU is set to "ON" or "ON-A", the "DEHUMID" lamp at the top of the control panel lights up.

Dehumidifi	cation control	dHU setting	DEHUMID lamp	
	ON: for the unit equipped	ON	ON*1	
When dehumidification	with humidity sensor		ON ·	
control is executed	ON-A: for the unit	ON-A	ON*1	
	without humidity sensor	ON-A	ON.	
When dehumidific	ation is not executed	OFF	OFF	

#### \*1 When the DEHUMID lamp does not light up

Set ON for the reheat coil installation "ON/OFF setting". For the setting procedures, refer to 3.3.2 (11. Basic function setting mode).

#### 2.5.5 Common control

The following are controlled in different operation modes. (For the details, refer to the following pages.)

	Control name	Control content	C	peration		
	Control name	Control content	Frozen	Chilled	Dehumidification	Defrost
A	Compressor ON/OFF control	The compressor is operated on and off to

L	Economizer control	cooling capacity.				
N.4	Deheat ceil central	The reheat solenoid valve (RSV) is controlled to			<b>/</b>	
М	Reheat coil control	carry out dehumidification.				

#### Common control

#### A: Compressor ON/OFF control

When the control temperature reaches the set temperature or lower, the compressor is stopped. When the control temperature rises and becomes higher than the [set point temperature +1.0°C], the compressor runs again.

When the compressor starts running, it is forcibly run for 2 minutes. (2 minutes compressor forced operation) in order to prevent the compressor from deterioration due to shortage of lubricant.

#### **B**: Starting control

Control when protective device activated

When the high pressure rapidly rises on starting or when the starting current is overcurrent, the compressor automatically stops to suppress high pressure and starting current.

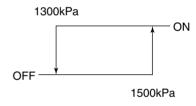

O Temperature control of refrigerant oil

When ambient temperature is low, the temperature of refrigerant oil for compressor is also low and the viscosity of the oil may be high.

On starting the unit, by-pass discharge gas to suction side of the compressor by opening the solenoid valve (BSV) to raise the oil temperature rapidly ensuring a stable feed of oil.

In order to control the oil temperature of refrigerating unit or in the event the high pressure is low, operate the compressor with the condenser fan stopped. If the high pressure reaches 1500 kPa or more, the fan will restart to operate.

The temperature control for refrigerant oil should be executed not with power ON/OFF in normal operation but with power ON under low ambient temperature.

An oil temperature raising control can be executed when all of the following conditions are met.

- The time turning power supply ON
- Ambient temperature ≤ 10°C
- (Discharge gas temperature ambient temperature) ≤ 4°C

#### C : Evaporator fan speed control

The speed of the evaporator fan is switched in accordance with operation modes. A stop time of 10 sec. is provided to switch the high speed to low speed and vice versa.

Chilled mode : High speed Frozen mode : Low speed

#### D : Superheat control

The evaporator superheat is adjusted to be optimum by controlling the opening of the electronic expansion valve based on the evaporator inlet and outlet refrigerant temperature and the compressor suction gas temperature.

#### E: High-pressure control

• By electronic expansion valve

When the ambient temperature is high during the air-cooled operation, the condensing pressure (high pressure) will increase, and the high pressure switch may be activated.

In order to prevent this situation, the high pressure is controlled to be 2350kPa or lower by adjusting the opening of the electronic expansion valve.

#### • By condenser fan control

When the ambient temperature is low during the air-cooled operation, the condenser pressure (high pressure) will decrease. Accordingly, the low pressure will decrease. In order to prevent this situation, when the high pressure becomes set point or lower, the condenser fan stops to prevent the high pressure from excess dropping. When the high pressure becomes set point or higher the condensor fan will restart. This control varies upon dehumidification setting.

Dehumidification : OFF

Dehumidification : ON

High pressure ≤ 800kPa

High pressure ≤ 700~1800kPa

OFF

High pressure > 1000kPa

High pressure > 900~2100kPa

#### F: Injection control

In order to decrease the discharge gas temperature, liquid refrigerant is injected into the suction pipe.

During normal compressor operation

The injection solenoid valve will be turned on or off to control the discharge gas temperature lower than set point.

The control is conducted properly by using detected discharge gas temperature and inside temperature.

Discharge gas temperature (DCHS) set value

		Chilled,			
AMBS<40°C		<40°C	AMBS>40°C	,	
	RS≦0°C RS>0°C		AMB3>40 C	capacity control	
ISV_ON	DCHS>120°C	DCHS>125°C	Turned ON/OFF depending on	DCHS>113°C	
ISV_OFF	DCHS<110°C DCHS<118°C		AMBS and RS	DCHS<108°C	

#### Defrosting / Heat-up operation

Control the injection ON/OFF with charge control. For details, see the section of "charge control" on page 2-29.

#### G: In-range control

When the control temperature is close to the setting value (SP), the in-range lamp on the display panel is lit to clearly indicate whether the inside temperature is controlling normally.

#### H: In-range masking control

If the inside temperature is within the in-range when defrosting is started, the in-range lamp will be kept turned on forcibly for certain period as below regardless of the inside temperature thereafter.

This will avoid misunderstanding that there is a problem as the control temperature temporarily rises during defrosting.

Setpoint ≧ –20.0°C	100 minutes
Setpoint ≤ –20.1°C	130 minutes

2-25

#### I : Capacity control

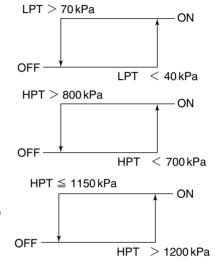

In the chilled mode operation, adjusting cooling capacity makes the supply air temperature stable at the set point temperature (SP).

The capacity control is executed by adjusting the opening of suction modulating valve (SMV) between 3 to 100 %.

#### J: Charge and release control

Charge control or release control is executed to maintain the heating capacity optimum in defrosting and heating operation.

- · Charge control
- ①The LPT controls the suction pressure by using the ISV (Injection Solenoid Valve) to inject liquid refrigerant into the suction pipe.
- ②The HPT controls the discharge pressure by using the ISV (Injection Solenoid Valve) to inject liquid refrigerant into the suction pipe.

#### Release control

The discharge pressure (HPT) is detected and the condenser fan (CFM) is turned on, then, the refrigerant is released into the condenser.

#### K: Pump down control

When Defrost operation or Heating is activated, the Liquid Solenoid Valve (LSV) closes first to carry out Pump Down operation to collect the refrigerant in the receiver. The pump-down operation is stopped when the low pressure becomes 0kPa or less.

#### L: Economizer control

This unit using an economizer circuit combining the intermediate injection into the scroll compressor with the refrigerant heat exchanger. By turning ON the economizer solenoid valve (ESV), the economizer circuit is activated to keep a large sub cooling performance of liquid refrigerant and significantly increase the cooling performance.

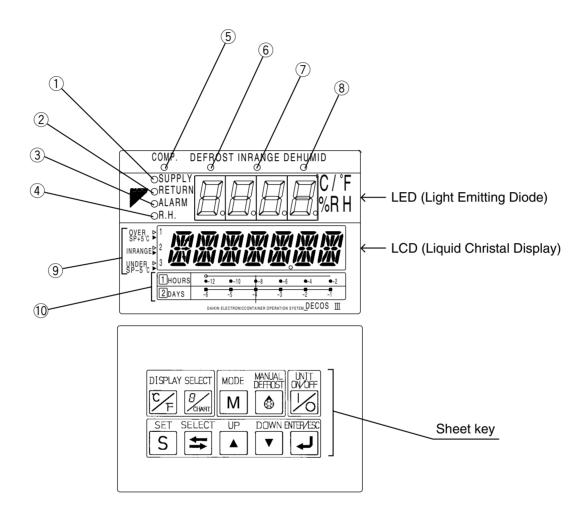

• The economizer control is operated only while the pull-down operation is in progress.

#### 3. ELECTRONIC CONTROLLER

#### 3.1 Basic operation of electronic controller

#### 3.1.1 Control panel

Name and function of each component

- ① SUPPLY LED (Lights when "supply air temperature" is indicated.)
- 2 RETURN LED (Lights when "return air temperature" is indicated.)
- 3 ALARM LED (Blinks when alarm is generated.)
- 4 R.H.LED (Lights when "relative humidity" is indicated.)
- 5 COMP.LED (Lights when the compressor is running.)
- 6 DEFROST LED (Lights when the unit is under the defrosting operation.)
- 7 IN RANGE LED (Lights when the control temperature is in range.)
- ® DE-HUMID.LED (Lights when the controller is the dehumidification control. (optional)
- Temperature base (Used for the graphic chart indication on the LCD.)
- 10 Time base (Used for the graphic chart indication on the LCD.)

#### **Function of operation key**

#### **●UNIT ON/OFF key**

To start or to stop the unit operation.

The controller has a memory function.

If the power supply is cut off suddenly while the unit is on, and the power supply is then turned on again, the unit automatically starts the operation without pressing this key again. If the power supply is cut off while the unit is off, the unit does not start the operation unless this key is pressed.

#### ●MODE key

To carry out the following control

- Generator set (=Power corsumption control)
- 2 Automatic pump down
- ③ Dehumidification set

#### SET key

When the power supply is ON:

- Change operation mode from the CURRENT INDICATION MODE to the OPERATION SETTING MODE.
- ② Select the item to be set in the operation setting mode.

When the power supply is OFF:

 To change operation modes from the POWER OFF MODE to the BATTERY OPERATION MODE.

#### ●SELECT key

This is not normally used in the basic operation procedure. (This is mainly used in the maintenance procedure.)

#### ●UP key

To select the item to be set in the selected mode.

#### **●DOWN** key

To select the item to be set in the selected mode.

#### **●ENTER/ESCAPE** key

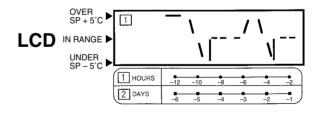

To determine the setting values or displayed contents in the selected mode.

#### **CHART key (DISPLAY SELECT key)**

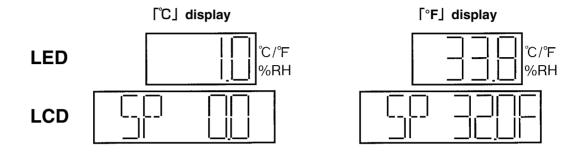

If CHARTLESS Function is "ON", this key is effective.

To display logged temperature data in a simple graphic chart on the LCD, press this key when the display reads "set point temperature" or other data. When this is pressed once again, the display returns to "set point temperature" or other data again.

- 1 Indicates the temperature data required to be converted into "°F" on the LED or the LCD.
- ② Press the F key, then the temperature data displayed in "°C" is converted into "°F" for one minute.
- If any other key is pressed during the "F" indication, the display switches to "C".

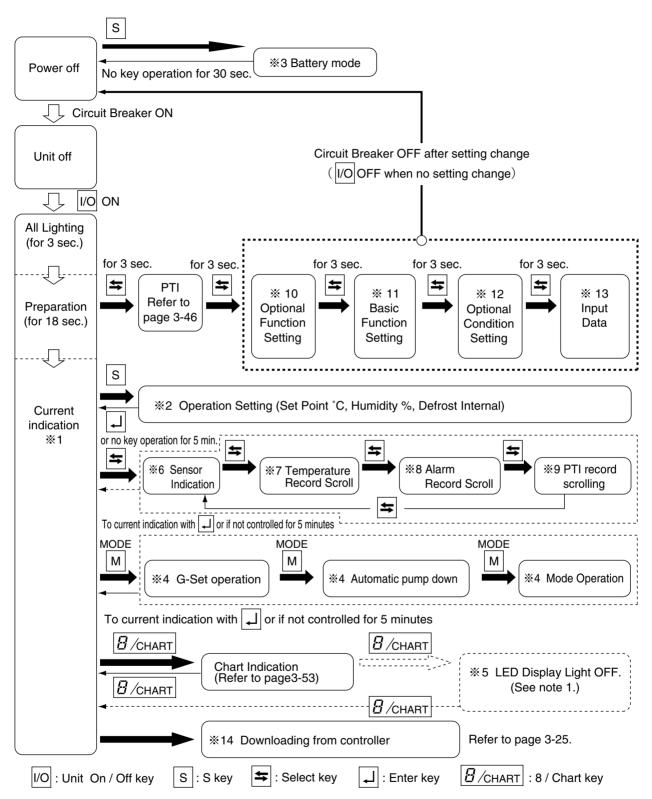

#### **Manual defrost operation**

- 1) Press the MANUAL DEFROST ( key.
- ②Select "ON" indicated on the LED display using the  $\triangle$  key or the  $\overline{\bigcirc}$  key, and press the  $\overline{\buildrel{\bot}}$  key to determine the setting, then the defrost operation starts.
- %The defrosting operation will not start if the temperature of the evaporator outlet tube (EOS) is 20°C or higher and that of the evaporator inlet tube (EIS) is 5°C or more.
- ※If dehumidification function is available (the reheater coil is turned ON), the defrosting operation may start even when the evaporator temperature is 5°C or more.

#### 3.2 Operation procedure

#### 3.2.1 Operation procedure flow chart

#### 3.2.2 Mode operation procedure

#### (1. CURRENT (Operation state) INDICATION MODE)

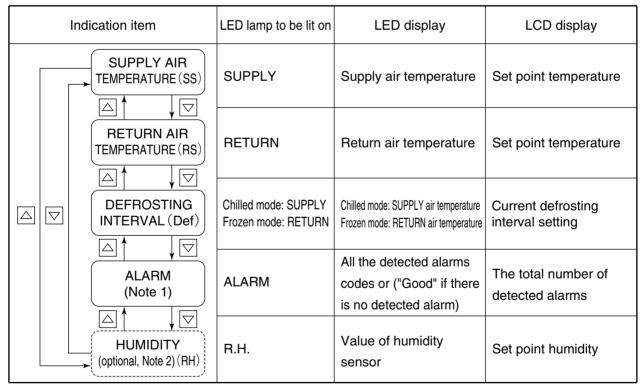

Supply air temperature (SS), return air temperature (RS), defrosting interval, currently existing alarms, set point humidity, and humidity are indicated.

Turn on the circuit breaker and the UNIT ON/OFF key after turning the power supply on, then the display panel switches to the CURRENT INDICATION MODE. (Key operation in the CURRENT INDICATION MODE is possible after approx. 21 seconds from turning on the UNIT ON/OFF key.)

In the CURRENT INDICATION MODE, supply air temperature, return air temperature, defrosting interval, current alarm and current humidity (optional) are shown.

Select an item using the  $\triangle$  or  $\nabla$  key. The value of the selected item is indicated on the LED lamp, LED display and LCD display.

Note 1) ●Each pressing of the down key, scrolls through the detected alarm codes in sequence when two or more alarm codes are displayed.

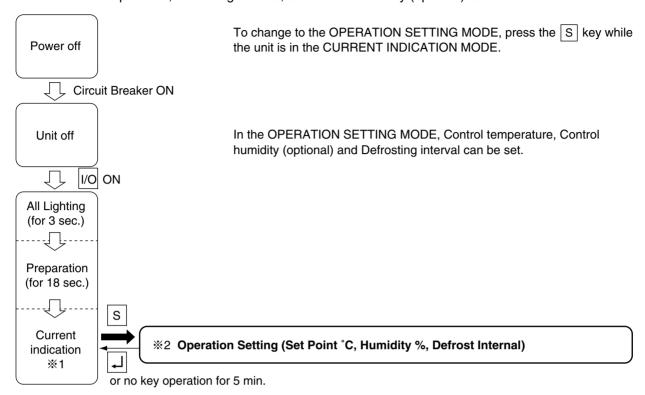

After indicating the last alarm, display goes to the next item.

The numerator of the LCD display stands for the current alarm, while the denominator stands for the number of alarm codes existing.

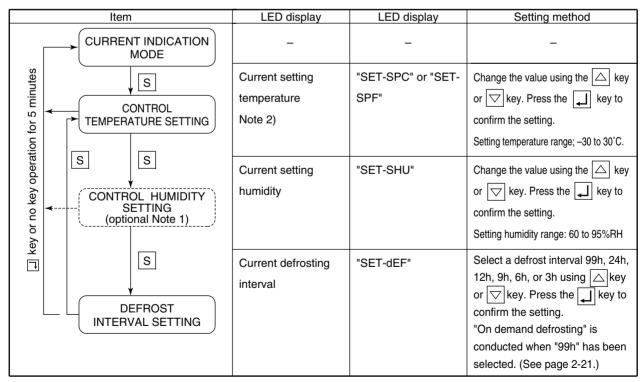

Note 2) ●The value of the humidity sensor is displayed only when the "Dehumidification Control on/off Setting" is set to "ON", otherwise this item is skipped and the next item is shown.

#### 2. OPERATION SETTING MODE

Control temperature, defrosting interval, and control humidity (optional) can be set.

Select an item using the S key. The value of the selected item is indicated on the LED and LCD display.

Note 1) •When the humidity control is not set, this indication does not appear.

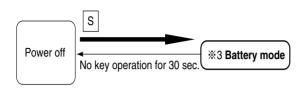

Note 2) ●In case temperature is set in °C setting temperature can be set at interval of 0.1 °C.

In case temperature is set in °F, setting temperature should be the value converted into °F based on °C and rounded off the two decimal places.

#### 3. BATTERY MODE

When commercial power is not available, the following functions are available by using the built-in wake up batterv.

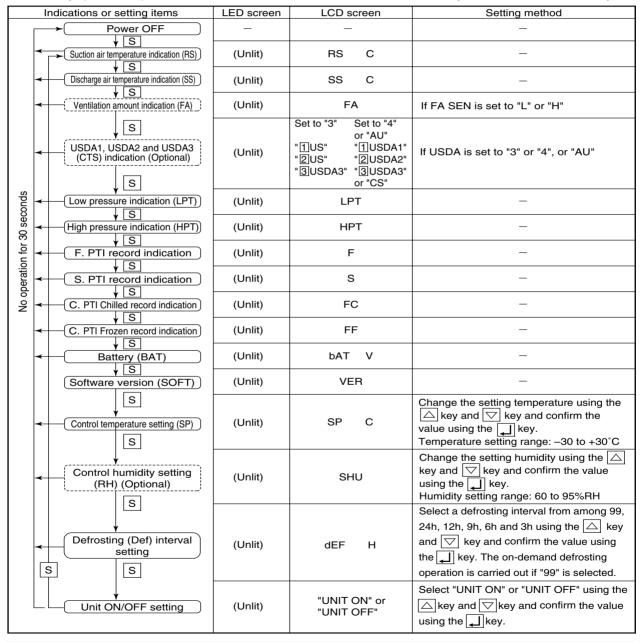

- Indication of inside supply air temperature (SS) and return air temperature (RS)
- · Setting for control temperature, control humidity and defrost interval

To change to the BATTERY MODE, press the S key while the unit is in the POWER OFF STATUS.

In the BATTERY MODE, return air temperature/supply air temperature can be indicated. Control temperature, Control humidity (optional), Defrosting interval and Unit ON/OFF key can be set.

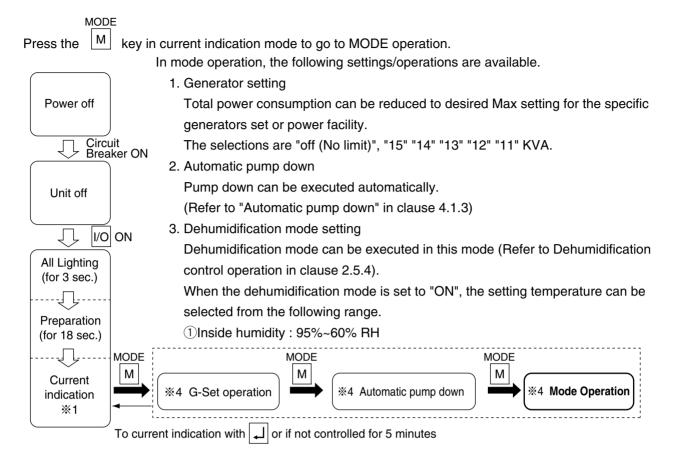

Select an item using the S key. The value of the selected item is indicated on the LCD screen. When no key operation is performed for 30 seconds in the BATTERY MODE, the battery mode turns off automatically off.

If no indication on the LCD panel is displayed by operating the key, it is supposed the wake-up battery is dead. Replace the battery.

#### 4. MODE OPERATION

Setting item	LED panel	LCD panel	Setting method
Current indication mode	_	-	_
G-set operation Note 1)  MODE  MODE	Power consumption upper limit setting Setting values OFF, 11, 12, 13, 14, 15 unit: kVA	G-SET	Select the power consumption upper limit setting by using   or very key, and press the key to confirm the setting.
Automatic pump down operation  MODE	ON, OFF	P down	Select "ON" by using  key and  key, and press the  key to confirm the setting.
Dehumidification  (OFF) (ON)	ON/OFF	dHu	Select desired setting by △ or ▽ key, then press ↓ key.
MODE MODE  M M  Humidity set  MODE	95% RH~60%RH	SET-SHU	Select desired setting by Akey or key, then press key to confirm.

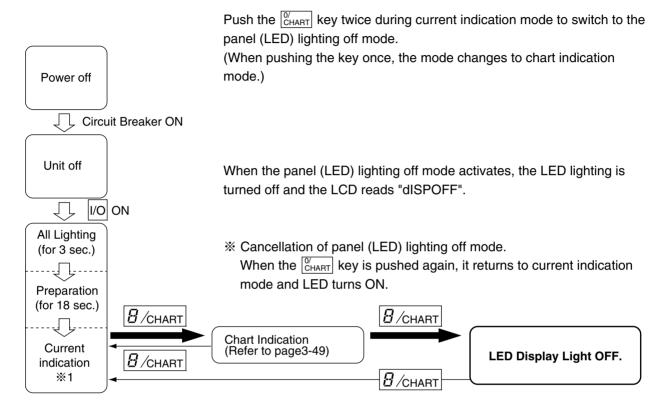

Note 1) In case of the G set operation, G-Set is also turned OFF automatically when the power is turned OFF.

#### 5. LED display LIGHT-OFF MODE

The controller LED display is turned off with this mode.

Activation of the panel (LED) lighting off mode.
 To activate the panel (LED) lighting off mode, set the LED lighting off function "dISP" in "11. Basic function setting mode" to ON. Refer to page 3-21.

#### <Operation procedure>

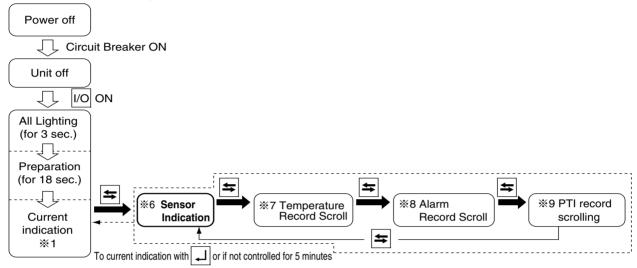

#### **6. SENSOR INDICATION MODE**

Each sensor value and the opening of the suction modulating valve (SMV) and the electronic expansion valve (EV) can be checked. The following items are shown.

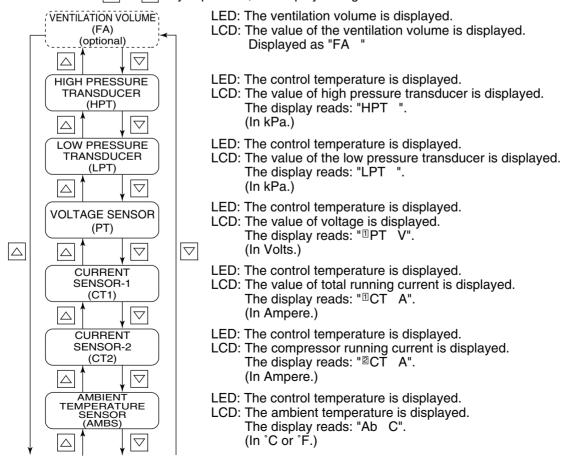

High pressure (HPT), low pressure (LPT), voltage (PT1), total current (CT1), compressor current (CT2), ambient temperature (AMBS), evaporator inlet temperature (EIS), evaporator outlet temperature (EOS), discharge gas temperature (DCHS), suction gas temperature (SGS), suction modulating valve opening, electronic expansion valve opening, supply air temperature (SS) (during PTI only), return air temperature (RS) (during PTI only), pulp temperature (USDA#1, UADA#2, USDA#3) (optional), cargo temperature (CTS) (optional), supply air temperature for data recorder (DSS), return air temperature for data recorder (DRS).

#### <Mode selection procedure>

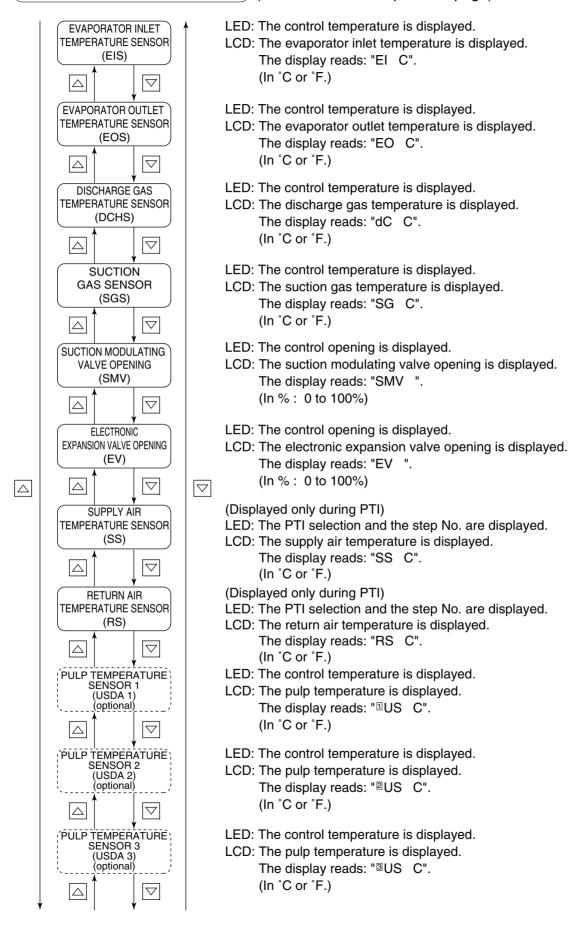

#### <Operation procedure>

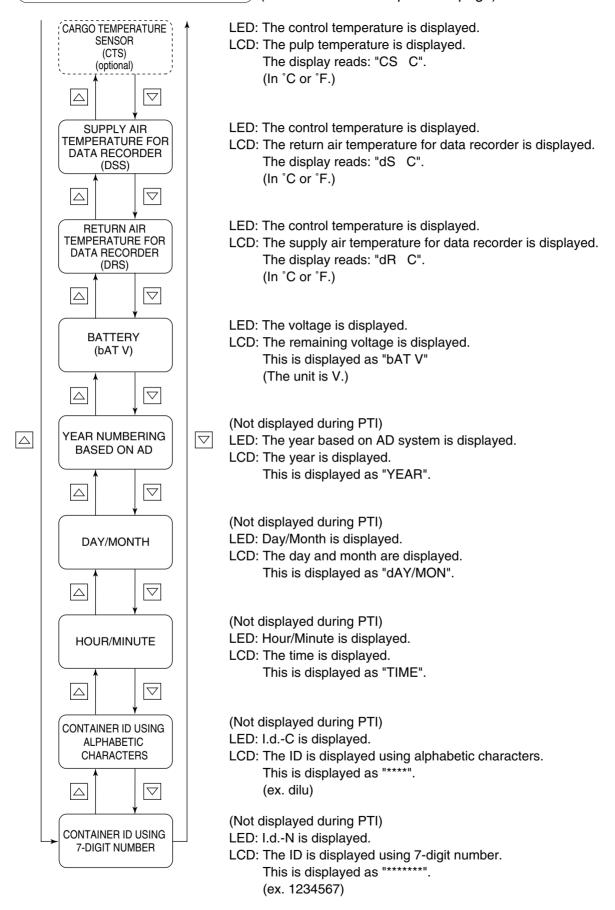

Whenever the  $\triangle$  or  $\nabla$  key is pressed, the display changes.

#### **6. SENSOR INDICATION MODE**) (Continued from the previous page)

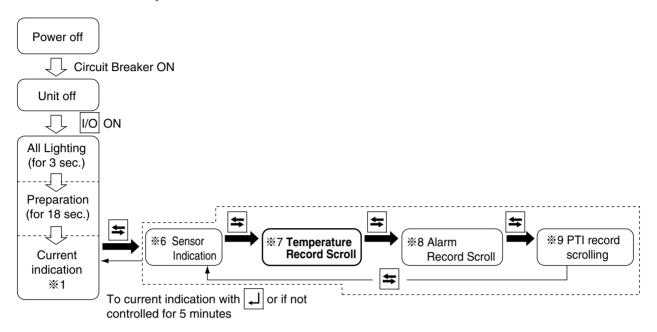

#### **6. SENSOR INDICATION MODE**) (Continued from the previous page)

#### 7. TEMPERATURE RECORD SCROLL MODE

The records of the control sensor are displayed successively (one record per second) starting from the latest data. (A maximum of 7 days)

#### <Mode selection procedure>

#### <Operation procedure>

The LED indicates the control temperature, and the LCD displays the data/time and the data record temperature in turn. (In frozen mode, the return air temperature is the controlled temperature, and in chilled mode, the supply air temperature is the control temperature.)

Press the  $\triangle$  key or  $\nabla$  key to pause the successive display of records. After the pause, the successive (scrolling) display will be resumed if no key operation is done for 10 seconds.

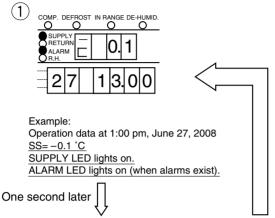

Keep the  $\boxed{\nabla}$  key pressed for 3 seconds to view the data again from the beginning.

To restore the current indication mode, press the  $\begin{tabular}{l} \end{tabular}$  key.

If key operation is not performed within 5 minutes, the current indication mode is resumed.

#### Example of TEMPERATURE RECORD SCROLL INDICATION MODE

It is assumed that the control temperature is the supply air temperature (SS) and the logging interval is 1 hour, and the current date and time are June 27, 2008, 14:00.

The displayed temperature is not the current instantaneous value but an average taken in a specific logging interval.

Therefore, the printed control temperature on the trip report (instantaneous value) printed with the aid of personal computer may differ from the sensor data of the chartless function.

This is not an error.

To restart, press and hold the  $\boxed{\nabla}$  key for 3 seconds.

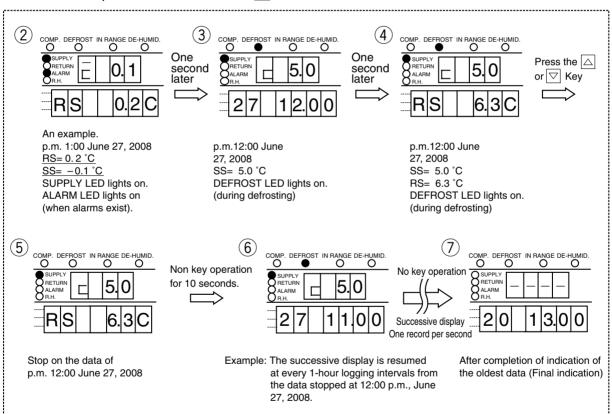

- ※To go back to the current indication mode, press the 

  ↓

  ↓

  ↓

  key.
- \*If key operation is not performed within 5 minutes, the current indication mode screen is resumed.

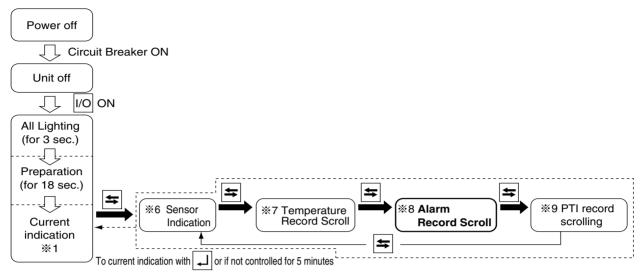

Note: "

" on the leftmost of the LED shows that the indication is of the temperature record scroll indication mode.

#### 8. ALARM RECORD SCROLL MODE

The records of alarms are displayed successively (one record per second) starting from the latest one. (Alarms for a maximum of 7 days)

#### <Mode selection procedure>

#### <Operation procedure>

The alarm codes are displayed in the LED, and the alarm occurrence time and date are displayed in the LCD.

Press the  $\triangle$  key or  $\nabla$  key to pause the successive display of records. After the pause, the successive (scrolling) display will resume if there is no key operation for 10 seconds.

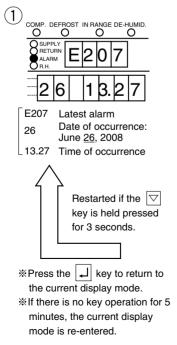

Keep the  $|\nabla|$  key pressed for 3 seconds to view the data again from the beginning.

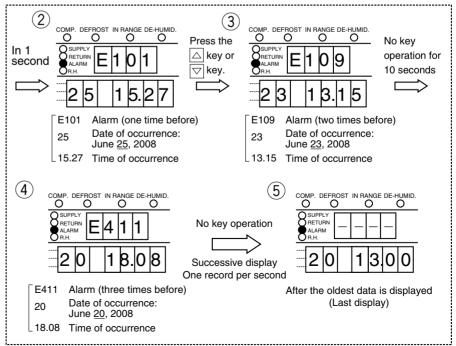

Press the key to return to the current display mode screen.

If there is no key operation for 5 minutes, the current display mode screen reappears.

Example of alarm record scroll mode display

\*The example below is based on the presumption that the current time is around 14:00, June 27,

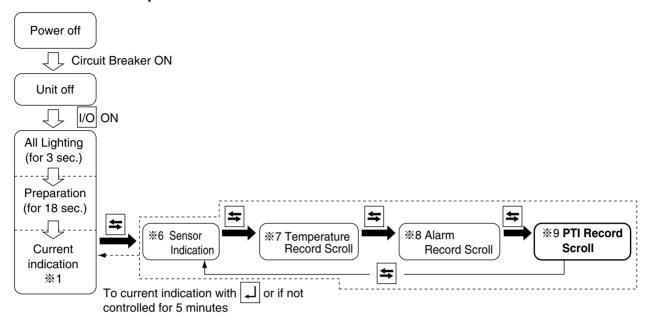

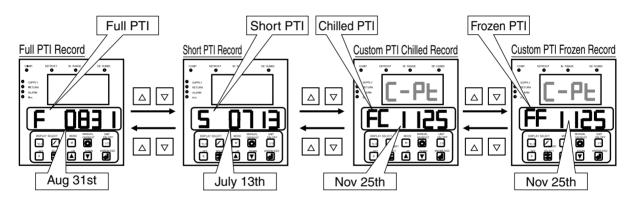

#### 9. PTI RECORD SCROLL MODE

The record is shown in sequence (scroll) starting with the latest data.

#### <Mode selection procedure>

The controller displays "time and date" and "FULL PTI, SHORT PTI, or CUSTOM PTI" as shown below.

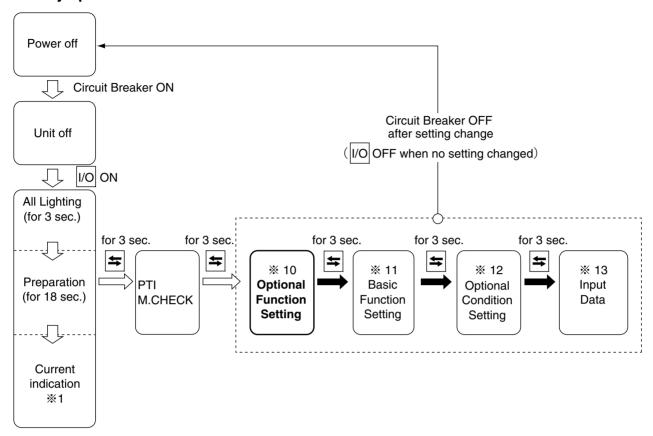

Indicated as below in LCD display when there is no PTI data (applicable for scroll mode and battery mode).

#### 10. OPTIONAL FUNCTION SETTING MODE

#### <Key operation to enter/exit>

#### <Key operation in this mode>

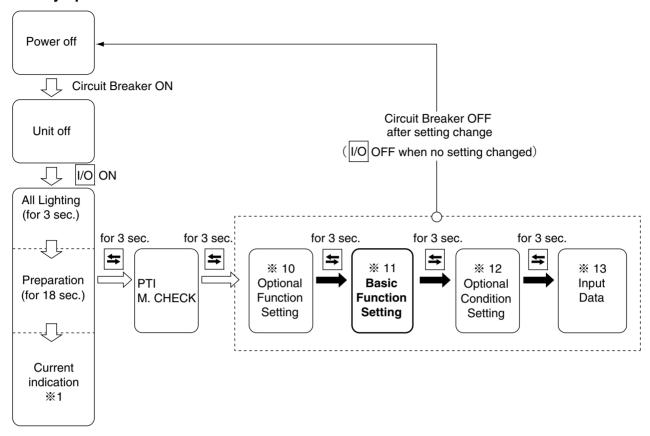

Whenever the S key is pressed, the display changes.

To confirm the setting, turn the power breaker OFF after the setting.

I	ndications or setting items	LED screen	LCD screen	Setting method
S	USDA sensor available/ not available Cargo humidity sensor available/not available	OFF: USDA sensor not available 3 : 3 USDA sensors 4 : 3 USDA sensors and 1 cargo temperature sensor Au : To measure the temperature inside or cargo temperature for the purposes other than cold treatment transport, USDA sensor can record the temperatures ranging from -38°C to +40°C. Don't use it for cold treatment transport because it does not meet the USDA standards.	USdA	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: "3" is set automatically if 2 USDA sensors are connected.
	Dehumidification operation ON/OFF	ON: Dehumidification operation with dehumidification sensor installed ON-A: Dehumidification operation without dehumidification sensor OFF: No dehumidification operation Note: Check if the dehumidification coil available or not available in 3.3.2 (11. Basic function setting mode)	dHU	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: The dehumidification can be turned ON and OFF during the mode operation described in 3.2.4.

#### 11. BASIC FUNCTION SETTING MODE

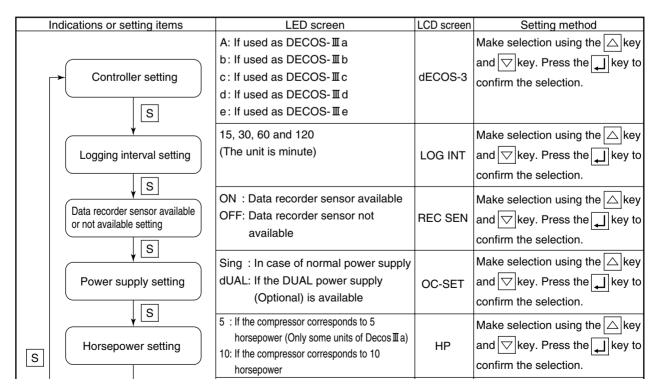

#### <Key operation to enter/exit>

#### <Key operation in this mode>

Whenever the S key is pressed, the display changes.

To confirm the setting, turn the power breaker OFF after the setting.

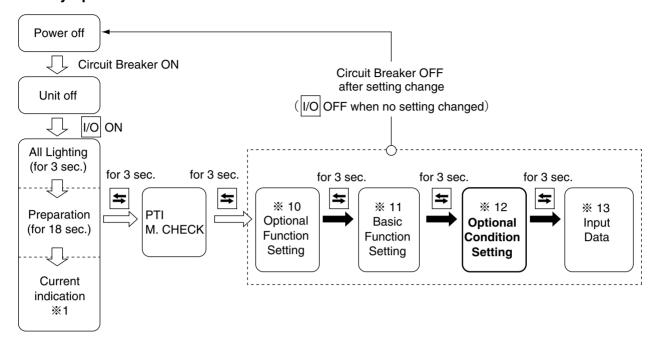

### 11. BASIC FUNCTION SETTING MODE (Continued from the previous page)

Setting LED indicator lamp turning-off function available or not available	ON: Turning-on function available OFF: Turning-off function not available	diSP	Make selection using the △ key and  √ key. Press the √ key to  confirm the selection.  Note: If turned "ON", the LED display  becomes unlit by pressing the  O' CHART key twice.
Compressor unloader system setting	33 : Unloader system available 100: Unloader system not available	COMP	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: "33" is applicable only for LXE10D.
Setting of dehumidification coil available or not available	ON: Dehumidification coil available OFF: Dehumidification coil not available Note: For the unit equipped with reheat coil, be sure to select ON.	REHEAT	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.
Detection of ventilation amount (FA log) function setting	OFF: Detection function not available H: Detection function available at the upper ventilator L: Detection function available at the lower ventilator	FA SEN	Make selection using the △ key and ▽ key. Press the → key to confirm the selection.

#### 12. OPTIONAL CONDITION SETTING MODE

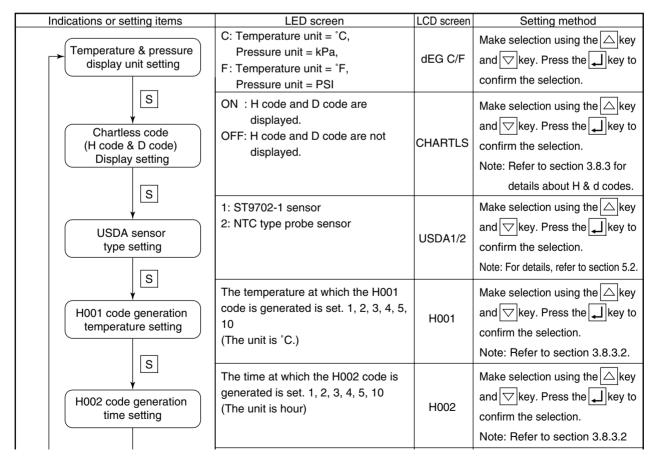

#### <Key operation to enter/exit>

#### <Key operation in this mode>

Whenever the S key is pressed, the indication changes.

To confirm setting, turn the power breaker OFF after the setting.

#### 12. OPTIONAL CONDITION SETTING MODE (Continued from the previous page)

	H003 code generation time setting	The time at which the H003 code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is hour.)	H003	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.2.
S	H004 code generation time setting	The temperature at which the H004 code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is °C.)	H004	Make selection using the △key and ▽key. Press the ↓key to confirm the selection.  Note: Refer to section 3.8.3.2.
	H005 code generation count setting operations which generate the is set. 1, 2, 3, 4, 5, 10	The number of times of defrosting operations which generate the H005 is set. 1, 2, 3, 4, 5, 10 (The unit is number of times.)	H005	Make selection using the △key and ▽key. Press the ↓key to confirm the selection.  Note: Refer to section 3.8.3.2.
	H006 code generation time setting	The time at which the H006 code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is number of times.)	H006	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.2.
	d1 code generation time setting	The time at which the d1- code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is hour.)	d1	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.3.
	d2 code generation time setting	The time at which the d2- code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is hour.)	d2	Make selection using the △key and ▽key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.3.
	d3 code generation time setting	The time at which the d3- code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is hour.)	d3	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.3.
	d-1- code generation time setting	The time at which the d-1- code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is hour.)	d-1-	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.3.
	d-2- code generation time setting	The time at which the d-2- code is generated is set. 1, 2, 3, 4, 5, 10 (The unit is hour.)	d-2-	Make selection using the △key and ▽key. Press the ↓ key to confirm the selection.  Note: Refer to section 3.8.3.3.

#### 13. INPUT DATA MODE

Each of the following item data can be input.

Container I.D. (No.) input and controller and controller time

#### <Key operation to enter/exit>

#### <Key operation in this mode>

Whenever the S key is pressed, the indication changes.

To confirm the setting, turn OFF the circuit breaker.

Indications or setting items	LED screen	LCD screen	Setting method
		SET I.d	Press the key to go to the lower screen.
	I.d C: To the screen in which the shipping company name is input I.d n : To the screen in which the number is input	XXXX (4 alphabetical characters)	Make selection by pressing the △ key and ▽ key. Press the ↓ key to go to each input screen.
Input the container I.D. (No.)	<input company<br="" of="" shipping=""/> name> I.dC	XXXX (4 alphabetical characters) The characters being selected blink. First, the leftmost character starts to blink.	Change the blinking character using the key and key. If the key is pressed, the blinking character moves to the right. If the key is pressed while the rightmost character is lit, the input is confirmed and the number input screen appears.
S	<input numbers="" of=""/>	XXXXXXX (7 numbers) The characters being selected blink. First, the leftmost character starts to blink	Change the blinking number using the key and key. If the key is pressed, the blinking number moves to the right. If the key is pressed while the rightmost number is lit, the input is confirmed.  Note: If the number is incorrect, the input cannot be confirmed and the screen in which the shipping company name appears.

#### **13. INPUT DATA MODE**) (Continued from the previous page)

		SET TIME	Press the key to go to the subsequent "Year" setting screen.
	20XX (The A.D. year currently set)	YEAR	The value can be increased or decreased by using the key and key. Press the key to confirm the selection and go to the subsequent "Month" setting screen.
Controller time input	XX (The month currently set)	MONTH	The value can be increased or decreased by using the key and when key key. Press the key to confirm the selection and go to the subsequent "Day" setting screen.
	XX (The day currently set)	dAY	Make the setting in the same manner as described above. Confirm the selection to go to the subsequent "Hour" setting screen.
	XX (The hour currently set)	HOUR	Make the setting in the same manner as described above. Confirm the selection to go to the subsequent "Minute" setting screen.
	XX (The minute currently set)	MINUTE	Make the setting in the same manner as described above.

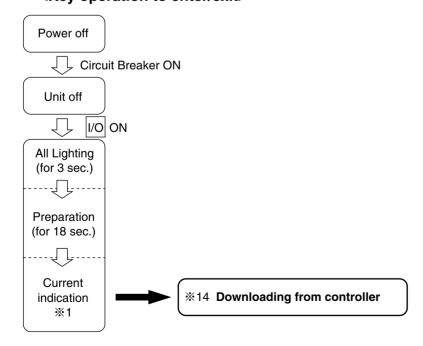

#### (14. CONTROLLER SOFTWARE DOWNLOAD MODE)

The data on personal computer and a controller are interchanged in this mode.

For details, see the Operation Manual for Personal computer software.

Downloading is possible even in "3. BATTTERY MODE". page 3-9.

#### <Key operation to enter/exit>

#### 3.3.2 Backup operation at the time of control sensor (SS, RS) abnormality

On the land of the	Alarm at the time of control	Operation at ea	ch control mode	Backup at the time of control sensor abnormality	
Control sensor	sensor abnormality	Chilled	Frozen	First stage	Second stage
SS	E401	Backup	Normal operation continued	DSS	RS-2.0°C
RS	E403	Normal operation continued	Backup	DRS	SS+5.0°C

SS : Supply air temperature sensor RS : Return air temperature sensor

DSS : Supply air temperature for data recorder DRS : Return air temperature sensor for data recorder

#### 3.3.3 Backup operation at the time of sensor abnormality

	Abnormal sensor	Mode	Backup operation method		
AMBS	Ambient temperature air sensor	All modes	Only abnormal indication (Operation continued)		
DCHS	Discharge gas	Chilled	Only abnormal indication (Operation continued)		
	temperature sensor	Frozen	Only abnormal indication (Operation continued)		
		Defrosting			
EIS	Evaporator inlet sensor	Chilled	Only abnormal indication (Operation continued)		
		Frozen	See the next page		
		Defrosting	Only abnormal indication (Operation continued)		
EOS	Evaporator outlet sensor	Chilled	Only abnormal indication (Operation continued)		
		Frozen	See the next page		
		Defrosting	Defrosting initiation: permission given at any time		
			Defrosting termination: terminating when the timer has		
			reached 100 minutes or EIS has exceeded 90°C or RS has		
			exceeded the set temperature		
SGS	SGS Suction gas temperature		Only abnormal indication (Operation continued)		
	sensor	Frozen	See the next page		
		Defrosting	Only abnormal indication (Operation continued)		
HPT	High pressure sensor	Chilled,	Only abnormal indication (Operation continued)		
		Frozen			
		Defrosting	Charge: Only abnormal indication (Operation continued)		
			Release: Executed by LPT		
LPT	Low pressure sensor	Chilled,	Only abnormal indication (Operation continued)		
		Frozen			
		Defrosting	Charge: Executed by HPT		
			Pump down: No pump down (Operation continued)		

#### ●Back-up for temperature sensors (EIS, EOS, SGS) at frozen mode (superheat control)

No.	Evaporator inlet sensor EIS	Evaporator outlet sensor EOS	Compressor suction gas sensor SGS	Back-up operation
1	Normal	Normal	Normal	superheat control
2	Normal	Normal	Abnormal	superheat control
3	Normal	Abnormal	Normal	Liquid refrigerant back prevention to compressor by EIS and SGS
4	Normal	Abnormal	Abnormal	Expansion valve fixed opening rate control
5	Abnormal	Normal	Normal	Liquid refrigerant back prevention to compressor by EOS and SGS
6	Abnormal	Normal	Abnormal	Expansion valve fixed opening rate control
7	Abnormal	Abnormal	Normal	Expansion valve fixed opening rate control
8	Abnormal	Abnormal	Abnormal	Expansion valve fixed opening rate control

#### 3.4 Back Up Battery

#### 3.4.1 Specifications

DECOS III e controller can use two types of batteries; DRY or Rechargeable (Optional).

The battery is attached to the lower part of the controller.

DRY Battery: 9V block battery. (This can be purchased locally.)
Rechargeable battery: Daikin genuine product (Part NO. 1890491)

#### 3.4.2 Function

This battery is used without main power supply for the following functions.

		1) Display wake up	2) USDA data log	3) Trip data log
DRY Battery (Purchased local	Battery	$\checkmark$	<b>✓</b>	
Rechargeable (Optional)		$\checkmark$	<b>✓</b>	Δ

 $<sup>\</sup>checkmark$ : Available  $\triangle$ : Varies according to customer specifications — : Not available

When commercial power supply is not available, backup battery can be used as power supply to display and set the following items.

Refer to 3.2.2 (3. Battery mode).

1) Display function

Return air temperature indication (RS)

Supply air temperature indication (SS)

Ventilation amount indication (FA)

USDA & CTS temperature indication

High pressure indication (HPT)

Low pressure indication (LPT)

Full-PTI record indication

Short-PTI operation day record indication

Chilled-PTI operation day record indication

Frozen-PTI operation day record indication

Remaining battery voltage indication (BAT)

2) Setting function

Control temperature setting (SP)

Control humidity setting (RH)

Defrosting interval setting (Def)

#### 3.4.3 Checking the remaining battery voltage

1) Checking the remaining battery voltage

The remaining battery voltage can be checked during operation in accordance with 3.2.2 (6. Sensor indication mode).

When the unit does not run or commercial power supply is not available, the remaining battery voltage can be checked in accordance with 3.2.2 (3. Battery mode).

The remaining voltage

7.6V or more: The battery has been charged.

7.5V or less: The battery may have deteriorated. It is recommendable to replace the battery.

7.1V or less: The battery has deteriorated. The battery must be replaced.

Things to keep in mind when checking the remaining voltage

Make sure that the unit has run for 14 hours at least or commercial power supply has recharged for 14 hours at least with the circuit breaker ON (the unit OFF) before checking the remaining voltage. Recharging for 14 hours at least is a must.

- Note 1: Because of the battery property, accurate remaining voltage cannot be obtained if not fully charged.
- Note 2: The remaining voltage during recharging, under the recharger's influence, is indicated (blinking) higher than it should be.
- 2) Rechargeable battery

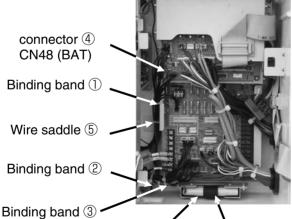

The battery life is approximately 2 years. In the event of using the battery for 2 years or more, data logging etc. may not be executed when the power is turned off even if the LCD screen indicates that the remaining voltage is 7.6V or more.

3) The remaining voltage for dry batteries can be checked, but replace the new ones before a voyage as needed basis such as refrigerated transport (USDA). Don't judge by the remaining voltage.

#### 3.4.4 Battery replacement (Rechargeable battery)

<How to replace the rechargeable battery>

- · Always turn off the main power supply to the facility before carrying out the following procedures.
- (1) Remove the controller and the binding bands (1) ~ (3) fastening the harnesses and the harness of the rechargeable battery.
- (2) Disconnect connector (4) from the CPU board.
- (3) Remove the harness of the rechargeable battery from wire saddle ⑤.
- (4) Remove Velcro tape 6 and rechargeable battery 7.
- (5) Replace the rechargeable battery with a new one. (Ensure that the battery of the specified type is used.)
- (6) Fix rechargeable battery 7 with Velcro tape 6 used for fixing the battery.
- (7) Securely attach the connector to connector 4 on the CPU board. (Refer to Note 1.)
- (8) Fix the harness of rechargeable battery ? and other harnesses to the controller unit with binding band 1). (Refer to Note 1.)
- (9) Pass the harness of rechargeable battery (7) through wire saddle (5), (Refer to Note 1.)
- (10) Bind the harness of rechargeable battery  $\bar{\mathbb{C}}$  and other harnesses with binding band  $\bar{\mathbb{C}}$ . (Refer to Note
- (11) Fix the harness of rechargeable battery 7 and other harnesses to the controller unit with binding band ③. (Refer to Note 2.)

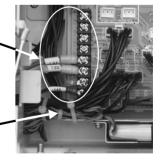

Note 1:

Pass the harness of the rechargeable battery behind the harnesses connected to the round solderless terminal block.

Note 2:

Bind the redundant portion of the harness of the rechargeable battery.

Rechargeable battery 7

Velcro tape fixing the rechargeable battery (6)

### Attention

- Remove the faulty battery and ensure that it is disposed of safely. Refer to next page for detail.
  - → A NiCd battery is used.
- The battery has to be removed before disposing of the unit.

#### FOR RECHARGABLE BATTERIES:

Batteries supplied with the refrigeration unit are marked with this symbol
This means that the batteries shall not be mixed with unsorted Household waste.

battery contains a heavy metal above a certain concentration. Possible chemical symbols are Cadmium Cd:lead(>0,002%)

Waste batteries must be treated at a specialized treatment facility. By ensuring waste batteries are disposed off correctly, you will help to prevent potential negative consequences for the environment and human health.

In addition, the used batteries, please send to our certified stores or the satellite parts centers as follows,

#### **FOR DRY BATTERIES:**

Batteries supplied with the refrigeration unit are marked with this symbol
This means that the batteries shall not be mixed with unsorted Household waste.
Waste batteries must be treated at a specialized treatment facility.

By ensuring waste batteries are disposed off correctly, you will help to prevent potential negative consequences for the environment and human health.

In addition, the used batteries, please send to our certified stores or the satellite parts centers as follows,

Please send batteries replaced in EU member nations to the following address.

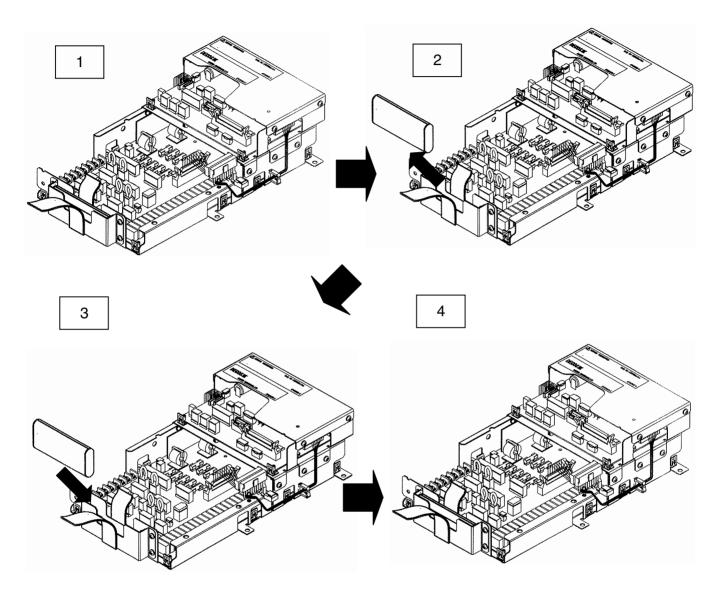

DAIKIN REFRIGERATION OFFICE

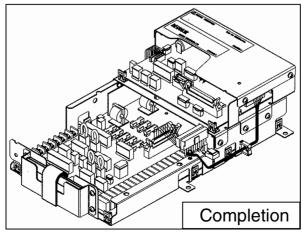

TITANIUMSTRAAT 41, 3067 GD, ROTTERDAM, THE NETHERLANDS

TEL: +31-(0)10-286-2090 FAX: +31-(0)10-286-2099

#### **EXCHANGE METHOD OF RECHARGEBLE BATTERIES:**

- 1. Peel the Velcro tape.
- 2. Take out the rechageble battery from holder.
- 3. Insert the rechageble battery to holder.4. Fix the rechargeble battery with Velcro tape.

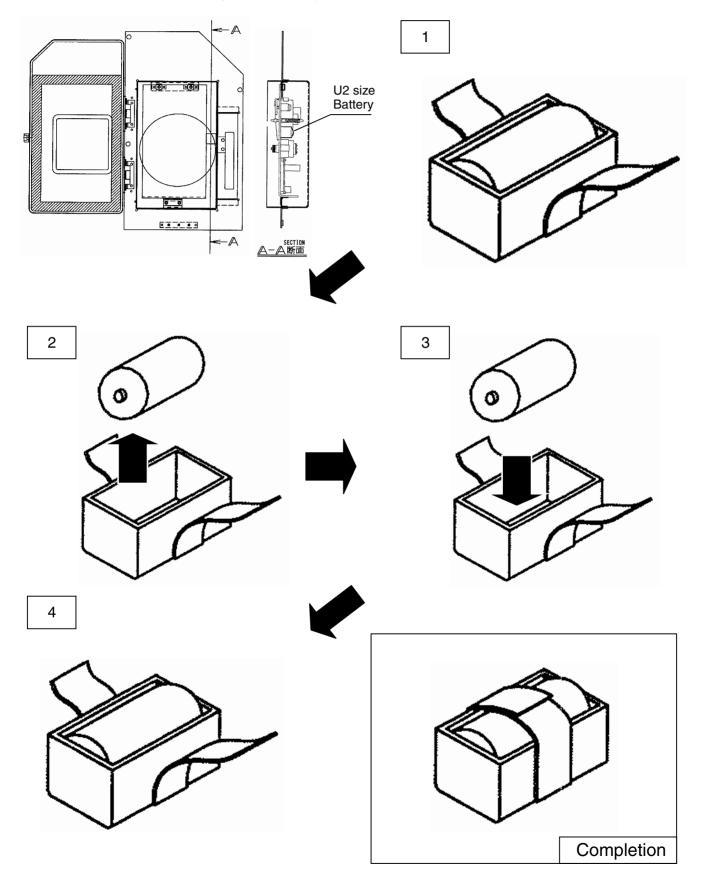

### **EXCHANGE METHOD OF U2 SIZE BATTERIES:**

- 1. Peel the Velcro tape.

- Take out the U2 size battery from holder.
   Insert the U2 size battery to holder.
   Fix the U2 size battery with Velcro tape.

### 3.5 Information interchange with personal computer

The electronic controller DECOS II e has a internal memory function to record the set point temperature, inside temperature, operation mode, occurrence alarm and the report of automatic PTI during transportation in addition to the normal operation control.

Also users can retrieve the logging data and operations condition of the unit and save the information on a personal computer through the serial communication port (personal computer receptacle) provided on the controller front panel. The retrieved data is useful to analyze any problems that occurred during transportation and to prepare various kinds of reports.

Moreover, users can up-load the information such as the container No., cargo name, destination and other information from their personal computer to the controller.

Refer to the Operation Manual for Personal Computer Software for detail.

### 3.5.1 Data logging

The data logging function is to store operation data which is generated during navigation.

There are seven kinds of logging data.

For Trip data, its logging interval can be selected from 15, 30, 60 (default) and 120 minutes.

\*When F. PTI is executed, the logging interval becomes default (Refer to clause 3.7.2.3)

### 3.6 Controller replacement and software upgrade

### 3.6.1 Controller replacement

### <Replacement procedure for the controller>

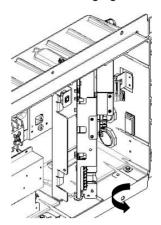

- Always turn off the main power supply to the facility before carrying out the following procedures.
- (1) Remove binding band  $\widehat{\ \ }$  fixing each harness to the controller unit.
  - Remove binding band 2 binding harnesses.
  - →Take care not to damage the harnesses.
- (2) Disconnect round solderless terminal ③ from the power supply I/O board. Disconnect the harness of terminal No.139 from wire saddles ④ and ⑤.
- (3) Disconnect connector (6) from the CPU board and the harness from clamp (7), respectively.
- (4) Disconnect connector (8) from the CPU board and the harness from wire saddle (4), respectively.
- (5) Remove the Velcro tape ① and remove dry cell battery or rechargeable battery ①.
  - → Properly store the removed battery for reuse.
- (6) Disconnect connector ② of the PT/CT board and the harness from clamp ③, respectively. Pull out connector ② from the inner side of the harness, and disconnect the harness from wire saddle ④.
- (7) Disconnect connectors (4) to (6) from the CPU board and power supply I/O board.
  - →It is not necessary to disconnect the short-circuit connector or empty connector.
- (8) Remove mounting screw (with washer) ①, mounting screw ®, spring washer ⑨ and toothed lock washer ② of the controller.
  - →Properly store the removed screws and washers for reuse.

(9) Replace the old controller with the new one.

Tilt the controller unit to take it out from or insert it into the control box. (Refer to the figure below.)

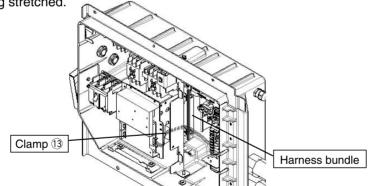

→Prevent the corner of the controller from damaging the harness or other parts.

- (10) Fix the new controller with mounting screw (with washer) ①, mounting screw ®, spring washer ⑨ and toothed lock washer ⑳.
  - →Ensure that the mounting screw, spring washer and toothed lock washer are installed in correct places.
  - →Tighten the screws securely and completely.
- (11) Insert connectors (4) to (6) into the CPU board and power supply I/O board.
- (12) Fix the harness of connector ② to wire saddle ④ and pass it behind the harness bundle. (Refer to the figure below.)

Insert connector 12 into the PT/CT board, and fix the harness to clamp 13.

→ When fixing the harness to the clamp, ensure that the sheet metal is not touched with the harness being stretched.

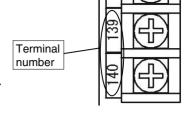

- (13) Fix dry cell battery or rechargeable battery ① with Velcro tape ①.
- (14) Fix the harness of connector (8) to wire saddle (4), and insert connector (8).
- (15) Insert connector (6) into the CPU board, and fix the harness to clamp (7).
  - → When fixing the harness to the clamp, ensure that the sheet metal is not touched with the harness being stretched.

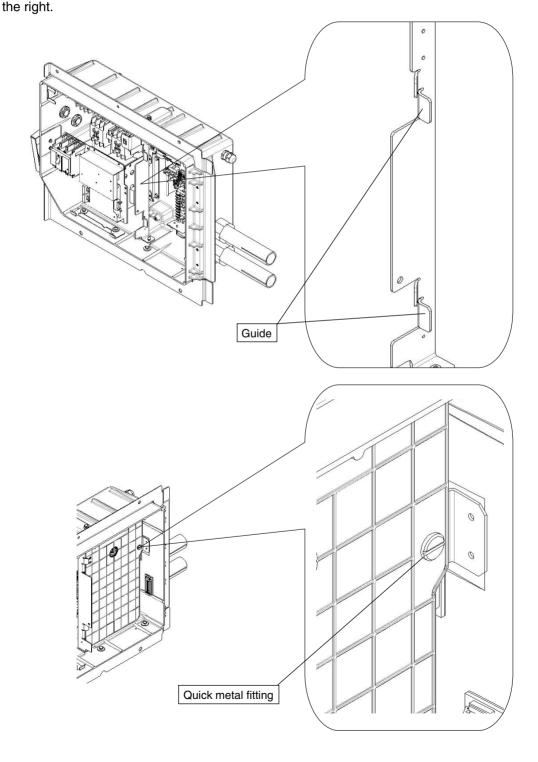

#### Attention (When inserting each connector)

- Do not directly touch the CPU board and power supply I/O board.
- Do not apply excessive load to the CPU board and power supply I/O board.
- Insert the connector securely by confirming its shape, direction, number of pins and color.
- →Otherwise, the connection may not function normally, proper connection may not be established, the board may be broken, or the connector may be lost during the transportation.

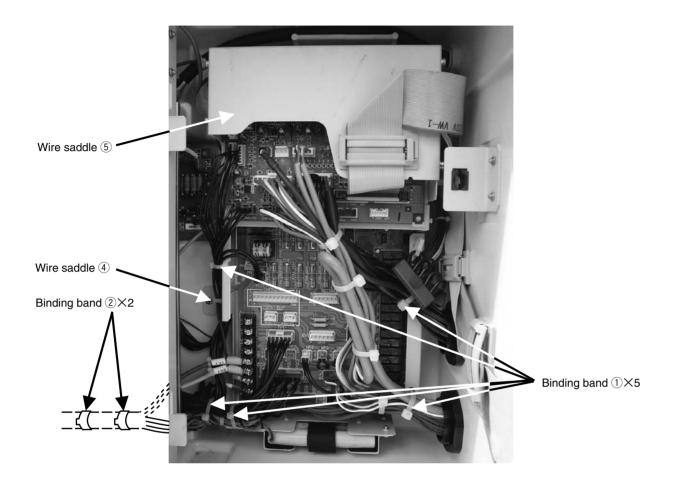

- (16) Attach the round solderless terminal to the power supply I/O board.
  - →Attach the terminal by checking the terminal number of the mark tube and the terminal number of silk print indicated on the power supply I/O board. (Refer to the figure below.)
  - →Tighten the screws securely and completely.

    Fix the harness of terminal number 139 to wire saddles ④ and ⑤.
- (17) Bind the harnesses with binding band 2.
  - Fix each harness to the controller unit with binding band ①.
- (18) Mount the controller cover. (Refer to figure below.) Place the cover on the front side of the cover guide. Fix the cover by tightening the quick metal fitting with a quarter turn to

### <Wiring completed after replacement>

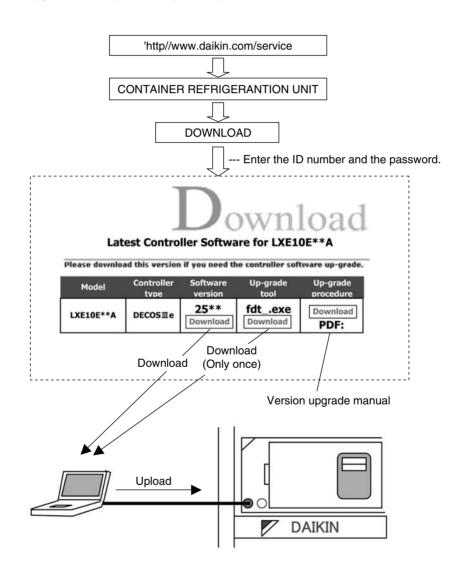

### 3.6.2 INSTALLATION OF SOFTWARE OF LATEST VERSION (VERSION UPGRADE)

#### Items required

- 1. Personal computer (with Windows 2000 or Windows XP installed)
- 2. Communication cable
- 3. Tool for software version upgrade (fdt\_4\_00\_2.exe)
- 4. Software for controller DECOS III e (25\*\*.mot)

After the replacement with the spare parts controller, the software needs to be upgraded. Download the software of the latest version and the tool for version upgrade (only once) from the DAIKIN HOME PAGE by following the procedure shown below.

Note: The unit is operated by using the software already installed in the controller. However, ensure that the software is upgraded to implement optimal operation.

Never turn the power OFF or disconnect the battery connector while the software version upgrade is in progress. Otherwise, the software version upgrade will fail.

In such a case, retry the software version upgrade.

3-39

### 3.7 Pre-trip inspection

Perform a pre-trip inspection of each component and take remedial actions if necessary so that the
unit will operate normally. The following is the items necessary for a pre-trip inspection, but those
surrounded with a frame can receive an automatic PTI

#### (1) Appearance inspection of unit

- 1) Physical damage
- 2 Casing insulation through penetration
- 3 Drain hose (dust and clogging)
- 4 Power cable and plug damage
- 5 Condition of refrigerant piping fasteners.
- (6) Condition of each sensor installation
- ① Loose mounting sections
  - · Bolts and nuts ---- Casing frame, compressor, fan motor, control box and temperature recorder box
  - · Cable glands ---- Control box
- ® Conditions of control box cover packing (water-proof) and temperature recorder box cover packing (water-proof)
- 9 Magnetic contactor contact point for burning out.

#### (2) Inspection before unit operation

① Refrigerant leakage inspection

② Power voltage inspection (Automatic PTI range)

#### (3) Operation inspection of safety device and control equipment

① Safety device HPS ----- Measurement of the actuating pressure by stopping the condenser fan motor.

② Control equipment | Solenoid valve ----- Inspection of operation (open and close) and leakage

EFM ----- Speed switchover and rotating direction

EV, SMV ----- Inspection of operation (open and close) and leakage

#### (4) Operation in each mode

① Pull-down  $\rightarrow$  0°C Pull-down time, voltage and current

② Chilled control 0°C Electronic temperature Return, supply air temperature differential, voltage and current

recorder calibration

3 Defrosting
Defrosting time

④ Pull-down → -18°CPull-down time, evaporator fan motor speed switchover

⑤ Frozen control −18°C Electronic temperature |(Temperature differential and rotating direction)

recorder calibration ON/OFF, voltage and current

Remaining frost inspection

#### (5) PTI report preparation

### 3.7.1 Manual inspection

<sup>\*</sup> The service life of the wake-up battery is approx. one year (Dry battery). For USDA transportation, replace the battery with a new Dry battery when PTI is performed.

#### 3.7.2 Automatic PTI

Automatic PTI enable conditions

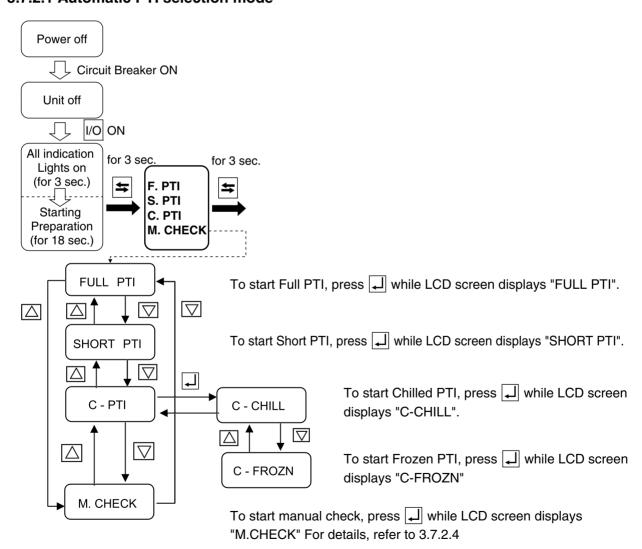

43°C≥ambient temperature≤-10.0°C

An accurate result of the PTI may not be provided if the ambient temperature is above 43°C or below –10°C. Alarm J501 will be indicated except for Short PTI

● Automatic PTI includes Short PTI, Full PTI, Custom PTI (Chilled PTI, and Frozen PTI)

PTI		Content		
Short PTI		Performed in order to find component abnormalities. It continues even if component		
		abnormalities are found. But it terminates as soon as the compressor failure is detected		
Full PTI		Short PTI, Chilled PTI and Frozen PTI are performed.		
		It terminates as soon as abnormalities are found after the completion of Short PTI		
	Chilled	Short PTI and Chilled PTI are performed.		
Custom	PTI	It terminates as soon as abnormalities are found after the completion of Short PTI		
PTI	Frozen	Short PTI and Frozen PTI are performed.		
	PTI	It terminates as soon as abnormalities are found after the completion of Short PTI		

#### 3.7.2.1 Automatic PTI selection mode

### 3.7.2.2 Short PTI (S.PTI)

#### Step display and content

<sup>¾1 If the ambient temp is -10°C or lower, the function check of the solenoid valve cannot be preformed correctly, short circuit the terminals 121 and 102 on the terminal board, and check the operation of the solenoid valve.</sup> 

<sup>%2</sup> If the difference between ambient temperature and return air temperature is 15°C or higher, these steps will be skipped.

%3 Step No. are indicated	in LED display.		Custom PTI	Custom PTI
Evennley Cten No. 10	Short PTI	Full PTI	Frozen PTI	Chilled PTI
Example: Step No.10				

### 3.7.2.3 Alarm list during PTI (Pre-Trip Inspection)

The alarm during automatic PTI are concerned with PTI inspection items in addition to those during normal operation.

The alarms at automatic PTI are indicated in J \*\* \*\* \*., being separated from those during normal operation.

There are some alarms which are not displayed on the control panel, however, they can be checked referring to the PTI report.

Check NO. (LED display)	Check content	Alarm Indication (LED display)	Alarm content	S.PTI	F.PTI C.PTI	Remarks
P00	Basic data	No indication	Check basic-data	1	1	
P02	All sensor	Same as normal operation	Check basic-data			
P04	Power supply	No indication	Check basic-data			
P05	Starting	J051	Compressor malfunction			
P06	HPS	J061	Abnormal OFF value			
	"	J062	Not recovered (Not reset)			
	"	J064	High pressure does not rise.			
	"	J065	High pressure does not drop.			
P08	Pump-down	J081	Long pump-down			
P10	Liquid solenoid valve	J101	Valve leakage			
P12	RS, SS accuracy	J121	Sensor deterioration			
P14	HPT, LPT accuracy	J141	Sensor deterioration			
P16	Evaporator fan motor	J161	Evaporator fan motor malfunction			
P20	Economizer solenoid valve	J201	Economizer solenoid valve malfunction			
P22	Discharge gas by-pass solenoid valve	J221	Discharge gas by-pass solenoid valve malfunction			
P24	Defrost solenoid valve	J241	Defrost solenoid valve malfunction			
P26	Operation	No indication	Judged with P28			
P28	Suction modulating valve	J281	Suction modulating valve does not activate			
P29	Electronic expansion valve	J291	Long pump-down			
P30	Injection solenoid valve	J301	Injection solenoid valve malfunction			
P32	Hot-gas solenoid valve	J321	Hot-gas solenoid valve malfunction			
	Reheat coil solenoid valve	J322	Reheat coil solenoid valve malfunction	+		
P50	Pull-down cooling capacity	J501	Out of ambient temperature conditions			Press the
P50	0°C pull-down check	J502	Long pull-down time			select key for
P60	0°C holding check	No indication				3 seconds to
P70	Defrosting	J701	Out of starting conditions			restart when
		J702	Long defrosting time			alarms are
P80	Pull-down cooling capacity	J801	Long pull-down time			displayed in
P90	–18°C control	No indication			↓	J code

Refer to section 6.3 for more information.

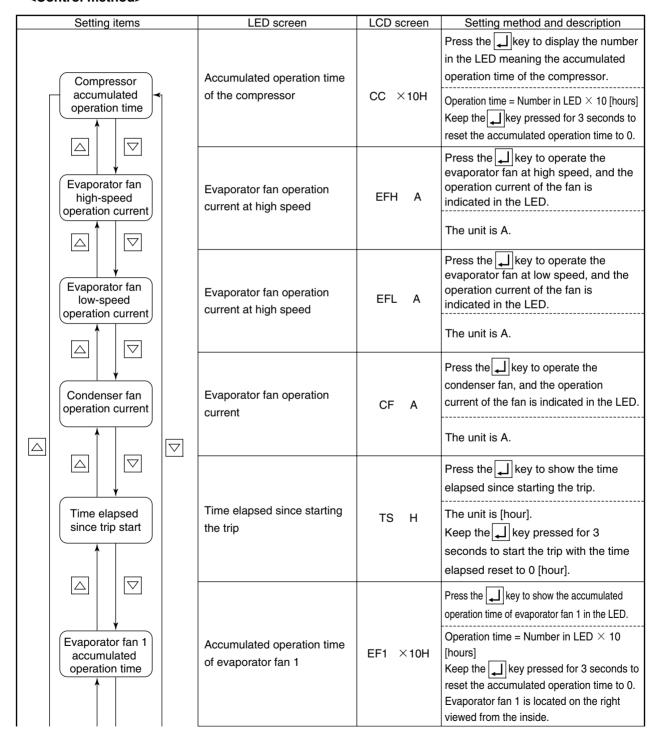

#### 3.7.2.4 Manual check (M.CHECK)

In M. CHECK, each functional component is inspected. However, unlike in S.PTI and F.PTI, there is no alarm indication etc.

#### <Inspection items>

Compressor operation time, evaporator fan high-speed operation current, evaporator fan low-speed operation current, condenser fan operation current, battery lifespan (number of years or months), horsepower indication, time elapsed since starting the trip, operation time of evaporator fans 1 & 2, operation time of the condenser fan, and software version

#### <Control method>

Evaporator fan 2 accumulated operation time	Accumulated operation time of evaporation fan 2	EF2 ×10H	Press the key to display the accumulated operation time of evaporator fan 2 in the LED.  Operation time = Number in LED × 10 [hours]  Keep the key pressed for 3 seconds to reset the accumulated operation time to 0. Evaporator fan 2 is located on the left viewed from the inside.
Condenser fan accumulated operation time	Accumulated operation time of the condenser fan	CF ×10H	Press the key to display the accumulated operation time of the condenser fan in the LED.  Operation time = Number in LED × 10 [hours]  Keep the key pressed for 3 seconds to reset the accumulated operation time to 0.
Controller software version display	Software version	SOFTVER	Press the key to display the software version in the LED.
FA calibration	Ventilation amount (FA)	FA CAL	Ventilation amount(FA) is indicated in LED when pressing If ventilation amount is indicated despite the ventilator exit totally closed, press for 3 seconds to calibrate to ventilation amount zero.

### 3.8 Chartless function

The controller provides the temperature recorder function.

In the case of recorder-equipped units, checking for the temperature on the chart recorder will provide ease of monitoring the state of the trip.

Since recent controllers are available for long and accurate temperature recording, non-recorderequipped units have been increasingly used. In this case, in place of the recorder, the following three "Chartless functions" are available.

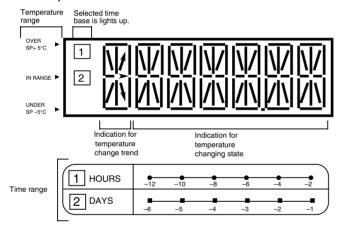

- · Chart Indication Function
- · Pull Down Time Indication Function
- · Chartless Code display Function

#### 3.8.1 Chart indication function

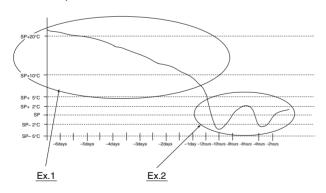

The temperature record data is indicated in a graphic chart on the LCD panel in the chart indication mode.

- The displayed log period is selected from 12 hours ( HOURS on the time base) or 6 days ( DAYS on the time base).
- The displayed intervals are 2 hours for 12 hours log ( HOURS) and one day for 6 days log ( DAYS).
- · The indication of the data during the defrosting is flickered, and the indication of the other chart data is lit on.

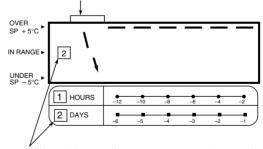

#### LCD panel

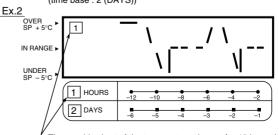

#### Example of chart indication

The arrow indicates the temperature change trend when all segments are in the same temperature range

The graphic chart of the temperature change for 6 day log (time base : 2 (DAYS))

The graphic chart of the temperature change for 12 hours log (time base : 1 (HOURS))

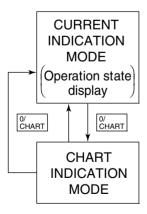

- Displaying temperature change trend:
- · The temperature change trend is shown in the leftmost LCD.
- · However, this display is shown only when all segments are in the same temperature range.

Trend indication	Condition				
Temperature rise trend	The latest the oldest data on the data on the chart the oldest > % set point of H001 (ALARM indication setting)				
Temperature stable tendency	The latest the oldest data on the data on the chart chart chart				
	the oldest data on the - data on the chart  The latest <pre></pre>				
Temperature fall tendency	the oldest  The latest data on the - data on the chart  The latest > set point of H001				

<sup>\*</sup>The trend display varies depending on the setting of H001.

For details about the setting of H001, refer to page 3-22 $\sim$ 23, "OPTIONAL CONDITION SETTING MODE."

#### < Operation procedure >

To shift to the chart indication mode, press the  $\frac{0}{CHART}$  key while the unit is in the current indication mode.

In the chart indication mode, the LCD displays a simple graphic chart.

The ordinate at the left side of LCD screen for temperature base and the abscissa at the bottom of LCD for time base are indicated.

The No. indicated at the time base is the same as the No. on the left most of the LCD, which indicates the simple graphic chart is of 12 hours log or 6 days log indication.

When the  $\frac{0}{CHART}$  key is pressed, the unit goes back to the current indication mode.

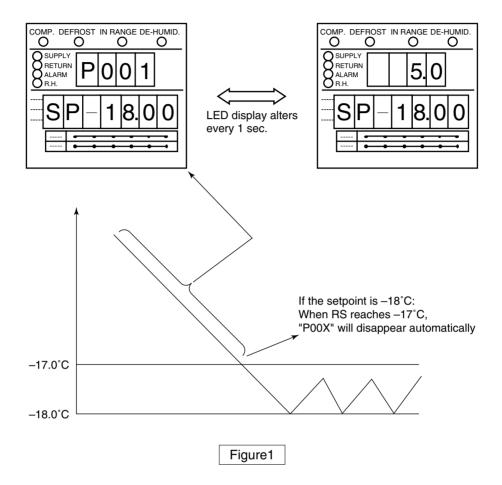

### 3.8.2 P code (Pull down time indication)

The control temperature and pull-down time are indicated alternately during pull-down operation.

When the pull-down is completed, the P code will be deleted.

P001: Lasts the pull-down for 1 hour.

P002: 2 hours passed since pull-down started.

### 3.8.3 Chartless code display function

The chartless code represents the coded inside air temperature.

Select "ON" of the chartless code setting to indicate the code on the LED.

For the chartless code setting, refer to the "OPTIONAL CONDITION SETTING MODE" on the page  $3-22\sim3-23$ .

- · P code: Indicates the pull-down time.
- · H code: Indicates the abnormal temperature records.
- · d code: Indicates the operation history.

#### 3.8.3.1 List of chartless code

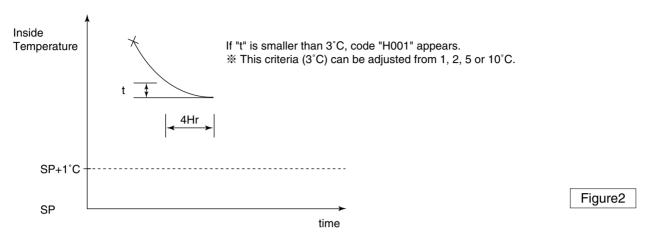

C: chilled mode, F: Frozen mode

	Code	Description	Operation mode	Figure
	H001	The alarm is displayed when the control temperature does not decrease by 3°C or more for every 4 hours during pull-down operation.	C, F	2
p.d	H002	The alarm is displayed when the total out-of- in-range reaches 2 hours.  (Count is not performed during defrosting.)	C, F	3
ure reco	H003 The alarm is displayed when the integrated time of state "below SP-1°C" reaches 2 hours.		С	4
emperat	H004	The alarm is displayed when the integrated time of state "below SP-2°C" reaches 2 hours	С	4
Abnormal temperature record	H005	The alarm is displayed when the control air temperature is Out-of -In-Range and defrosting was performed successively (three times) while the control air temperature does not return to in-range.	C, F	5
	H006	The alarm is displayed when the integrated time of difference 2 °C or more between control sensor data and record sensor data reaches to one hour or more.	C, F	6
	d3XX	When the total time above set point $+3^{\circ}$ C reaches 1 hour, $XX = 01$ will be displayed.	C, F	7
story	d2XX	When the total time above set point $+2^{\circ}$ C reaches 1 hour, $XX = 01$ will be displayed.	C, F	7
Opreration history	d1XX	When the total time above set point $+1^{\circ}$ C reaches $1 \text{ hour}$ , $XX = 01$ will be displayed.	C, F	7
Opre	d–1X	When the total time below set point $-1^{\circ}$ C reaches $1$ hour, $XX = 01$ will be displayed.	C, F	7
	d–2X	When the total time below set point $-2^{\circ}$ C reaches 1 hour, $2X = 21$ will be displayed.	C, F	7
	PXXX	XXX: When the total pull-down time reaches one hour, an indication XXX=001 appears.	C, F	1

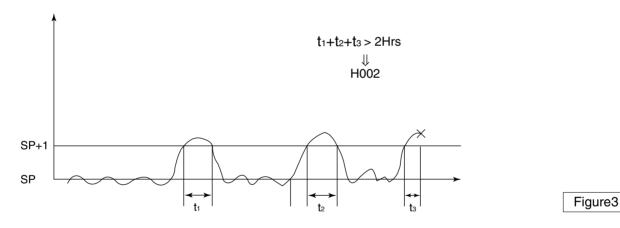

- Note 1) The <u>encircled</u> setting can be changed. The setting in the <u>box</u> varies according to the <u>encircled</u> setting.
- Note 2) To delete the H code or d code, press the  $\square$  key for 3 seconds during the relevant code indicated.
- Note 3) H code and d code are deleted when the power supply is turned off for 3 days.

#### 3.8.3.2 H-code

=The alarm is displayed when the control temperature does not decrease by (3°C) or more every 4 hours during pull-down operation.

H002 =The alarm is displayed when the total time out of "in-range" reaches 2 hours. (Counting is not performed during defrosting).

H003 =The alarm will be displayed when the total time below setpoint -1°C reaches 2 hours.

H004 =The alarm will be displayed when the total time below setpoint –2°C reaches 2 hours.

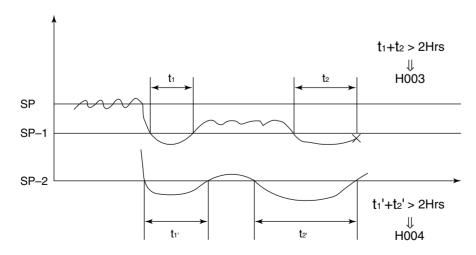

Figure4

H005 =The alarm is displayed when the control air temperature is out of "in-range" and defrosting was performed three times while the control air temperature does not return to in-range.

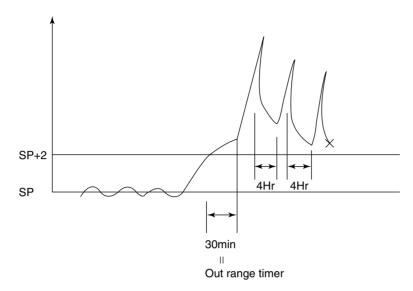

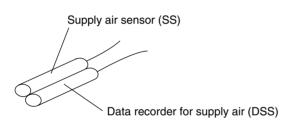

Figure5

H006 =Alarm is displayed when the temperature difference between the control sensor and record sensor is 2°C for 1 hour, or more.

| DSS–SS | > 2°C→ | H006

Figure6

#### 3.8.3.3 d-code:

The d-code shows the current operation state of the unit.

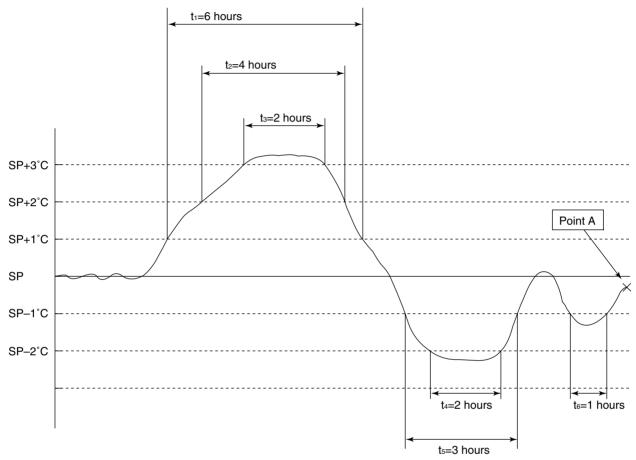

#### Example d101:

• This code "d101" will be displayed when the total time above set point +1°C reaches 1 hour.

The code "d102" will then be displayed when the total time above set point +1°C reaches 2 hours.

#### Example d-21:

• This code "d-21" will be displayed when the total time below set point –2°C reaches 1 hour. The code "d-22" will then be displayed when the total time below set point –2°C reaches 2 hours.

Example: If inside temperature was recorded above graph, controller shows the following "d code" when user check the code at "point A"

d106 (above setpoint +1°C for 6 hours)

d204 (above setpoint +2°C for 4 hours)

d302 (above setpoint +3°C for 2 hours)

d-22 (below setpoint -2°C for 2 hours)

d-13 (below setpoint -1°C for 3 hours)

d-11 (below setpoint -1°C for 1 hour)

Figure7

### 3.9 Communication modem

DECOS  $\blacksquare$  e controller has function to transmit operation data through power line, if slave modem is provided in control box.

The slave modem shall be complied with ISO10368. The following items can be monitored and/or commanded via master modem: (\*1)

	Item	Description			
1	Inquiries (Remote monitoring)	<ul> <li>Inside temperature and humidity</li> <li>Set point temperature</li> <li>Defrosting interval</li> <li>Container No.</li> <li>Logger header information</li> <li>Alarm</li> <li>Operation mode</li> </ul>	<ul><li>Sensor data</li><li>Trip data</li><li>Alarm data</li></ul>		
2	Commands (Remote control)	<ul><li>Set point temperature changing</li><li>Defrosting interval changing</li><li>Manual defrosting initiation</li></ul>	<ul><li>Container No. changing</li><li>Unit ON/OFF changing</li><li>Header information changing</li></ul>		

<sup>(\*1)</sup> According to the relationship among slave modem, Master modem and controller, items which can monitor and/or command are different. Please contact DAIKIN sales office if you have a specific item to monitor/command.

### 4. SERVICE AND MAINTENANCE

### 4.1 Maintenance service

### 4.1.1 Collection of refrigerant

- ①When releasing the refrigerant from the refrigerant system, be sure to use a refrigerant recovery unit to protect the ozone layer around the earth from depletion.
- ②Observe strictly all the environmental laws relating with to the country where the repair service is conducted.

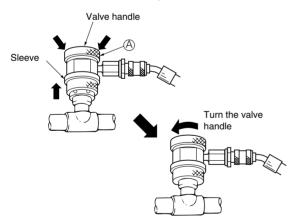

### 4.1.2 Gauge manifold

#### (1) Attaching the gauge manifold

Turn the valve handle of coupler counterclockwise (the push pin is pulled up). Slide the sleeve upward, and press it against the service port. Then, securely push the valve handle (section A) until a click sound is heard. After the coupler is inserted into the service port, release the sleeve. The coupler is fixed so that it is not detached from the service port.

Next, turn the valve handle clockwise.

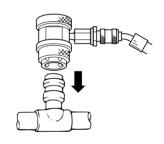

Lower the push pin, and open the check valve at the service port.

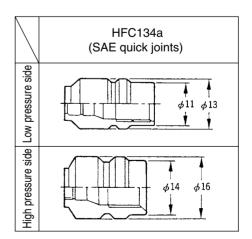

Note: Do not fully turn the valve handle clockwise. Otherwise, the push pin may be broken.

### **!** CAUTION

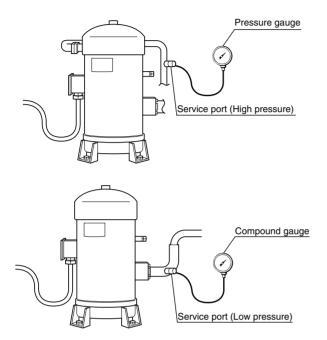

- Use the pressure indicating function of the controller to check the working pressure as much as possible instead of using the gauge manifold in order to prevent foreign particles or moisture from mixing into the refrigerant system.
- Do not use any pressure gauge, gauge manifold, charge hose and charging cylinder that has been used for CFC12 in order to prevent refrigerant or refrigerant oil of a different kind from mixing.
   Use the exclusive tools for HFC 134a.
- 3. The service port of quick joint type is provided to make improved handling.

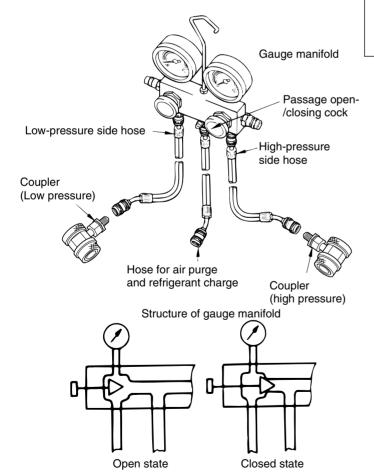

Be sure to use the gauge manifold with the quick joints shown above.

 Location of service ports on high pressure and low pressure sides
 Service ports on high pressure and low pressure sides are located as shown below.

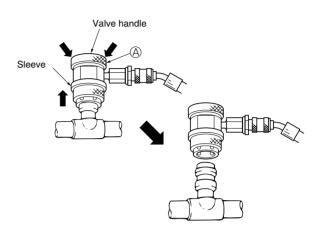

Open and closed states of gauge manifold

#### (2) Removal of gauge manifold

Turn the valve handle of coupler counterclockwise (the push pin is pulled up). Slide the sleeve upward while fixing the valve handle (section A) to disconnect the quick joint from the service port.

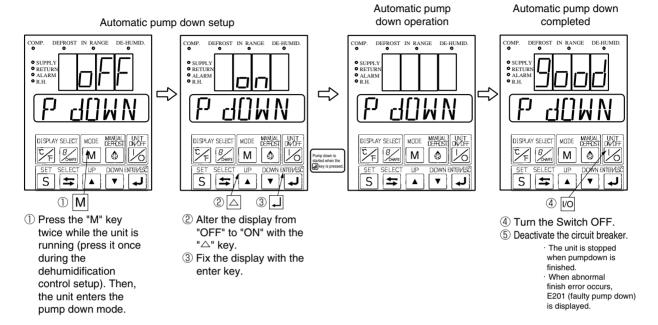

Be sure to attach the cap to the service port after the removal of the manifold.

### 4.1.3 Automatic pump down

An automatic pump down system is applied to the unit to prevent the unit from extra decrease of low pressure due to pump down operation or burning of scroll compressor due to a closed stop valve.

#### (1) Access to automatic pump down operation mode

#### (2) Use of automatic pumpdown

- [1] Replacement of dryer
  - \*After the automatic pumpdown operation is completed, pressure in the pipe in and out of the dryer is slightly higher than the atmospheric pressure.

Thus, although no ambient air will enter into the piping, even when the dryer is replaced, replace it quickly in a short period. (For details, see clause 4.2.6)

\*\*Therefore, the system inside does not need to be dried with vacuum after the dryer is replaced.

#### [2] Recovering refrigerant

 $\Re$ Before recovering refrigerant, execute the automatic pump down operation.

(As for the details, see (2) of clause 4.1.4)

#### [3] Charging refrigerant (third step)

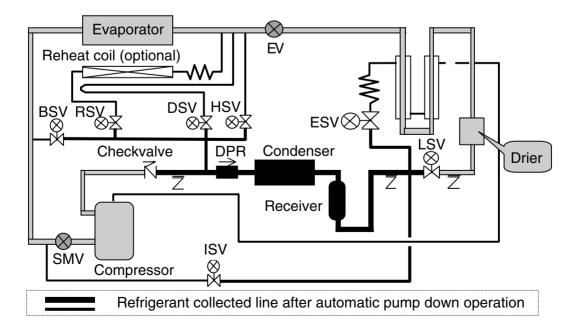

If the ambient temperature is low, and the refrigerant cannot be charged to the specified
 amount because of pressure balance, execute the automatic pump down operation. (As for the
 details, see (3) of clause 4.1.4)

#### (2) Automatic pump down operation

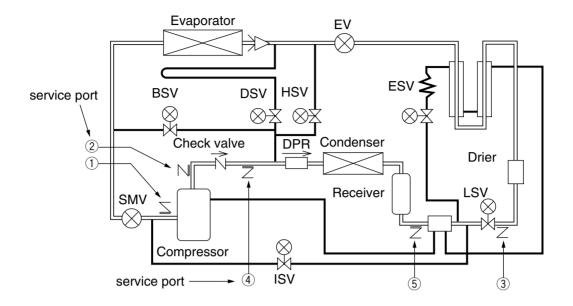

Once the automatic pump down is started, all of the service works from refrigerant collection into the receiver, to the equalizing in suction piping system, can be executed automatically. When "Good" is displayed, service works such as replacing the dryer, etc. can be conducted without any other operation.

Step	1)	2	3	4	(5)
	[Preperation]	[Pump de	own] ※2	[Pressure	[Termination]
	Turn on	Pump down	Compressor	equalizing]	EV full close
	Automatic pump	start	stop for 20	All stop for 40	EV IUII CIOSE
	down.		seconds.	seconds.	
	Normal operation	Compressor			Termination
	for 30 minute	stop at		Prevention of air mixing	"GOOD"
	<b>*</b> 1	LP≦-55kPa		(vacuum) in the system	
COMP	ON	ON	OFF	OFF	OFF
EFM	High speed	High speed	High speed	OFF	OFF
CFM	ON	ON	ON	OFF	OFF
LSV	ON				
ESV		ON			
ISV				ON (2nd) ※3	
HSV				ON (1st) %3	
DSV					
BSV					
RSV					
SMV	328pls(100%)	328pls(100%)	328pls(100%)	328pls(100%)	328pls(100%)
EV	77pls(18%)	146pls(34%)	146pls(34%)	146pls(34%)	Opls(fullclose)

- ※1. If HPT exceeds 1700 kPA, no operation is executed for thirty seconds.
- ※2. The pumpdown operation described in② ⇒ ③shown in the table above is repeated depending on the status 20 seconds after the compressor is stopped (three times, maximally).
- ※3. If LPT exceeds 0 kPa 40 seconds after the unit is stopped completely, next operation of shifting from "HSV ON" to "ISV ON" is not executed.

### 4.1.4 Refrigerant Recovery and Charge

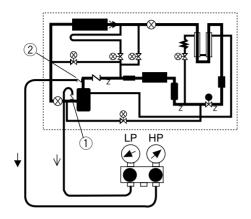

Service work		Service port	Remarks
Pressure Check	High pressure	2	
	Low pressure	1	
Refrigerant recovery and charge (R134a: 5.2kg)	[1] Refrigerant Recovery	(5)	Recover refrigerant from port (5) after operating Automatic Pump-Down first.
		4 & 5	Recover completely the refrigerant left in the unit port 4 & 5.
	[2] Vacuum & Dehydration	4 & 5	After recovering, vacuum from port 4 & 5.  *The connection at port 4 is same size at 1 for low pressure.
	[3] Liquid charging	⑤→③※	After vacuuming, charge liquid refrigerant from ⑤ first and them from ③.  If not reached to the specified
		3**	amount 5.2 kg, go to next below.  1. Operate Automatic Pump-Down first and stop it using ON/OFF switch after the compressor stops during the Auto pump down operation.  2. Charge liquid refrigerant from port ③.

Note) \* Charging liquid refrigerant from ① causes malfunction of the compressor.

### (1) Operation Pressure Check

Check high pressure from the service port ② on the compressor discharge. Check low pressure from the service port ① on the compressor suction.

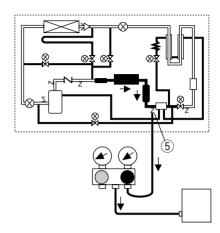

#### (2) Recovery non-condensable gas

If the air or other non-condensable gases are present in the refrigeration system, they will gather in the condenser and the pressure inside the condenser will rise significantly and the thermal conductivity of the condensing surface will be decreased, resulting in deterioration of refrigeration performance. Therefore, it is very important to eliminate the non-condensable gases. If the discharge pressure is abnormally high and the pressure is not normalized, check whether the air or other non-condensable gases are present by following the procedure below.

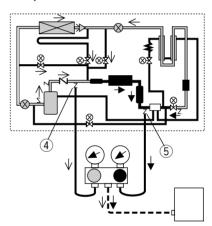

●After carrying out the automatic pumpdown operation to collect the coolant in the liquid receiver, stop the unit once. Operate the condenser fan in accordance with the condenser fan check procedure included in the manual check procedure, and wait until the cooling air inlet and outlet temperatures become equal. Noncondensable gases are present if there is any difference between the saturation pressure and the condensation pressure corresponding to the temperature of the cooling air.

#### (3) Refrigerant Recovery

- 1)Operate Automatic Pump Dpwn.
- 2 Recover refrigerant from port 5.

③Recover completely refrigerant left in the unit from ports ④ & ⑤.

### (4) Vacuum-dehydrating, and refrigerant / charging

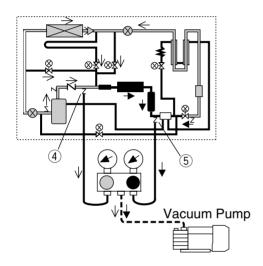

If all the refrigerant has leaked out and air is intermixed in the refrigeration circuit, remove the cause of trouble and carry out vacuum-dehydrating. Then charge the specified amount of refrigerant.

[Required tools]

- Refrigerant cylinder (content of 20kg) equipped with joint for HFC134a
- 2. Gauge manifold with quick joints
- 3. Weighing scale (up to 50kg)
- 4. Vacuum pump

#### (a) Vacuum dehydrating

After recovering the refrigerant, replace the filter drier and connect the vacuum pump to the service ports 4 and 5 at the liquid receiver outlet piping and discharge pressure regulating valve inlet, and then vacuum up to 76cmHg. Disconnect the vacuum pump, holding the refrigerant circuit in the vacuum state. However, if air enters in the refrigerant circuit, vacuum up the circuit to 76cmHg and then vacuum the circuit for another 2 hours or more.

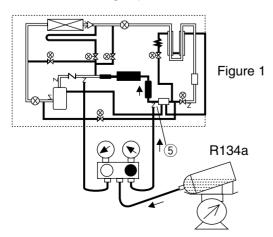

### (b) Cylinder weight recording

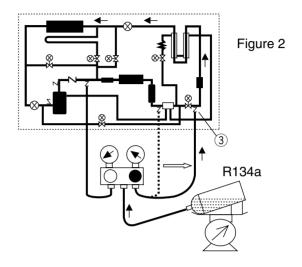

Place a refrigerant cylinder on the weighing scale, and record the weight of the cylinder.

#### (c) Charging of liquid refrigerant

After vacuum & dehydration, charge the liquid refrigerant from port 5.
 (Aprrox. 50% of the specified amount will be charged.)

2.Replace the manifold gauge hose to port ③ and add the liquid refrigerant. Then if it reached to the specified amount close the cock of the refrigerent cylinder.

If it is not reached to the specified amount due to the pressure valance, close the cock of the ref. cylinder and go to next 3 & 4.

- 3.Operate Automatic Pump Down first. When the compressor stops during the operation, end the Auto. P. D. operation using Unit ON/OFF switch.
- 4.Open the cock of the ref. cylinder and add the liquid refrigerant from port ③. Then if it reached to the specified amount close the cock of the ref. cylinder.

### **CAUTION**

Carry out the operation check after the replacing and charging of refrigerant, then replace the drier.

### 4.2 Main components and maintenance

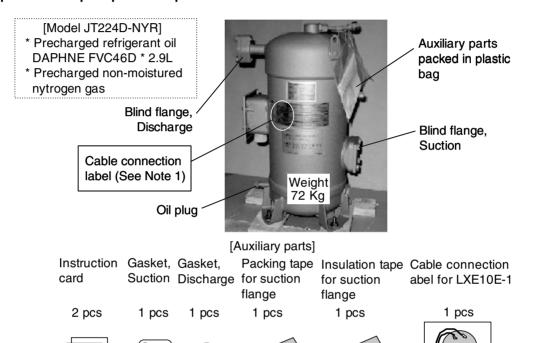

### 4.2.1 Scroll compressor

The compressor is of a hermetic scroll type with the built-in motor so that there are less places where refrigerant may leak. No refrigerant oil is required when the unit is new because it has been charged before delivery.

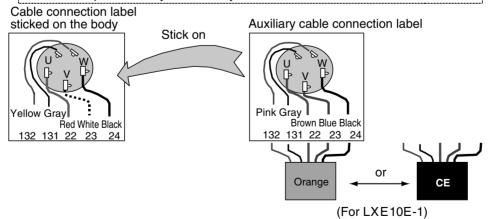

# Flare nut for injection piping Discharge flange Flare nut for gauge piping Flare nut for gauge piping

(See Note 1)

#### (1) Preparation of spare parts compressor

Note 1. Stick the auxiliary cable connection label onto the label sticked on the compressor body. This is only for LXE10E-1.

Note 2. Don't drop the precharged refrigerant oil out after removing the blind flanges.

The preparation of refrigerant oil is not required. The compressor has been charged with the oil.

#### (2) Removal of compressor

Recover refrigerant

- 1. Recover the refrigerant from service port 4 on discharge line and (5) at receiver/water cooled condenser outlet. (Refer to the clause 4.1.4 Refrigerant Recovery and charge)
- 2. Close the discharge and suction side stop valves on the compressor.

**Disconnect** cables and mounting bolts

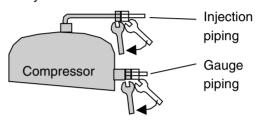

- 3. Switch off the power.
- 4. Open the terminal box cover and disconnect the cables.

5. Remove the mounting bolts.

Disconnect pipings

6. Remove the flare nuts for the injection piping on the compressor head and gauge piping on the body.

Attention! Use double wrenches when the flare nuts are removed.

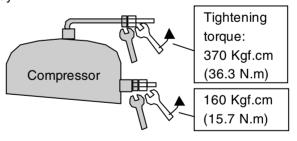

- 7. Remove the insulation tape fixed on suction flange and discharge
- 8. Remove the bolts for suction and discharge flange.

#### (3) Installation of compressor

Connect pipings and

- 1. Before connecting pipings, insert and screw in the mounting bolts slightly.
- bolts
- fix mounting 2. Tighten the flare nuts for the injection piping and gauge piping on the body.

Attention! Use double wrenches when the flare nuts are tightened.

- 3. Fix the suction and discharge flanges using with the auxiliary gaskets and the bolts.
- 4. Tighten the mounting bolts.

Tightening torque 257 Kgf.cm (25.2 N.m)

435 Kgf.cm (42.7 N.m)

#### Connect cables

5. Connect the cables to the terminals.

Attention!	Pay attention to the cable connection.		
	Incorrect wiring may run the compressor		
	in wrong direction and may cause burn out.		

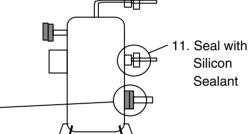

### Charge refrigerant

- 6. Open the discharge and suction side stop valves.
- 7. Vacuum and dehyadrate from service port 4 and 5.
- 8. Then charge the refrigerant from service port ⑤ and ③. (Refer to the clause 4.1.4 Refrigerant Recovery and charge)
- 9. Check gas leakage especially at sunction/discharge flanges and flare nuts for injection piping/gauge piping.

10. Fix the auxiliary insulation tape and fix the auxiliary packing tape using clamp band to the sunction flanges.

11. Seal with silicon sealant around the flare nut for gauge piping.

10. Fix the auxiliary insulation tape

### **CAUTION**

The preparation of refrigerant oil is not required.

The compressor has been charge with the oil.

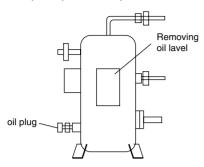

### **CAUTION**

The unit does not have suction stop valve. Be sure to adhere packing tape at suction piping section to prevent moisture from entering.

### (4) Removal of excess refrigerant oil after compressor replacement

The oil plug and "Removing oil label" are fitted on the spare parts compressor.

- OWhen the compressor is replaced to spare parts compressor, remove the excess refrigerant oil in the following procedure.
  - 1. First check again whether the discharge/suction side stop valves are opened and the cable connection at terminal is correct.

Preparation 2. Connect manifold to the discharge and suction ports.

3. Operate the unit for about 5 minutes. Stop

oil to the

Return the 4. Operate the S-PTI (Short PTI) and stop at step of "P10".

compressor

- (1) Set the ON/OFF switch to ON.
- (2) Push and hold the 

  key for 3 seconds to enter PTI selection mode.
- (3) Selecting the "S-PTI" mode using the  $|\triangle| |\nabla|$  key and pushing the  $|\bot|$  key activates the short PTI.
- (4) When "P10" is displayed on the LED, stop the unit.

<Function of step P06 & P08 before P10> Operate the steps of "P06" and "P08" which are displayed on the LCD.

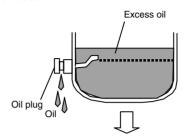

P06/HPS check:

When the high pressure rises, the circuration rate of refrigerant increaces and the oil is expected to return to the compresor.

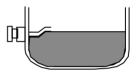

P08/Pump down check:

The refrigerant contained in the compressor oil is evaporated and separated from the oil.

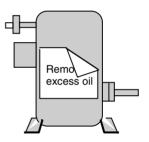

- 5. Bypass gas from high pressure side to low pressure side of gauge manifold, adjust the low pressure to 0kPa or more.
- 6. Loosen the oil drain plug and remove the excess oil.

7. Close the oil plug when no more oil comes out.

8. Take off "Removing oil label" sticked on compressor body.

REMOVING EXCESS COMPRESSOR OIL IS NOT COMPLETED.

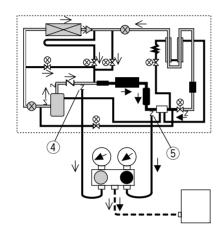

REMOVE EXCESS COMPRESSOR OIL. THEN TAKE OFF THIS LABEL

### (5) Procedure for oil replacement of Daikin scroll compressor (with oil gauge)

If the refrigerant oil is contaminated due to seizure of the compressor's motor etc., replace the oil by following the procedure shown below.

- 1. Collecting oil
  - Operate the compressor for about 10 minutes with pull-down.
  - 2) Stop the unit and collect all the refrigerant.

Collect completely the refrigerant gas remaining in the unit through ports (4) and (5).

- Drain the contaminated oil after checking that the pressure inside the compressor is 0kPa.
  - A: Remove the compressor, and tilt it to drain and collect the contaminated oil from the suction flange.
  - B: When using an oil collector
    Remove the oil gauge and insert the
    tube of the oil collector into the oil
    gauge openning to collect the
    contaminated oil inside the compressor.
    Note: Use an oil pan to prevent the oil
    from escaping when the oil gauge
    is removed.

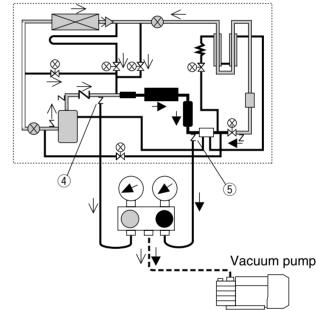

### 2. Filling new oil

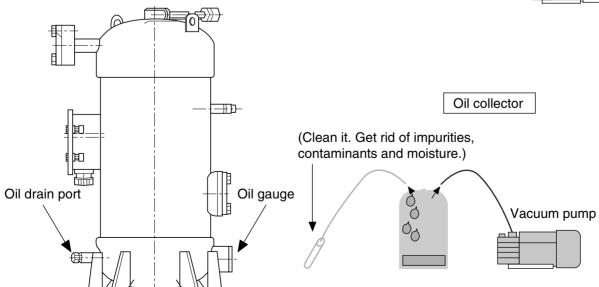

- A: ① Fill 2.0L of new oil through the suction flange with the compressor removed.
  - ② Attach the compressor to the unit. (Replace the discharge and suction flange gaskets with new ones.)

Tightening torques:

Compressor mount base: 42.7N.m Suction/discharge flange: 25.2N.m \$\phi\$ 9.5 flare nut : 36.3N.m \$\phi\$ 6.4 flare nut : 15.7N.m

- B: If an oil collector is used
  - ① Attach a new oil gauge (Tightening torque: 26.4 to 32.3N.m)
  - ② Use a vacuum pump to let 2L of the new oil to be sucked through the oil drain port of the compressor, and tighten the cap of the oil drain port with torque wrench. (15.7N.m)

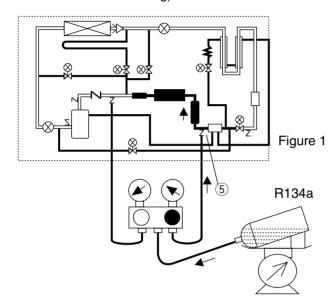

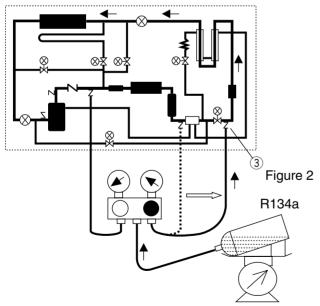

- 3. Vacuum in the refrigerant system
  - Connect the vacuum pump to the connection port as shown in the figure on previous page.
  - 2) Vacuum up to 75.5cmHg or more.
- 4. Filling a specified amount of refrigerant.
  - Connect the gauge manifold as shown in the diagram below and fill a specified amount of refrigerant.

(Refrigerant: R-134a LXE10E-A: 4.6kg.

LXE10E-1: 5.4kg)

- 5. Flushing operation and oil contamination
  - 1) Set the unit to SP-20, and carry out the pull-down operation for about 30 minutes.
  - 2) Check the oil contamination.
  - 3) Repeat steps 1 to 7 if the oil is still dirty.

- Adjustment of oil quantity
   Refer to "(4) Removal of excess refrigerant oil after compressor replacement on page 4-11.
- 7. Replacement of dryer filter
  - 1) Carry out the automatic pump down.
  - 2) Replace the dryer filter. (Tightening torque: LXE10E-A: 54.9N.m, LXE10E-1: 28.0N.m)
- 8. Checking refrigerant gas leaks
- 9. Securely apply touch-up and silicon sealant to each part.

### 4.2.2 Fan and fan motor

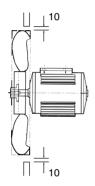

### (1) Specification

		Evaporator Condenser	
Fan	Model	Propeller fan	
Ę,	Size	440mm	300mm
	Model	3-phase squi	rrel-cage
		induction mo	tor
	Output (60Hz)	700/90W	670W
Motor	(Number of poles)	(2P/4P)	(4P)
₽		Shielded ball	Shielded ball bearing
	Bearing	bearing with	with rubber seal
		rubber seal	Counter-shaft side: 6204UUNC-X
		6203VVNX9	Shaft side: 6205UU

### (2) Installation structure

a. Condenser fan and fan motor

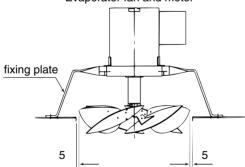

Condenser fan and fan motor

### b. Evaporator fan and fan motor

When installing the fan, keep contact with the root of the shaft of the fan installing section.

Evaporator fan and motor

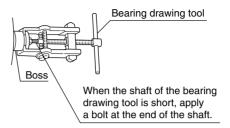

### (3) Replacement procedure

#### 1) Condenser fan

Remove the fan grille and the fan guide, and loosen the two hexagonal sets of screws on the boss of the fan, then pull the fan forward out

If the boss is stuck to the motor shaft, use the bearing drawing tool on the market to pull out the fan. • How to use bearing drawing tool on the market.

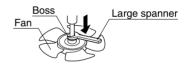

### 2) Condenser fan motor

- (1) Remove the condenser fan.
- ② Disconnect the fan motor cable from the magnetic switch in the control box.
- ③ Remove the fan motor mounting bolts, and replace the motor.
- (4) Install the fan and connect the cable.
- ⑤ After replacement, confirm that the fan is not in contact with the fan guide. (For checking, rotate the fan by hand.)

### 3) Evaporator fan

Loosen the two sets of screws on the boss portion of the fan, and pull the fan downward out.

If the boss is stuck to the motor shaft, use a large spanner as shown below.

- 4) Evaporator fan motor
- 1) After removing the fan at item 3), disconnect the fool proof wire connection.
- ② Remove the motor mounting bolts. (Do not remove the motor mounting base.)
- 3 After replacing the motor, connect the wiring with fool proof wire connection.
- (4) Install the fan.
- (5) After replacement, make sure that the fan is not in contact with the fan guide. (To check, rotate the fan by hand.)

### **CAUTION**

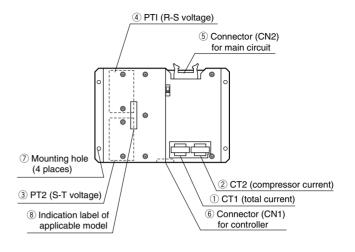

Apply the locking agent on the screws of the fan to prevent from loosening. Otherwise, fan may drop from the motor.

### 4.2.3 PT and CT board (EC9756)

Two function of the measuring device and protector are integrated on this printed-circuit board. This board works as an interface between the main circuit (high voltage) and the controller.

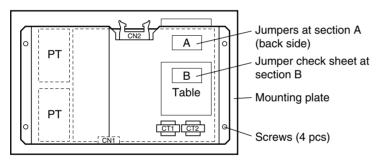

### (1) Function

Name	Content
Current measurement (CT1, CT2)	AC 0 to 50A (50/60Hz)
Voltage measurement (PT1, PT2)	AC 150 to 600V (50/60Hz)
Compressor	Unit with 400V only: 26.0A
overcurrent	Unit with 200V and 400V:
protection	15.0A
Phase sequence	The phase sequence is detected
detection	by sending the voltage
	waveform to the controller.

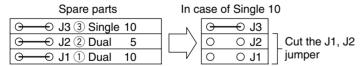

### (2) Pre-assembly work

Before installing the PT/CT board (spare parts), cut jumpers and remove the mounting plate for the over current setting.

### (2-1) Overcurrent setting

Cut jumpers at section A according to the following chart in order to make the over current setting. Example: over current setting for 10Hp single power

#### (2-2) Indication of check marks

After cutting jumpers, indicate check marks on the table B.

CASE	Type			
CASL	Туре	J1	J2	J3
1	Dual 10	0-0	0 0	0 0
2	Dual 5	0 0	0-0	0 0
3	Single 10	0 0	0 0	<del>○                                    </del>

Example of check mark indication		
CASE	Check	

CASE	Check
1	
2	
3	<b>✓</b>

### (2-3) Removal of mounting plate

Check the following table to see if the mounting plate should be removed. If the mounting plate must be removed, remove the four screws and dismount the mounting plate.

### Over current setting and removal of mounting plate

Model		Spare parts	LXE5C	LXE10C	LXE10D	LXE10D LXE10E
Туре			Dual 5HP	Dual	10HP	Single 10HP
Over current setting value			8.5A	15	5A	26A
SIS	J3	⊕—⊕	0 0	0	0	<del>0 0</del>
Jumpers	J2	⊕—⊕	<del></del>	0	0	0 0
J1		⊕—⊕	0 0	<u> </u>	<b>→</b>	0 0
Mounting plate		Provided	Not to be removed	Not to be removed	To be removed	To be removed

○ ○ : Cut jumper

→ : Do not cut jumper

### (3) Replacement procedure

### **CAUTION**

Be sure that the main power is disconnected.

- ① Disconnect the wires routed via CT1 and CT2 from the terminals.
  - At this time, take care to prevent CT1 and CT2 from being damaged.
- ② Disconnect the connector (CN1) for the controller and the connector (CN2) for the main circuit.
- ③ Remove four mounting nuts.
- 4 After replacing the PT and CT board, connect the lead wired in reverse order of the above removal procedure.
- ⑤ After checking the wiring once, test-run the system to verify that no trouble is found.

### 4.2.4 Electronic expansion valve

Model Coil : HCM-MD12DM-1 Body : HCM-BD35DM-1

This unit adopts an electronic expansion valve. The electronic expansion valve controls the optimum refrigerant flow rate automatically, using the temperature sensor at the evaporator inlet and outlet pipes.

In case of emergency including controller malfunction, refer to the chapter of troubleshooting, section 6.5, Emergency operation.

### (1) Replacing the coil

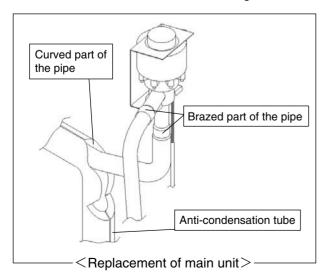

- Remove the binding band fixing the coil lead wire.
- (2) Disconnect the connector of the coil.
- (3) Remove the metal fitting and the coil.
- 4 Replace the old coil with a new one.
- (5) Attach the coil and the metal fitting.
- (6) Mount the connector of the coil.
- 7 Fix the coil lead wire with a binding band.

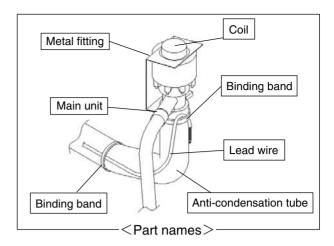

### (2) Replacing the body

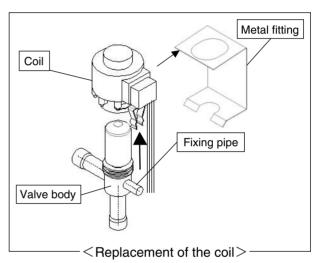

- Remove the binding band fixing the coil lead wire.
- ② Detach the anti-condensation tube until the curved part of the pipe.
- 3 Remove the metal fitting and the coil.
- 4 Remove the brazed part of the pipe.
- 5 Insert the new valve body in the pipe.
  - →Braze the new valve body while cooling it with a wet cloth.

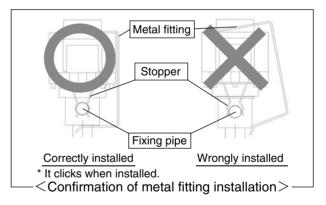

Maximum body temperature: 120°C (248°F) or less

- (6) Mount the coil and the metal fitting.
- (7) Mount the anti-condensation tube.
- 8 Fix the coil lead wire with a binding band.

### Attention (When installing the coil and the metal fitting)

- Securely attach the coil stopper to the valve body fixing pipe.
- →If wrongly attached, the expansion valve may function abnormally, damaging the compressor.
- ■Take care not to allow the metal fitting damage or pinch the lead wire.
- →Malfunction of the expansion valve may arise.

### 4.2.5 Suction modulation valve

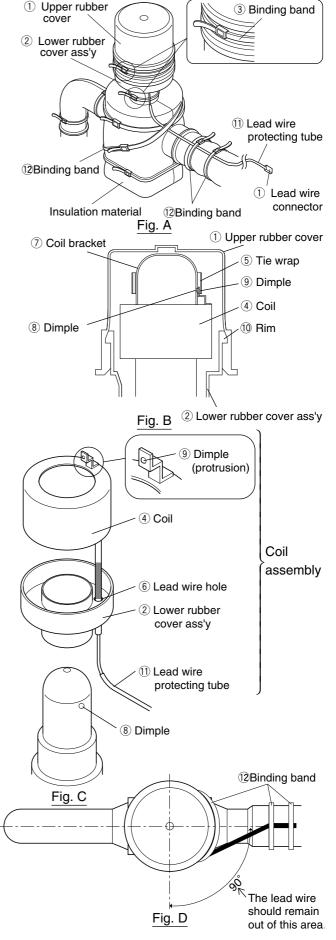

The flow rate of suction gas is controlled between 10 to 328pls (3 to 100%) by a stepping motor in order to conduct capacity control operation.

### 1. Replacing the coil

- Coil removing procedure
- (1) Disconnect the SMV lead wire connector

  (1) from the inside of control box.
- (2) Cut the binding band ③ at the upper rubber cover ① and lower rubber cover ②, then remove the rubber cover ①.
- (3) Cut the tie wrap ⑤ located above the coil ④, then remove it.
- (4) Remove the coil (4) and the lower cover assembly (2).
  - Reinstalling of coil
- (1) Mount the lower rubber cover assembly ② and the coil ④.
  - Note) Engage the dimple (a) of coil bracket (b) with the dimple (protrusion) (b) of coil (d), and adjust the angle as shown in the Fig. D.
    - Since the angle adjustment is important for control of suction modulating value, carry out the adjusting accurately.
- (2) Fix the coil (4) and coil bracket (7) with the tie wrap (5) so that the coil (4) and the position of the dimple of coil bracket (7) should not be displaced.
  - Note) Ensure that the tie wrap is not tilted.
- (3) Arrange the lead wires as shown in the Fig. A and Fig. D and fix them with the binding band so that the slack of lead wires should be prevented.
- (4) Replace the upper rubber cover ①.

  Note) Set the engaging section of upper cover to fit with the rim of lower rubber cover ⑩.
- (5) Place the binding band ③ to fit the upper and lower covers
  - Note) Fix the lead wire carefully so that water does not enter into its protecting tube ①. (Fix lead wire with binding band.)
- (6) Connect the connector of lead wire ① to the inside of control box.

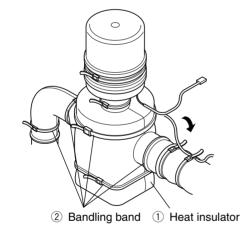

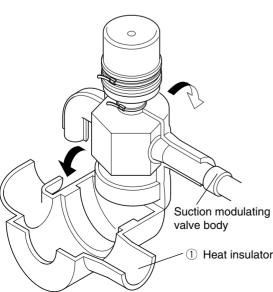

### 2. Replacement of body

- Remove the coil. Refer to the section 1.
   "Replacing the coil" for removing procedure.
- (2) Remove the heat insulator ① for the SMV after cut the binding band ②.
- (3) Heat up the brazed joint on the piping of SMV body to disconnect the pipe at brazed section.
- (4) Assemble piping of the SMV body, and conduct brazing while keeping the temperature of lower body of SMV below 120°C (248°F) by covering the body with wet cloth.
  - Note) When brazing, to keep the temperature of body, including value body, coil, lead wire, etc. below 120°C by supplying water.

In this work, be sure to prevent water from entering into the lead wire protection tube.

- (5) Install the heat insulator ① and fasten it with bandling band ②.
- (6) Install the coil. Refer to the section 1.
  "Replacing the coil" for removing procedure on the previous page.

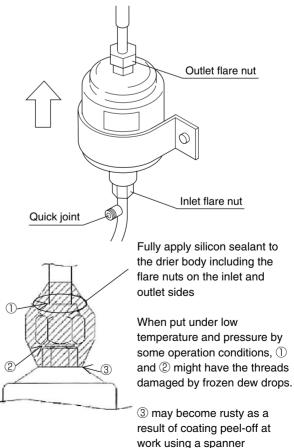

### **4.2.6 Drier**

The drier automatically absorbs moisture in the refrigerant while it is circulated. It also commonly works as a filter to remove dust in the refrigerant. Replace the drier if it does not absorb moisture, is blocked, or if the system has been opened to the atmosphere. When installing the new drier, follow the arrow and do not make any mistake about the installation direction of the drier

### (1) Replacement procedure

- ① Conduct **the automatic pump down** to collect the refrigerant in the liquid receiver. Refer to page 4-3 and 4-4 for the automatic pump down.
- ② Then, quickly replace the drier with a new one after loosening the flare nuts on the inlet and outlet side of the drier.
- 3 After completing of the replacement of the drier, be sure to conduct refrigerant leakage test to confirm that no refrigerant leakage is occuring.
- 4 Check on the green colour of the liquid / moisture indictor after system operation has started.
- (5) Apply silicon sealant to the drier body including the flare nuts on the inlet and outlet sides

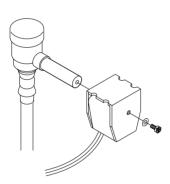

### 4.2.7 Solenoid valve

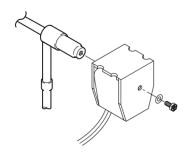

Two kinds of solenoid valves are employed for the unit.

Coil is common and replacement procedure is also almost the same for all types of valves.

Valve name	Symbol	Valve type	Type of coil
Economizer Solenoid valve.	ESV	NEV-202DXF	
Injection Solenoid valve.	ISV	NEV-202DAF	
Liquid Solenoid valve.	LSV		
Discharge gas by-pass Solenoid valve.	BSV		NEV- MOAB507C
Defrosting Solenoid valve.	DSV	VPV-803DQ	
Hot gas Solenoid valve.	HSV		
Reheat Solenoid valve. (optional)	RSV		

VPV-803DQ Fig. 1

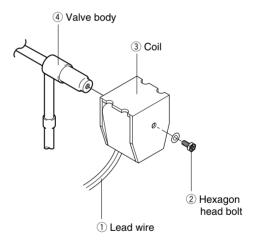

NEV-202DXF Fig. 2

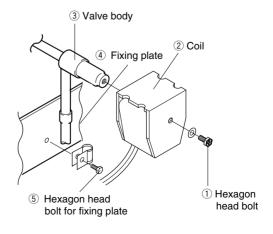

### (1) Replacing the coil

- Remove the lead wire connector from the inside of the control box, and cut and recover the binding band which fastens the lead wire.
- ② Remove the hexagonal head bolt on the top of the coil to pull the coil out.
- ③ Replace the coil with a new one and restore the hexagonal head bolt, the binding band and connector on the original position. When reassembling the coil, the tightening torque should be 1.2 N·m (12.2 kg·cm).

### (2) Replacement of valve body

- ① Remove the hexagonal head bolt on the top of the coil to pull the coil out.
- ② Remove the hexagonal head bolt of the fixing plate, and cut the two pipes at the side of the valve body. Disconnect the remaining pipes at the brazed joint sections.
- ③ Insert the new valve body into the pipe and conduct brazing while keeping the temperature of the valve body below 120 °C (248 °F) by cooling.
- 4 Install the coil and restore the hexagonal head bolt of the fixing plate and the connector into their original position.

### 4.2.8 Discharge pressure regulating valve

#### Model KVR15

### (1) Replacing the valve

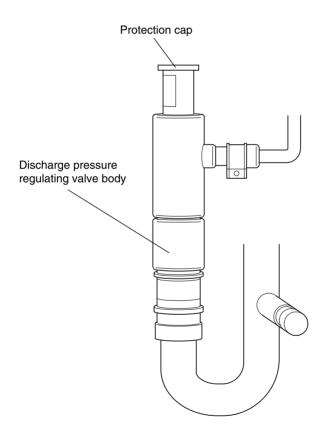

- 1 Remove the protection cap to conduct brazing for the valve body.
  - Be sure not to turn the regulating screw inside the valve, since the pressure has been adjusted to 690 kPa (7.0 kg/cm²).
- ② When brazing, it is required to cool the valve body in order to keep the temperature of valve body below 140 °C by covering the body with wet cloth or the like.
- 3 After brazing work, set and tighten the protection cap.
  - The tightening torque should be 8 to 10 N $\cdot$ m. Apply lock-tight, etc. on the screw section to avoid loosening of the cap.
- 4 After replacement, carry out refrigerant leakage check, and make sure there are no leaks.

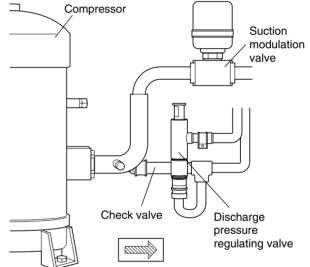

### 4.2.9 Check valve

● Model LCV(B)5

### (1) Replacement procedure

- Remove the pipe clamp which fixes the check valve, then heat up the valve to disconnect the brazed joint.
- ② Install the new check valve taking care to install it in the correct direction, which is the same direction as the arrow shown in the label.
- ③ Conduct brazing while cool the center part of valve with a wet cloth to keep the temperature of the valve body below 120 °C (248° F)
- 4 After replacing the valve, carry out refrigerant leakage check, and make sure that there are no leaks.

### 4.2.10 High-pressure switch (HPS)

Model ACB-KB15

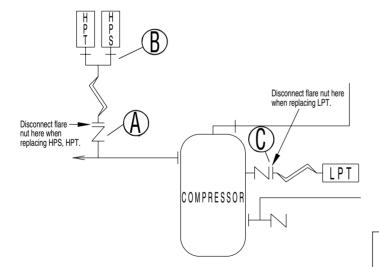

● Set point OFF : 2400kPa (24.47kg/cm²)

ON: 1900kPa (19.37kg/cm²)

When the refrigeration pressure of the unit rises abnormally, the compressor stops for safety. The HPS will be activated when the pressure exceeds the set point, as a result of trouble with the condenser fan.

### (1) Replacement procedure

- ① Disconnect the lead wire from the control box.
- In order to prevent refrigerant from flowing out, disconnect the high-pressure gauge piping from the gauge joint (with check valve)
   On the compressor side.
- 4 Replace the HPS. After tightening the flare nut  $\mathbb{B}$ , tighten the flare nut  $\mathbb{A}$ .
- (5) After tightening (A), slightly loosen the flare nut (B), remove air, and retighten (B).
- 6 After replacing, carry out the refrigerant leakage check, and make sure that there are no leaks.

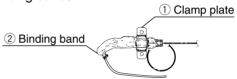

### 4.2.11 Low pressure transducer (LPT)

Model		NSK
Transducer type		NSK-BC010F
cation	Transducer	Black body
Identification color	Connector	Nothing

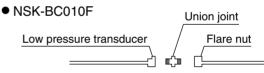

The LPT is located in the refrigerant circuit. The operating low pressure value is displayed on the controller indication panel.

### (1) Replacing the transducer

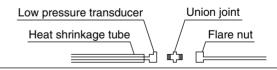

- ① Disconnect the lead wire from the control box.
- ② In order to prevent refrigerant from flowing out, disconnect the low-pressure transducer piping from the gauge joint (with check valve) © on the compressor side.
- ③ Remove two screws on the clamp plate fixing low pressure transducer in place, and cut the binding bands.

④ Remove the heat shrinkage tube, and disconnect the connector from the low pressure transducer.

⑤ Insert the pressure transducer cable through the heat shrinkage tube, and connect the union joint and connector to the new low pressure transducer. If paint on the low pressure transducer is peeled off, apply clear lacquer.

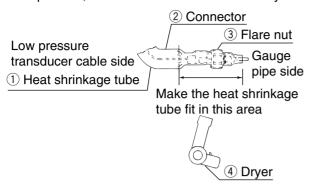

### **CAUTION**

Do not expose the low pressure transducer to hot air of a dryer for excess time.

Otherwise, the transducer may be damaged.

⑥ Apply the heat shrinkage tube in the following position, then shrink it with hot air of a dryer.

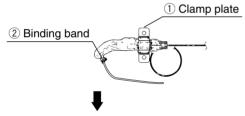

② Apply sealer between the heat shrinkage tube and the flare nut. (Sealer :KE4898)

® Fix the low pressure transducer with the clamp plate, and fix the cable with the binding band.

Fix the shrinkage tube end of the cable side downward for prevention of water entering into the tube.

Fix the tube directing the end downward

### 4.2.12 High pressure transducer (HPT)

Model		NSK
Transducer type		NSK-BC030F
Identification color	Transducer	Red & Brown body
	Connector	Nothing

The HPT is located in the refrigerant circuit. The operating high pressure value is displayed on the controller indication panel.

### (1) Replacement procedure

The replacement procedure is the same as that for the low pressure transducer.

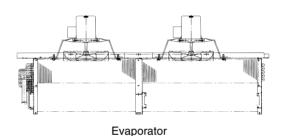

Make sure that the fixing position and the cable connection is correct.

### 4.2.13 Air-cooled condenser and evaporator

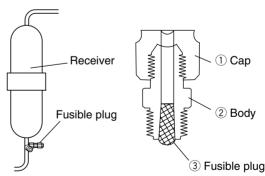

This finned coil is compact and has uniform heat exchanging performance and high heat exchanging efficiency due to the adoption of corrugated fins.

- Washing of air-cooled condenser
   Carefully flush the air-cooled condenser with
   fresh water after trip, although this type of
   condenser employs thick fins and
   electrodeposition coating for high corrosion
   resistance.
- For the maintenance of the air-cooled condenser, remove the fan grille, fan guide and temperature recorder box. For the maintenance of the evaporator, remove the rear panel of the evaporator.

### 4.2.14 Fusible plug

● Replacement of fusible plug

If pressure rises abnormally in the refrigeration circuit, the fusible plug is automatically activated, so, thoroughly check the possible causes if the fusible plug melts.

If the fusible plug is activated, the fusible alloy

① melts and refrigerant blow out (Melting point: 95°C ~100°C).

For replacement, 1-3 shall be replaced.

### 4.2.15 Liquid / Moisture indicator

Liquid/Moisture Indicator permits checking of the refrigerant flow rate and moisture content in the refrigerant.

### (1) Moisture indicator

### (2) Judgement for refrigerant flow rate (normal, shortage or overcharge) (for unit with 5.2 kg refrigerant)

(	Operation		Judgement	
	RS <approx. 0°c<="" td=""><td>Normal</td><td>Refrigerant charge is normal if the indicator is full of liquid when RS is under approx. 0°C</td><td></td></approx.>	Normal	Refrigerant charge is normal if the indicator is full of liquid when RS is under approx. 0°C	
Frozen operation	RS <approx 0°c<="" td=""><td>Shortage</td><td>Refrigerant charge is short if the indicator shows flashing of refrigerant when RS is under approx 0°C</td><td>ATTENTION 2</td></approx>	Shortage	Refrigerant charge is short if the indicator shows flashing of refrigerant when RS is under approx 0°C	ATTENTION 2
	RS>approx 0°C	Normal in most cases	Refrigerant charge is normal with flashing in the indicator in most cases, when RS is above approx 0°C	As flashing here does not mean gas shortage, do not charge with
Chilled operation	Flashing	Normal in most cases	Refrigerant charge is normal with flashing in the indicator in most cases, during chilled operation with capacity control.	additional refrigerant.  Possibly caused by overcharging

If the amount of refrigerant is excessive or insufficient, completely recover all refrigerant and charge with a correct amount of refrigerant.

Additionally charging refrigerant exceeding the specified amount may cause a failure of the compressor.

(Specified amount of refrigerant: R134a 5.2Kg/LXE10E100 or later)

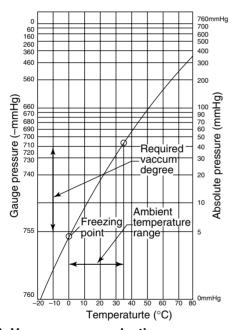

### 4.2.16 Evacuation and dehydrating

After repairing the refrigerant system, vacuumdehydrate the system before charging the refrigerant.

Vacuum-dehydrating is the process to make the circuit dry by purging the moisture (liquid) in the circuit to outside in state of vapor (gas) using the vacuum pump.

As the pressure lowers below normal atmosphere (760mmHg), the boiling point of water rapidly drops. If the boiling point drops beyond the atmospheric temperature, water will be vaporized. Example: If the atmospheric temperature is 7.2 °C

(45 °F), vacuum-dehydrating will be impossible unless the vacuum degree is lower than –752mmHg. For vacuum-dehydrating, it is important to select and maintain the vacuum pump.

### (1) Vacuum pump selection

Select a vacuum pump considering the following two points.

- ①Select a vacuum pump whose vacuum achievability is excellent.
  - (A vacuum degree of –755mmHg or lower can be achieved.)
- ②The displacement must be relatively large (approx. 40 \( \ell \) /min. or more).

  Before vacuum-dehydrating work, be sure to confirm that the pump achieves the vacuum degree of -755mmHg or lower by

using the vacuum gauge.

Boiling point of water (°C)	Atmospheric pressure(mmHg)	Vacuum degree(mmHg)
40	55	-705
30	36	-724
26.7	25	-735
24.4	23	-737
22.2	20	-740
20.6	18	-742
17.8	15	-745
15.0	13	-747
11.7	10	-750
7.2	8	-752
0	5	<del>-</del> 755

(Reference) Kinds of vacuum pumps and achievable vacuum degree

Type	Achievable vacuum degree	Application	
Туре	Displacement	For vacuum-dehydrating	For air exhausting
Oil rotary type	-759.98mmHg	Applicable Applicable	
(oil-necessary type)	100 ℓ /min.	Applicable	Applicable
	-750mmHg	Inapplicable	Inannliaahla
Oilless rotary type	50 ℓ /min.	Inapplicable Inapplicable	
(oil-unnecessary type)	-759.98mmHg	Appliachle	Applicable
	40 ℓ /min.	Applicable	Applicable

Take care that this type is often used as the most convenient type.

With the pump of an oil rotary type, it is important to replace the oil and check the achievability every 1 to 2 months.

### (2) Vacuum-dehydrating method

There are two method of vacuum-dehydrating of normal vacuum-dehydrating and special vacuum-dehydrating. In general, the normal vacuum-dehydrating is applied. If any moisture has entered the circuit, apply the special vacuum-dehydrating method. [normal vacuum-dehydrating]

1) Vacuum-dehydrating(first time)

Connect the gauge manifold to the service ports of the liquid line and the outlet of discharge pressure regulator. Run the vacuum pump for 2 hours or longer. (The achievable vacuum degree must be <u>-755</u> mmHg or lower)

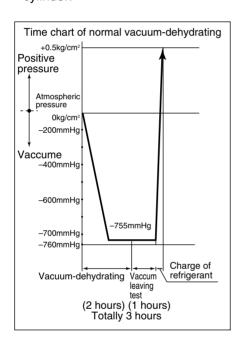

If a pressure of –755mmHg or lower can not be achieved even after pump operation of 2 hours, moisture or leakage may exist in the system. In this case, run the pump another hour or more. If a pressure of –755mmHg or lower can not be achieved even after operation of 3 hours or more, check for leakage.

Note: Evacuate the system from the service ports ④ of both liquid and outlet of the check valve ⑤, because the system is blocked on the way since the liquid solenoid valve is provided on the way of the system.

- ② Vacuum holding test

  Hold the system at a pressure of

  -755mmHg or lower for 1 hour or longer,
  and confirm that the vacuum reading does
  not rise on the vacuum gauge. If it rises,
  moisture or leakage may exist in the
  system. However, take care not to leak air
  from the gauge manifold. If air enters, it is
  recommended to use the cupper tube
  directly instead of gauge manifold.
- ③ Charging of refrigerant After the vacuum-holding test, make the circuit vacuous again for approx. 10 minutes. Then, charge the specified amount of refrigerant through the service port on the liquid line using the charging cylinder.

### [Special vacuum-dehydrating]

This method is that the vacuum-breaking process with nitrogen gas is integrated one time or more in the same way as the normal vacuum-dehydrating process.

- ①Vacuum-dehydrating (first time) ..... 2 hours
- ②Vacuum-breaking (first time)

  Nitrogen gas is pressurized to 0.5kg/cm² from the service port on suction pipe.

  Since nitrogen gas breaks the vacuum, the effect of the vacuum-dehydrating is enhanced. However, if there is much moisture, it can not be removed by this method. Therefore, do not allow water entry or produce water during the refrigerant piping work.
- ③Vacuum-dehydrating (second time)
  Run the vacuum pump one hour or longer.
  (The achievable vacuum must be
  —755mmHg or lower.)
  If pressure of —755mmHg or lower can not be achieved even after vacuuming of 2 hours, repeat step ②vacuum-breaking and ③vacuum-dehydrating.
- 4 Vacuum holding test ..... 1 hour

Same as normal vacuum-dehydrating

⑤Additional charge of refrigerant

Note: Make sure to use nitrogen gas for vacuum-breaking. (If any oxygen gas is used, it may explode.)

(1mmHg=0.0013kg/cm<sup>2</sup>=0.133Kpa)

### 4.3 Periodic Inspection Items

Always to operate the unit normally, conduct periodic inspections of each part in addition to preoperation ones and make adjustments or repairs where necessary.

The following table shows an example of the inspection plan.

Inspection for physical damage   2   Loose mounting botts   3   Condition of panels, hinge and lock   4   Control box inspection   2) Loose cable gland	8 <sup>th</sup> year

### 5. OPTIONAL DEVICES

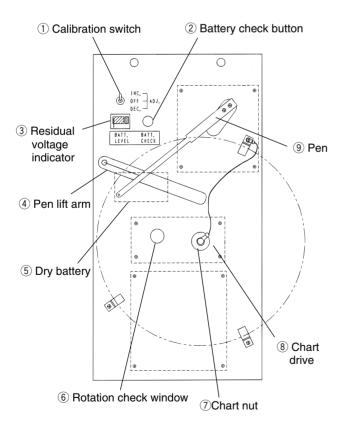

The following optional devices are available for some models. For other optional devices, refer to the "Optional function" manual and parts list.

# **5.1 Electronic temperature recorder 5.1.1 Standard type**

This recorder automatically records the control temperature (either return air temperature or supply air temperature) with the chilled/partial frozen and frozen switching signals from the controller. The faulty sensor detection function and calibration function are integrated for maintenance and inspection.

Do not move the pen forcibly by band.

#### (1) Specifications

Model DER9601A

Power supply AC13V 50/60Hz

Recording temperature range −30.0 to +25.0 °C
 (−22 to +77°F)

Chart paper Round type 8-inch pressure-

sensitive paper

[PARTLOW PSD-217C (REV.A) or equivalent]

(31days/rev.)

### Battery

Use	Type	Specification	Standard
Chart drive	R14P (SUM-2)	DC1.5 V U2 (C size) type	JISC8501 IEC60086
Recording pen goes to upper end of the chart	6LR61	DC9V	JISC8511 IEC60086

#### Battery life

Approx. 1 year (Check with the residual voltage indicator)

Residual voltage indicator (optional)

Green zone : Operable

Silver zone : Usable for 7 days Red zone : Replace battery

Recording pen driving system
 Pulse motor drive

Sensor (Thermistor)

Model	Use
ST9503-4	RSS: For supply air temperature recording
ST9503-2	RRS: For return air temperature recording

Note: Recording accuracy

The accuracy of the recorder and the sensor are shown in the following table.

The adjustment with calibration is applicable only on the recorder.

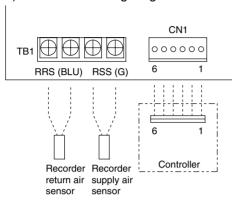

Recording	Accuracy °C		
temperature range	Recorder	Sensor	Total
25°C to 10°C	±1.0	±1.0	±2.0
10°C to -15°C	±0.5	±0.3	±0.8
–15°C to –29.9°C	±1.0	±1.0	±2.0

### (2) Devices and schematic wiring diagram

#### 1) Devices

Device	Location
Temperature recorder board	In the temperature recorder box
Recorder return air sensor (RRS)	Evaporator suction area
Recorder supply air sensor (RSS)	Evaporator discharge area

### 2) Schematic wiring diagram

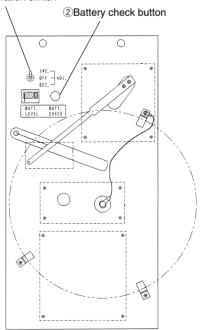

### (3) Checking (Calibration) of the indicated value on the recorder (optional)

This recorder can be checked for its switching function for recording sensors and temperature indication function regardless of inside temperature, and can be adjusted.

Switching function for recording sensors
 By operating the set temperature on the
 controller, the temperature recorder
 automatically switches the recording sensors,
 return air sensor (for frozen and partial frozen
 modes) and supply air sensor (for chilled mode)

### 1)Calibration switch

### 2) Calibration function

Calibration switch

INC.

OFF.

ADJ.

DEC.

INC: To increase temperature figure DEC: To decrease

temperature figure

Notes: 1. The pen is adjusted to suit to the PSD-217C (REV.A) recording chart paper or its equivalent.

Do not use the recording charts other than ones mentioned above.

- 2. Do not change the position of pen during transportation.
- When the power is supplied, the pen vibrates momentarily and will return to its original position due to the recording characteristics, but this is not a sign of trouble.

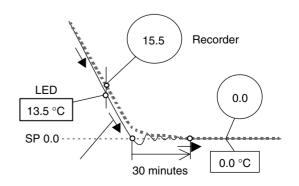

### **CAUTION**

When the indoor temperature is stable, recording temperature is adjustable by changing the pen position using the calibration switch. Do not move the temperature recording pen manually.

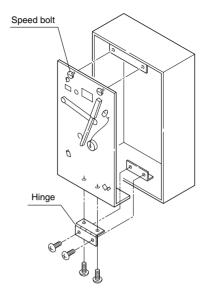

#### (4) Characteristics of the recorder

During the pull-down operation and for 30 minutes after the setting temperature is reached, the recorder calculates the accumulated average temperature every 7.5 minutes. As the temperature is displayed at the pen tip with a certain delay, the actual temperature will be higher than the temperature displayed in the LED. Therefore, the adjustment of the temperature displayed at the pen tip should be done after a lapse of 30 minutes since the setting temperature is reached.

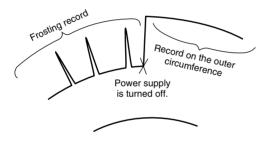

### (5) Replacement of temperature recorder

- 1)Turn off the circuit breaker.
- ②Remove the wiring connector and sensors from the back of the temperature recorder.
- ③Remove the hinge on the bottom and the speed bolts on the top.
- 4) Replace the temperature recorder board.
- (5) After replacement, be sure to check the wiring and operation.

### 5.1.2 Rechargeable battery type

■Temperature record with power supply turned off When the power supply is turned off, the pen will move to the outer circumference of recording sheet simultaneously.

### Rechargeable battery

The rechargeable battery is equipped on the electronic temperature recorder.

(Application of rechargeable battery)

- ①Drive of chart
- ②Pen swings up when the main power is turned off (+25°C is recorded.)

(Specifications of rechargeable battery)

- · Charge type nickel cadmium battery (7.2V, 600mA)
- · Model:6N-600AA-2

### (Replacement reference)

- · As reference, 2 to 4 years have elapsed.
- · Replace the battery if the pen does not swing up to +25°C when the breaker is turned off.
- · Confirm the life of rechargeable battery and make sure the internal gear rotating properly through the rotation check window when the battery was replaced.

### **5.2 Cold Treatment Transport**

Models equipped with USDA sensor and receptacle (optional for both) can perform cold treatment transport.

### 5.2.1 Setting the number of USDA sensor connections

It is necessary to set the number of USDA sensor connections prior to cold treatment transport. The setting procedures are described below

### Setting the number of USDA sensor connections

The number of USDA sensor connections can be 3 or 4. Set "3" or "4" in accordance with the number of the connections based on the cold treatment transport standards (USDA). If there is no USDA transportation, set "OFF"

Setting the number of USDA sensor connections

USDA setting	Number of
"OFF", "3", "4"	connections
٥٦٦	When there is no
OFF	USDA transportation
3	3
4	4

Note 1: For the setting procedures of the number of USDA sensor connections, refer to 3.3.2 (10. Optional function setting mode)

### 5.2.2 USDA sensor calibration

USDA sensors must be calibrated for each transportation. Connect the PC with installed DCCS software and operate according to procedures. Select "USDA SENSOR CALIBRATION" when the number of USDA sensor connections is 3 and select "4 PULP SENSOR CALIBRATION" if the number of them is 4. For details, refer to DCCS operation manual

### Checking USDA sensor type setting

If a hugely different calibration value is obtained at calibration, it is possible that USDA sensor model setting is incorrect. USDA sensor type includes "ST9702-1" type and "NTC" type. Refer to 5.2.5 in USDA sensor. Make sure that USDA1/2 is set to "1" for "ST9702-1" type and "2" for the "NTC" type.

USDA sensor model setting

USDA1/2 setting	Sensor type
to "1" or "2"	Probe type
1	ST9702-1
2	NTC

If the setting is wrong, correct it.

Note 1: To set USDA1/2 to "1" or "2", refer to 3.3.2 (10. Optional function setting mode)

Note 2: Setting error does not allow the controller to recognize the sensor property and correct data cannot be recorded. Be sure to connect correctly

### 5.2.3 USDA report

Temperature record data during cold treatment transport can be prepared in the format in conformity with USDA standards which is downloadable from the PC that installed DCCS software. Select "USDA TREATMENT REPORT" when the number of USDA sensor connections is 3 and select "4 PULP SENSORS TREATMENT REPORT" when the number of them is 4. For details, refer to DCCS operation manual

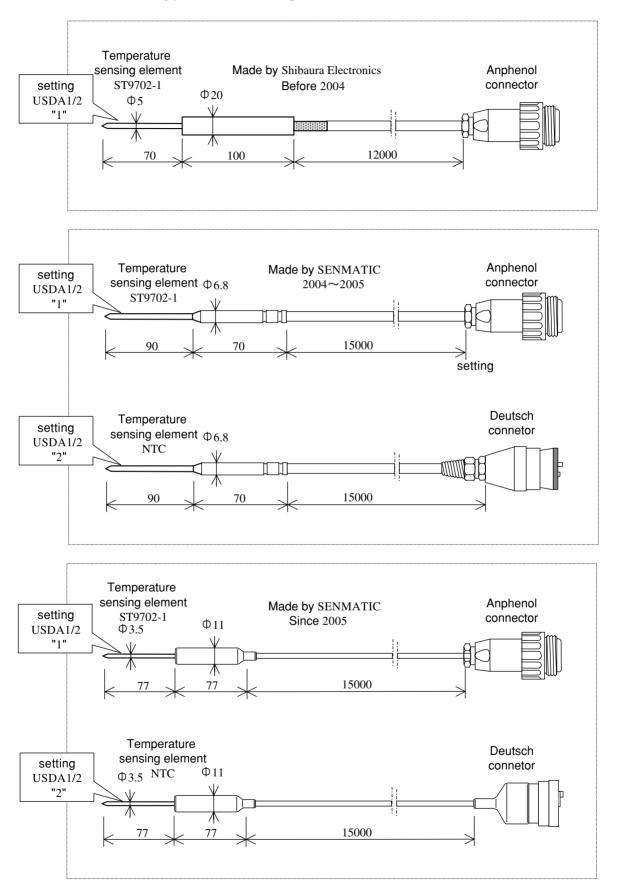

### 5.2.4 Battery check and replacement

Temperature data must be recorded for 72 hours after the power is turned off. Be sure to check the backup batteries for the controller prior to voyages.

Rechargeable batteries: Check the remaining battery voltage mentioned in 3.4 section.

Dry batteries : Be sure to prepare new ones

### 5.2.5 USDA sensor types and setting

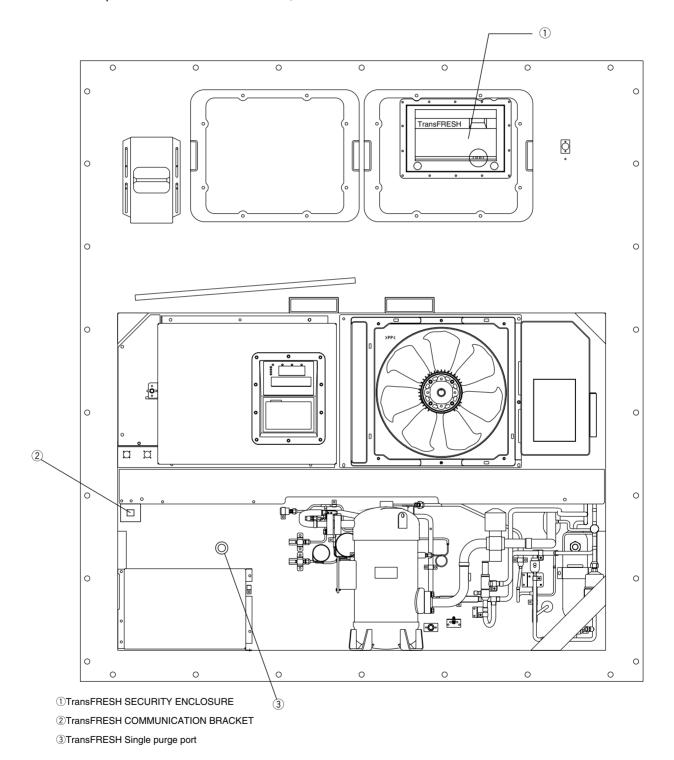

### 5.3 TransFRESH

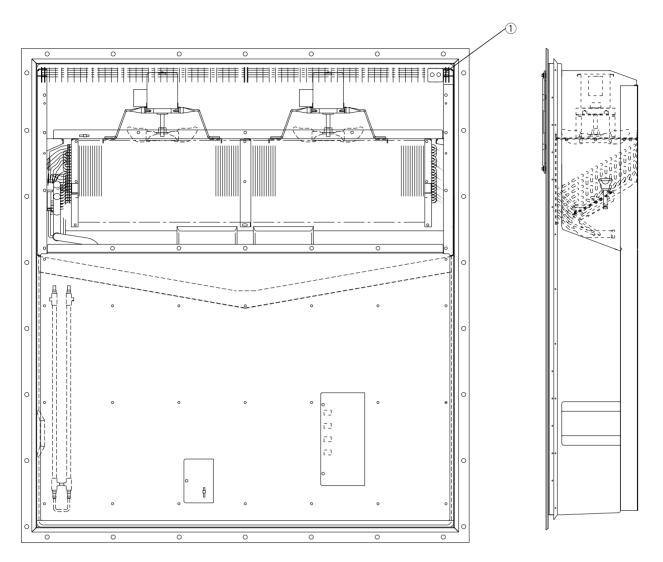

Attachment for the TransFRESH CA devices are provided to control the internal atmosphere (quantity of O<sub>2</sub> and CO<sub>2</sub>).

Use the CA devices according to the Operation Manual supplied by TransFRESH. The controller and sensor included in the CA devices are installed by the TransFRESH's agents before each transportation.

•An example of installation of CA devices, outside.

•An example of installation of CA devices, inside

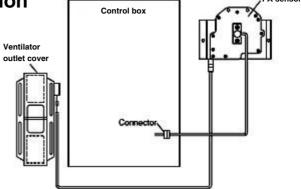

① TransFRESH ASS'Y A4&A5 CABLES W/MOUNTING BOX

### 5.4 Ventilator outlet opening detection (FA sensor)

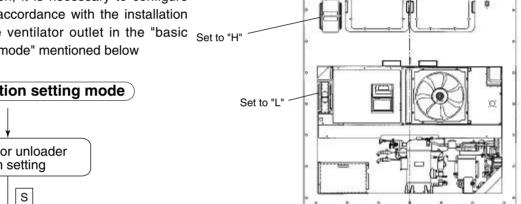

●Type: 5ZZ2157

Consisting of the body (wire reel and position meter) and the wire. The top of the wire is connected to the ventilator outlet cover so that the ventilator outlet opening can be detected.

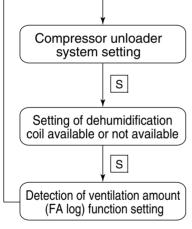

### Setting method

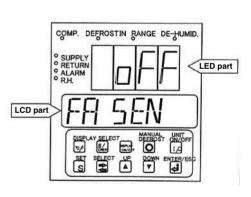

To validate the ventilator outlet opening detection function, it is necessary to configure the settings in accordance with the installation positions of the ventilator outlet in the "basic  $_{\rm Set\,to\;"H"}$ function setting mode" mentioned below

### 11. Basic function setting mode

LED screen	LCD screen	Setting method
OFF: Detection function not available H: Detection function available at the upper ventilator opening L: Detection function available at the lower ventilator opening	FA SEN	Make selection using the △ key and ▽ key. Press the ↓ key to confirm the selection

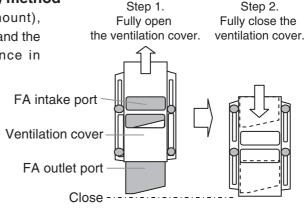

# \* Applicable models: LXE10E G Type (DECOS III G) and earlier \* The calibration method for the FA sensor varies depending on the model.

### FA sensor calibration (zero point adjustment) method

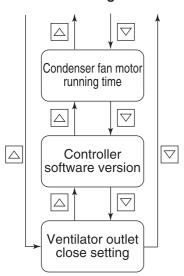

When setting the ventilation amount (FA amount), calibrate the position of the ventilator outlet cover and the FA sensor (zero point adjustment) in advance in accordance with the steps below.

1. Positioning the ventilator outlet cover

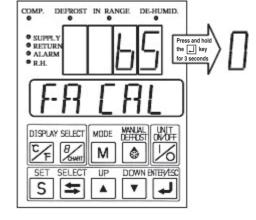

Position the ventilator outlet cover in accordance with the two steps (fully open ⇒ fully close) given at right.

### 2. Calibrating the FA sensor

Select the ventilator outlet CLOSE setting mode using the and keys in the manual check selection mode (FA CAL) is displayed on LCD screen) and press the key to display the current sensor slide level. When the slide level is displayed, press and hold the key for 3 seconds to reset it to zero

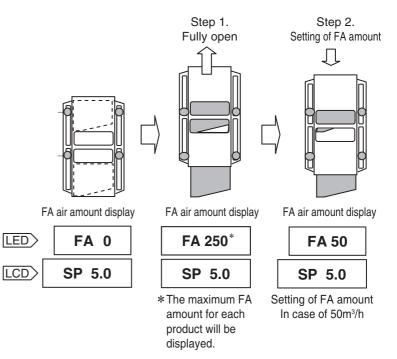

# Ventilation amount (FA amount) setting method

Step 1: Fully open the ventilator outlet cover.

Step 2: Move the cover downward until the FA amount which is displayed on the LED reaches the setting value. Tighten the four wing bolts to secure the cover.

If the cover is moved upward in step 2, repeat the procedure starting from step 1.

Display the FA amount on the LCD in accordance with the method given in 6. SENSOR INDICATION MODE (P.3-12) or 3. BATTERY MODE (P.3-9).

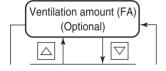

### **Function description**

### 1. Ventilation amount indication and ventilator outlet positioning

The current ventilation amount can be checked in the "ventilation amount" (FA) screen in

**6. Sensor indication mode** or **(3. Battery mode)** .

### 6. Sensor indication mode

LED screen	LCD screen	Setting method
(Off)	FA	When FA SEN is set to "L" or "H"

### 2. Ventilation amount log function

Ventilation amount data can be provided to the controller as event log

### 3. Data logging details

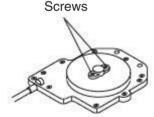

- · Ventilation amount (FA) converted from the ventilator outlet opening degree (indicated in m³/h)
- · Time, data, month, year for data logging

### 4. Log timing

- · When the unit starts to run
- · Once a day (12:00 am)
- · When the ventilation outlet opening changes

### Replacement method

- ① Remove the lead wire (connector connection) in the control box
- 2 Remove the screws that fixate the ventilator outlet cover to the top of the wire
- ③ Remove the screws fixating the body to the casing and replace the whole sensor including the wire\* Be sure to replace the whole sensor including the wire
- 4 After replacing, seal with silicon sealant around the screwss fixating the position meter in the sensor body

### 5.5 Daikin Temperature Management System (optional) DTMS function

This is the temperature control function to cut down power consumption. To conserve energy, this system controls the compressor's ON-OFF switching, High-Low switching for the evaporator fan speed while maintaining the existing temperature control

#### Control details

		DTMS
	Operating range	-9.9°C≦SP≦-2.6°C, -1.0°C≦SP≦+30.0°C*2
	Temperature control range	Same as normal chilled operations *2 (SP-0.5°C≦SS≦SP+0.5°C)
Chilled mode	Compressor	ON-OFF operation*3
	Condenser fan motor	OFF when the compressor is OFF
	Evaporator fan motor	High-Low switching operation *3
	Operating range	Whole frozen range (-10.0°C≦SP≦-30.0°C)
	Temperature control range	Same as normal frozen operations (SP≦RS≦SP+1.0°C)
Frozen mode*1	Compressor	ON-OFF operation
	Condenser fan motor	OFF when the compressor is OFF
	Evaporator fan motor	High-Low switching

- \*1 Energy-saving control applicable to the frozen mode in DTMS  $\, \mathbb{I} \,$
- \*2 Operating range for DTMS I : -1.0°C≦SP≦+30.0°C
- \*3 The unit operation is different from normal operation under DTMS operation. But it is not abnormal. Under nomal operation (without DTMS), the compressor is always ON and the evaporator fan motor is always High

### **Special instruction for DTMS function**

1) "1" or "2" is displayed in LCD screen during DTMS operations

# Example of screen indication 0.2 LED 0.2 LED 1 indicates DTMS I Example of screen indication 0.2 LED 1 indicates DTMS I 2 indicates DTMS II

### 2) Operation control

DTMS is not activated for the following cases even if DTMS is set to ON (dFLt)

- 1) During dehumidification operations
- 2) When USDA is set to ON
- 3) During pull down operations
- 4) During defrosting operations
- 5) During heating operations
- 6) Out of in-range

- 7) During automatic PTI
- 8) During high-load operations (chilled mode only)
  - · When there is a huge gap between SS and RS
  - When the compressor's ON-OFF switching cycle becomes short
- 9) When protection devices are activated

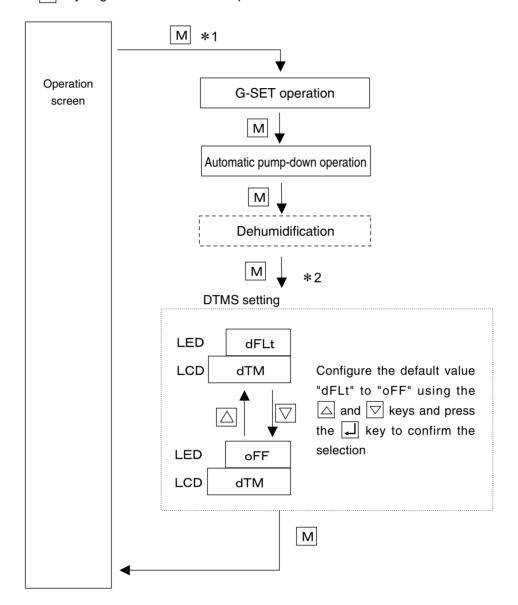

### 3) Cancellation of DTMS operation

When DTMS function is unnecessary for some transportation, cancel the operation in accordance with the procedures described in the next page. But DTMS function is automatically switched to ON (dFLt) at the completion of the PTI mentioned below

1) When F-PTI is completed 2) When Chilled PTI is completed 3) When Frozen PTI is completed

### Setting method for DTMS operation cancellation

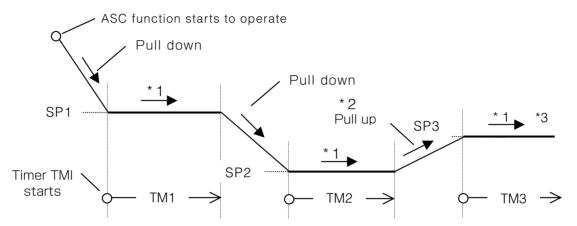

- \*1 Press and hold the M key until the DTMS setting screen is displayed
- \*2 When the DTMS setting screen is displayed, select "oFF" using the △ and ▽ keys and press the ∠ key to confirm the selection
- \*3 Press the  $\boxed{\mathrm{M}}$  key to go back to the normal operation screen

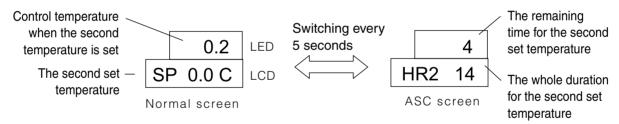

### 5.6 Automatic Setpoint Change: ASC (optional) ASC function

It is necessary to change the set temperature over time for some types of cargoes. ASC function can specify the set temperature and its duration

For example, as shown below, ASC function allows the set temperatures to change automatically by specifying in advance the first set temperature (SP1) and its duration (TM1), the second set temperature (SP2) and its duration (TM2), the third set temperature (SP3) and its duration (TM3) amid the pull down and the pull up operations. For some types of cargoes, dehumidification control settings are configured as well.

\*1 ASC screen and the normal screen switch to each other every 5 seconds during the in-range control In the following example, the second set temperature SP2 (0.2°C) and its duration TM2 (14Hr)

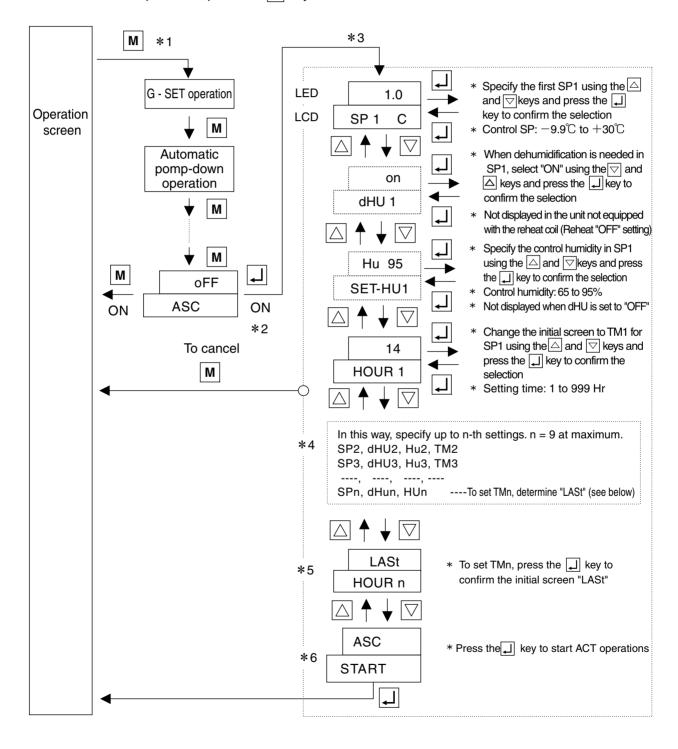

- \*2 The temperature inside is raised gradually (0.5°C/Hr) to prevent rapid temperature rise during the pull up operation
- \*3 Up to 9 patterns are available for setting temperatures (up to 8 for setting time). There is no duration limit for the last set temperature

### Special instruction for ASC operation

- 1) It is impossible to change the set temperature and the set duration during ASC operation. To change the settings, configure ASC settings to "OFF" and "ON" again.
- 2) When the power is turned off (unit off) during ASC operation, ASC operation restarts at next power-on
- 3) The following items are recorded as event log ASC "ON"/ "OFF", SP1, TM1, dHU1 "ON"/ "OFF", RH1, SP2 ----, SP3 ---
- 4) The last set temperature is displayed on the modem. The settings cannot be changed via the modem
- 5) Cancellation of ASC operation
  ①When configuring ASC to "OFF" ②When F-PTI is completed ③When Custom PTI (Chilled & Frozen) is completed

### **Setting ASC function**

- \*1 When the unit is running, press and hold the M key until the ACS setting screen is displayed
- \*2 When the ACS setting screen is displayed, select "ON" using the △ and ▽ keys and press ↓ key to confirm the selection
- \*3 Specifying the set temperature (SP1 for first item)  $\Rightarrow$  moving to the next item using the  $\boxed{\nabla}$  key  $\Rightarrow$  dehumidification control (dHU1) on/off setting  $\Rightarrow$  control humidity HU 1% setting
  - ⇒ TM1 (Hr) setting
- \*4 Specifying SP2, SP3.....SPn. n=9 at maximum
- \*5 To determine TMn for the last SPn, press the ☐ key to determine the initial screen "LASt"
- \*6 To start ASC operations, press the ☐ key in ASC START screen

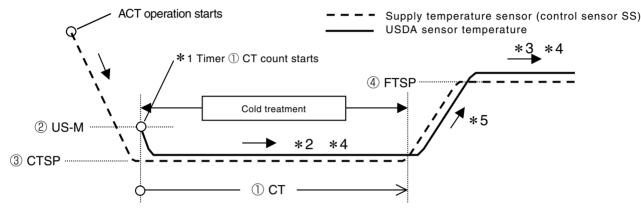

### 5.7 Automatic Cold Treatment: ACT (Optional) ACT function

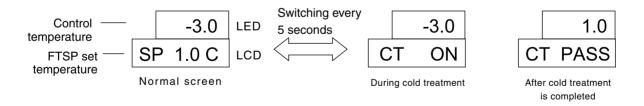

When cold treatment is completed during USDA transport (when the standard period has passed with the standard pulp temperature kept equal to or less than the base temperature), ACT function switches the temperature to the preset temperature automatically to continue the operation

To activate ATC, the following 4 items must be set

1	Cold treatment period (day)	CT
2	Maximum pulp temperature (°C)	US-M
3	Set temperature during cold treatment (°C)	CTSP
<b>(4)</b>	Set temperature after cold treatment is completed (°C)	FTSP

- \*1 When all USDA sensor temperature has fallen to equal to or cold treatment pulp temperature (US-M), the timer for cold treatment period (CT day) starts to count.
- \*2 When the temperature exceeds US-M during cold treatment, which results in data logged, CT counting is cancelled. When the temperature falls to equal to or below US-M again, counting restarts to recount cold treatment days (CT day).
- \*3 After cold treatment is completed, the operation starts at FTSP setting temperature.
- \*4 CTSP and FTSP can be changed during ACT operations (CT day and US-M cannot be changed)
- \*5 The temperature inside is raised gradually (0.5°C per hour) to prevent rapid temperature rise
- ACT screen and the normal screen switch to each other every 5 seconds during ACT operations

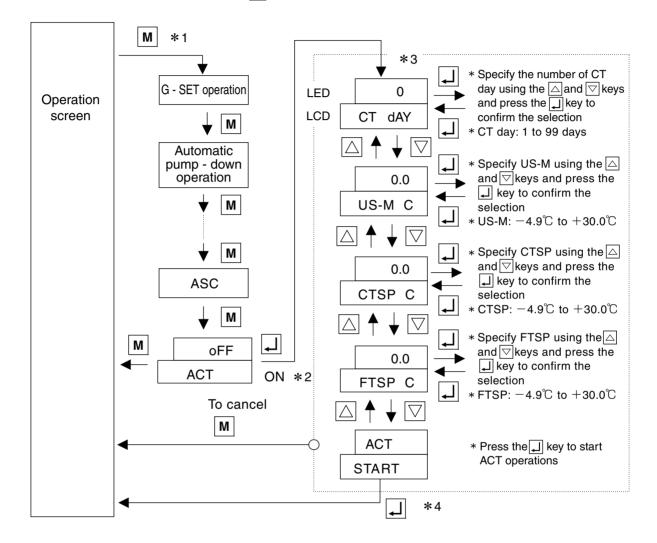

### Special instruction for ACT function

- 1) Cancellation of ASC operation
  - 1) When ASC is set to "OFF" 2) When F-PTI is completed 3) When Chilled PTI is completed
  - 4) When Frozen PTI is completed
- 2) Power off (unit off) during ACT operation and operations when restarting

Stop time	ACT operation when restarting	
Less than 1 hour ACT operation continues		
1 hour or more to less than 48 hours	CT counting is reset and ACT operation continues	
48 hours or more to less than 72 hours	ACT operation cancelled (can run at set temperture FTSP)	
72 hours or more	ACT operation cancelled	

### **Setting of ACT function**

- \*1 With the unit running, press and hold the M key until the ACT setting screen is displayed
- \*2 When the ACT setting screen is displayed, change "OFF" to "ON" using the △ and ▽ keys and press the ⊸ key to determine the selection
- \*3 Specifying the number of CT day for first item  $\Rightarrow$  moving to the next items using the  $\bigcirc$  key  $\Rightarrow$  configuring US-M, CTSP, and FTSP in order.
- \*4 To start ACT operations, press the key in ACT START screen

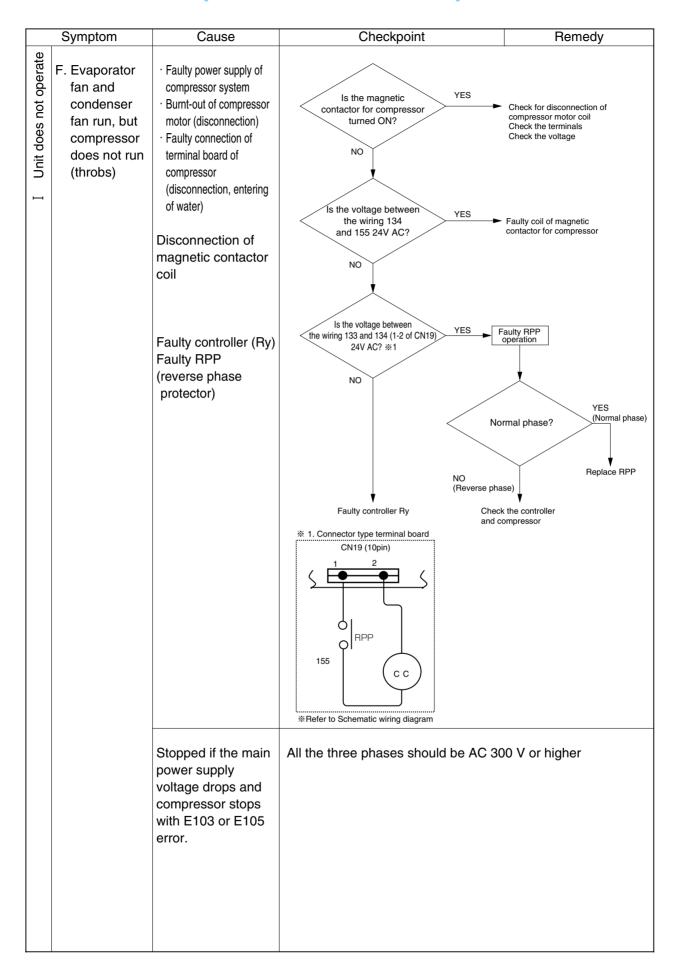

### 6. TROUBLESHOOTING

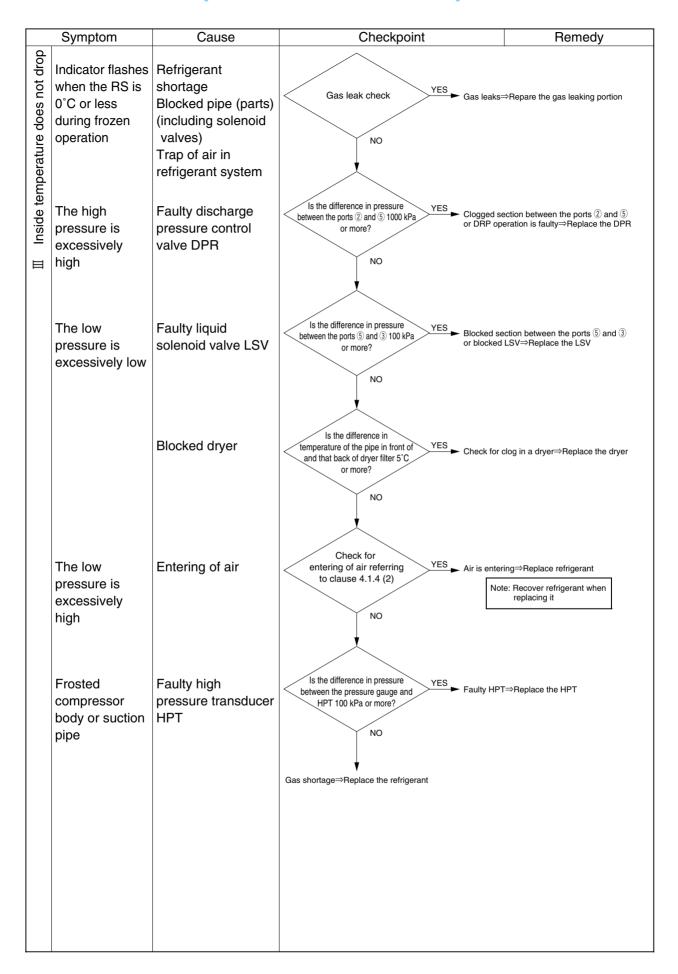

### 6.1 Refrigeration system and electrical system

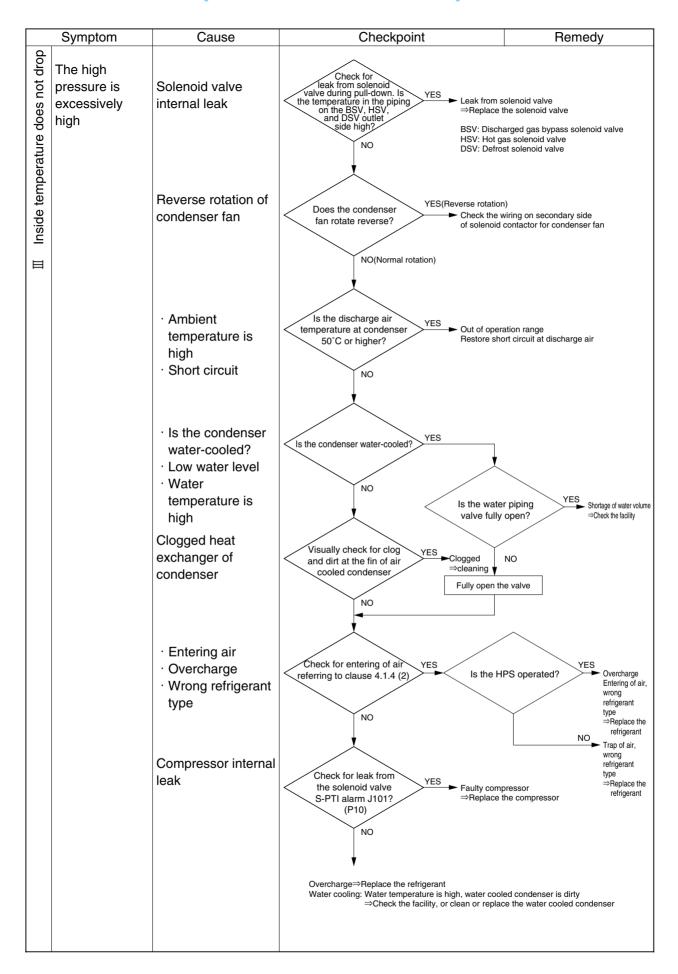

If the unit does not work properly, refer to the following table to find causes of trouble and provide appropriate measures.

	Symptom	Cause	Checkpoint	Remedy

#### 6.2 Alarm codes on electronic controller

If any alarm occurs, search its cause and repair it referring to the following table.

Be sure to check the connectors in the electronic controller as the poor contact of them may cause the controller alarm codes.

arm code	Content  The high procesure switch (HPS) contect is open	Possible cause/checkpoint
F101	The high-pressure switch (HPS) contact is open	HPS circuit check · Broken lead wire

#### 6.4 Diagnosis based on the recording chart

Set temperature
-----------------

0°C

Occurrence read out from the recording chart Defrosting is periodically executed by the timer

Abnormal content and abnormal point Normal

#### Set temperature

0°C

Occurrence read out from the recording chart The recording paper is not properly fed

because the chart nut which retains the recording chart is loose.

(left side)

Abnormal content and abnormal point

Tighten the chart nut, then it will return to

(Right side)

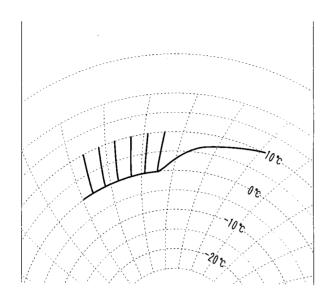

Set point temperature

Occurrence read out from the recording chart

When the moisture in the cargo is excessive, the cooling capacity becomes insufficient during pull-down operation since frosting occurs excessively. Since the temperature rises before reaching the set point temperature, defrosting is repeated at outside of the in-range temperature.

Abnormal content and abnormal point

The operation is not abnormal. Until the amount of the frost on the evaporator is to be reduced, defrosting with the frost detection is repeated. In 2 to 3 days, defrosting interval will return to normal.

#### Set temperature

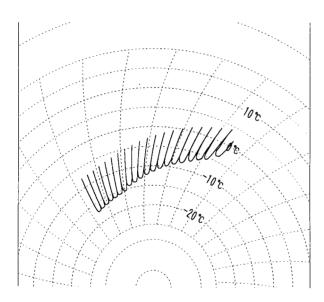

0°C

Occurrence read out from the recording chart
Though the temperature record is normal, the

Though the temperature record is normal, the temperature rapidly rises.

#### Abnormal content and abnormal point

The compressor stops due to malfunction or the fusible safety plug is molten.

#### Set point temperature

- 18°C

Occurrence read out from the recording chart

Though defrosting is periodically executed, the inside temperature gradually rises.

#### Abnormal content and abnormal point

Due to the insufficient cooling capacity, the inside temperature rises.

- · Refrigerant amount is short due to leakage.
- $\cdot \, \text{Compressor valve is broken}.$
- Expansion valve or liquid solenoid valve are cloqued.
- · High pressure rises due to shortage of air flow rate of the condenser, etc.

# 100

#### Set temperature

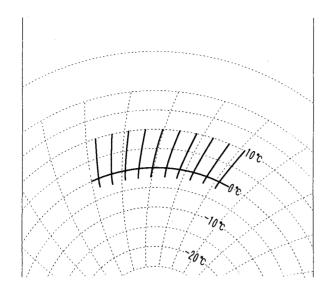

- 18°C

Occurrence read out from the recording chart

The recorder temperature suddenly varies.

#### Abnormal content and abnormal point

The connector in the temperature recorder is in poor contact.

#### Set point temperature

0°C

Occurrence read out from the recording chart When defrosting, the inside temperature temporarily drops.

#### Abnormal content and abnormal point

Since the liquid solenoid valve is not closed, pump-down operation before defrost starts is not performed, and cooling operation continues with the evaporator fan stopped. The normal operation starts 2 min. after defrosting has been terminated forcibly, but the evaporator is still cold.

#### 6.5 Emergency operation

#### 6.5.1 Emergency operation of controller

In case of the controller malfunction, emergency operation can be executed by using emergency operation kit.

- O Short-circuit connector ... Installed in front of the controller inside the control box
- Emergency magnet ... (Part No. 1896110)

#### (2) On-site work

The following works are required for emergency operation.

- 1) Wiring change for short circuit operation
  - 1) Wiring change for cutting off the power to CPU board
  - 2) Wiring change for making the forced running of Compressor, Condenser Fan and Evaporator Fans.
    - \* Install the short-circuit connector in front of the controller.
    - \* For the details, refer to the clause 6.5.2 "Short Circuit Operation"
- 2 Opening adjustment of electronic expansion valve
  - \* The emergency magnet is used to adjust the opening.
  - \* For the details, refer to the clause 6.5.3 "Opening Adjustment"
- 3 Suction Modulation Valve opening adjustment for full opening.
  - \* Use Emergency Magnet for full the opening.
  - \* For details, refer to "Adjustment in fully open condition" in section 6.5.4.

#### (3) Operating condition at emergency

Temperature can not be controlled. Turn the circuit breaker <u>on or off</u> to maintain the target temperature.

Mode	Available function of protection devices	Operating condition of unit
Cooling operation	RPP : Reverse phase protection device HPS : High pressure switch CTP : Compressor thermal protector	<ul> <li>Compressor runs continuously.</li> <li>Evaporator fan runs at low speed continuously.</li> <li>Condenser fan runs continuously.</li> <li>Electronic expansion valve operates with fixed opening.</li> <li>Suction modulating valve operates with full opening.</li> </ul>
Heat operation		<ul><li>Compressor stops.</li><li>Evaporator fan runs at high speed continuously.</li><li>Condenser fan stops.</li></ul>

#### 6.5.2 Short circuit operation of controller

	Cooling operation	Heating operation

	CN-C1 CN-C2					

#### 6.5.3 Emergency operation of electronic expansion valve

If the controller does not work or the electronic expansion valve coil has failed, the emergency magnet can be used to fully open the electronic expansion valve.

- ①Disconnect the CN11 connector from the power supply I/O board of the controller to forcibly turn OFF the power supply to the electronic expansion valve.
- 2Prepare the emergency magnet.
- ③Remove the electronic expansion valve coil.
- ⑤Turn the emergency magnet in the OPEN direction (clockwise) in the same place.
  - →Ensure that the valve is fully open. (There is a small click sound.)
- (6) Turn 90° to 180° counterclockwise the emergency magnet in the same place.

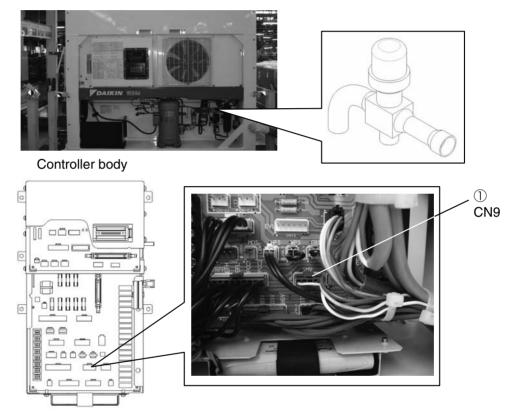

To shorten the operation time, it is recommended that the opening be adjusted. However, slightly close the opening if there is a frost around the compressor due to the operation in wet conditions or the degree of superheat is small.

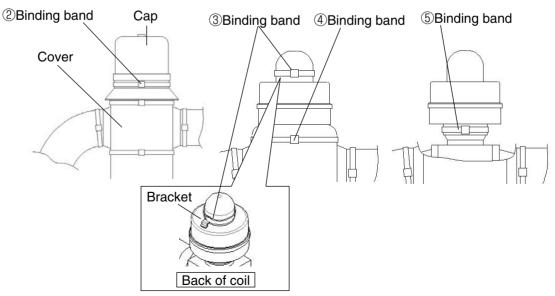

#### 6.5.4 Emergency operation of suction modulation valve

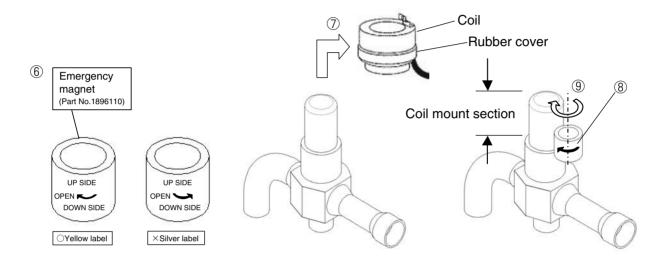

If the controller does not work or the suction modulation valve coil has failed, the emergency magnet can be used to fully open the suction modulation valve.

- ①Disconnect the CN9 connector from the power supply I/O board of the controller to forcibly turn OFF the power supply to the suction modulation valve.
- ②Remove the binding band of the suction modulation valve cap, and then remove the cap.
- ③Remove the binding band from the upper section of the suction modulation valve coil.
- ④Remove the binding band of the suction modulation valve cover to expose the lower section of the suction modulation valve coil.
- ⑤Remove the binding band from the lower section of the suction modulation valve coil.

- **6** Prepare the emergency magnet.
- ②Remove the suction proportional coil. (Removed together with the coil's lower rubber cover)
- ®Bring the emergency magnet into contact with the coil mount section of the suction modulation valve with indication "UP SIDE" located upward. (The emergency magnet is magnetically attracted to the coil mount section by the driving magnet located inside.)
- 9Turn the emergency magnet in the OPEN direction (clockwise) in the same place.
  - →Ensure that the valve is fully open. (There is a small click sound.)

#### **Attention**

●The silver label is not used. (The silver labels are used for LXE10E-A, 10E-1 and 10D.)

#### 7. APPENDIX

#### 7.1 Standard tightening torques for bolts

	Bolt size	Main part	Tightening torque

Conversion rate :  $1 \text{kgf/cm}^2 \cdot \text{G=}98.0665 \text{kPa}$ 

1kPa = 0.145PSIG

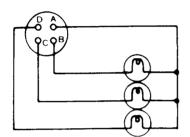

#### 7.8 Electric wiring

#### pilot lamps and monitoring circuit (option)

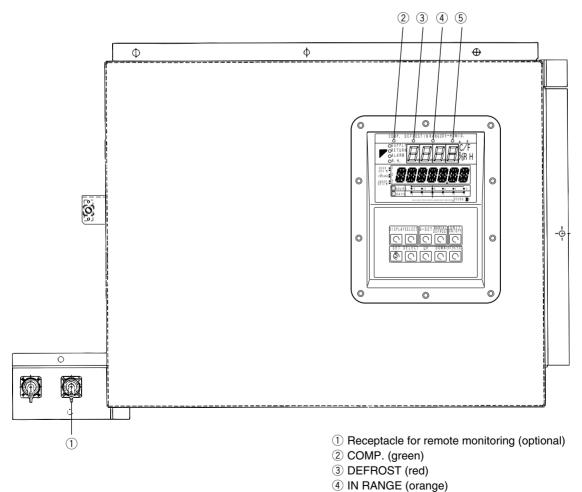

Four pilot lamps which indicate operating mode are mounted on the controller in the control box.

Pilot lamp	Color	Operating condition
COMP.	Green	The compressor is running
DEFROST	Red	The unit is under defrosting operation
IN RANGE	Orange	The inside temperature is within the proper range (within±2.0°C (±3.6°F) of the preset temperature).
DE-HUMID.	Yellow	The unit is set to the dehumidification control operation. (optional)

Also, the receptacle for remote monitoring of the indicator lamp can be optionally attached. The connection is as shown below.

- A: Farth
- B: Compressor (green)
- C: Defrost (red)
- D: In range (orange)

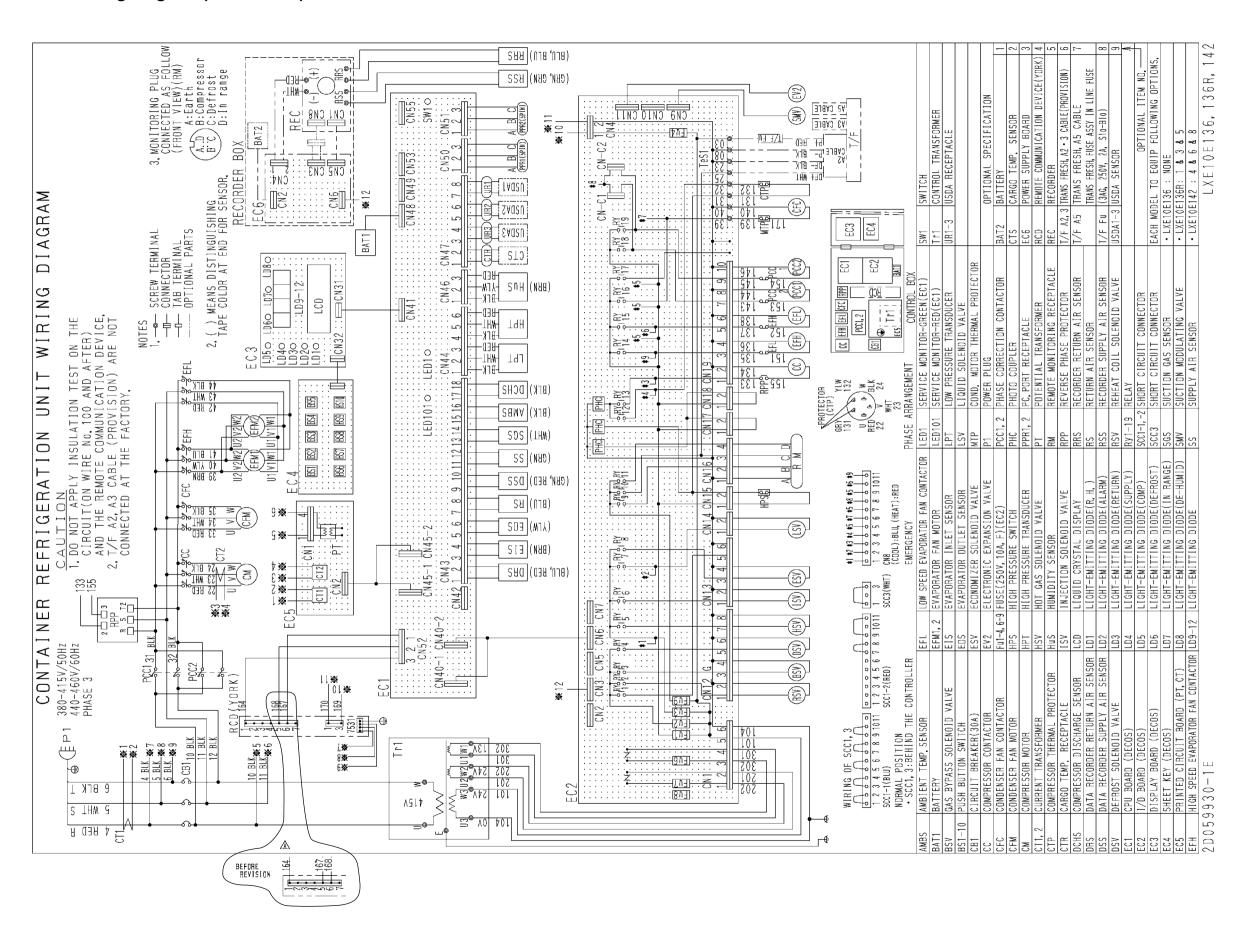

5 DE-HUMID. (yellow)

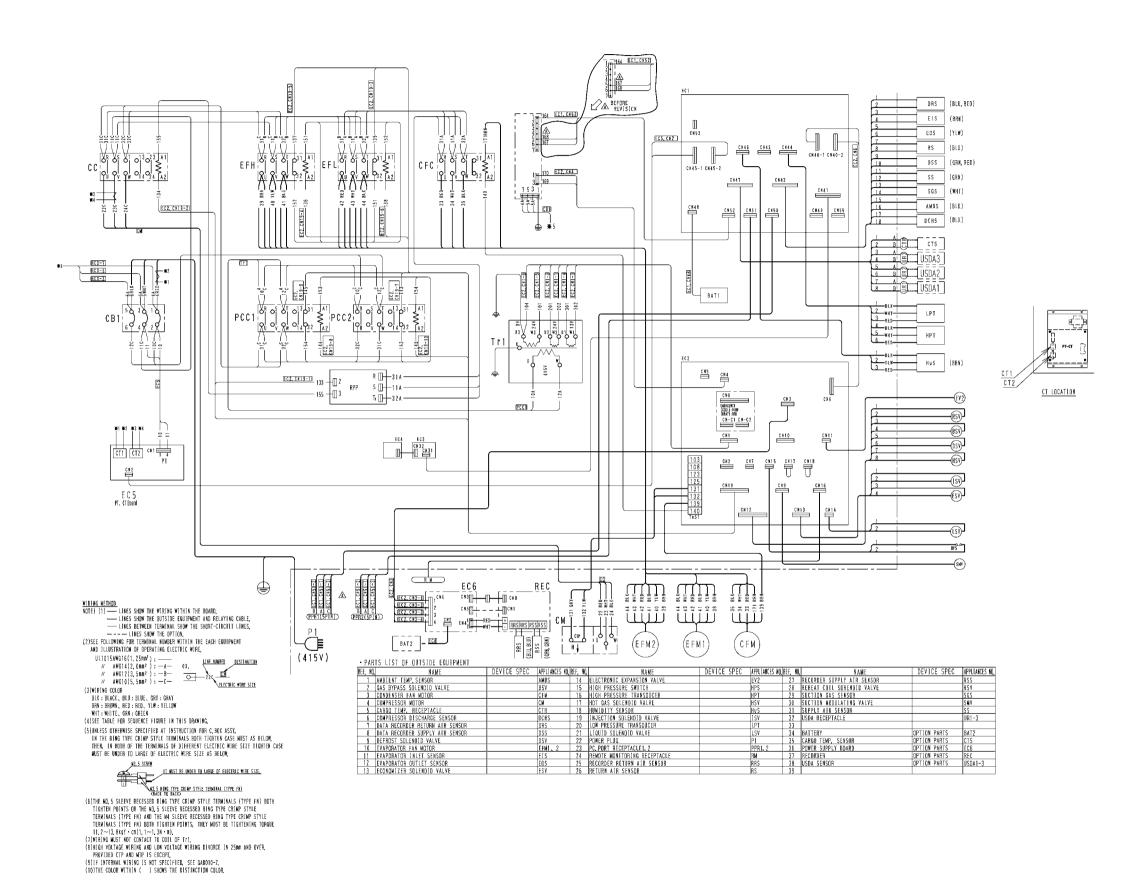

#### 7.9 Fuse protection table

	Protection of:
Fuse 1 (250V, 10A)	High pressure switch (HPS)
	Compressor contactor (CC)
	• Evaporator fan contactor high speed (EFH)
	Evaporator fan contactor low speed (EFL)
	Condensor fan contactor (CFC)
	Compressor terminal protector (CTP)
	Phase correction contactor (PCC1, PCC2)
Fuse 2 (250V, 10A)	Gas bypass solenoid valve (BSV)
	Defrost solenoid valve (DSV)
	Reheater solenoid valve (RSV) for dehumidification
Fuse 3 (250V, 10A)	Hot gas solenoid valve (HSV)
	Liquid solenoid valve (LSV)
	Injection solenoid valve (ISV)
	Economizer solenoid valve (ESV)
Fuse 4 (250V, 10A)	Modem
Fuse 6 (250V, 10A)	Recorder
Fuse 7 (250V, 10A)	CPU board
	Electronic expansion valve (EV)
	Suction modulating valve (SMV)
	LED display
	• LCD screen
Fuse 8 (250V, 10A)	Spare
Fuse 9 (250V, 10A)	Remote monitoring receptacle (RM)
